AC2 TWO DOOR CONTROLLER KIT

The AC2 is a powerful networked 2-door controller kit that supports up to 126 doors. It comes with one controller, two proximity readers, configuration software and a USB configuration cable. The controller has 8 supervised inputs, 8 programmable outputs and a unified database.

The controller is also compatible with a variety of available options including voice entry, wireless locksets, biometric tecnology, proximity devices and elevator restrictions.

The two proximity readers can be installed on an interior or exterior wall or cabinet, a window mullion, or on a metal door frame. Their unique design and construction ensures a great performance even under potentially adverse environmental conditions.

Interlocking Doors

Monitors and controls access to secured/retricted areas by ensuring that one door is locked before the next one is unlocked.

Delayed Released

Forces a user to press an exit bar or button in order to request the release of a door, allowing security to responde before releasing the door.

Emergency Lock Down or Evacuation

Enables the user to activate an emergency lock down or evacuation by swipping an access card multiple times in order to unlock or look all doors.
