

# Keyscan Aurora

## Access Control Software

## New version 1.0.24 is available, with more features and enhanced capabilities.

More than 40 new improvements have been made enhancing services including: Aurora Client; Aurora Web Client; Aurora Communications; E-Plex Communications; Virtual Communications; Aurora SDK and Disaster Recovery.

### **Aurora Client:**

- Ability to set auto purge of the transactions, system logs, and visits older than 2 years when scheduling database backup.
- Option to include Person ID and Person Custom Unique Identifier fields to Output Module for integration purposes.
- E-Plex Gateways to allow only one gateway to be in join mode at a time.

### **Other Aurora enhancements include:**

- Output module will now output software generated transactions (eg: Communications Pre-Alert, Communications Failure & Communications Restored).
- Improved E-Plex lockdown for individual locks.
- Updated to latest Log4net version
- Improved disaster recovery where database cannot be backed up because of the wrong message that the agent is not running.

A total of more than 40 new enhancements and improvements have been made.

All Aurora users are encouraged to update your software to the most recent version to ensure you continue to utilize all updated features and functions..
