

FLUSH-MOUNT BOX

Use this mounting box to install the 2N® IP Style into a wall. The flush-mounting box has a special elevating function. It helps you align the intercom with a wall's surface so that only the correct part of the intercom shows. In other words, a hole in the wall which is too deep won't ruin the whole installation. The box has a unique tilt-out mechanism which gives you plenty of room to work with cabling.
