ELITE SCREENS

Sleek EDGE FREE® Design

Optional LED backlight kit

The Aeon Series is a fixed frame projection screen that uses Elite's EDGE FREE™ technology. EDGE FREE™ means that there is no external framework (edge) bordering the material as seen in traditional frame-screens. The design utilizes an internal frame with wrap-around material that resembles a giant size flat panel display. The Aeon includes a black velvet trim edge strip as an option to further enhance the overall appearance.

Front Projection Screen Material Options:
CineWhite (matte white) – Broad light dispersion through diffusion uniformity, black and white contrast and true color rendition. Gain 1.1/180º viewing angle. Recommended for environments with controlled lighting.

isf ® **CineGrey 3D (ambient light rejecting)** – Ambient Light Rejecting material for environments with minimal control over room lighting. ISF Certified for color accuracy. Gain 1.2/90º viewing angle.

Design and Installation:
• Aluminum light-weight split-frame design
• Stretches over frame for a permanent tight-tensioned flat surface
• Easy to assemble and install in minutes
• Smaller footprint maximizes viewing area
• EDGE FREE® or install ultra-thin velvet tape trim
• Wall mount brackets slide ensuring the frame is properly centered
• Optional LED backlight kit with IR remote (sold separately)

Model Number	Nominal Diagonal	Aspect Ratio	Viewable Height (in)	Viewable Width (in)	Screen Material	Gain
AR100WH2	100"	16:9	49.2	87.3	CineWhite	1.1
