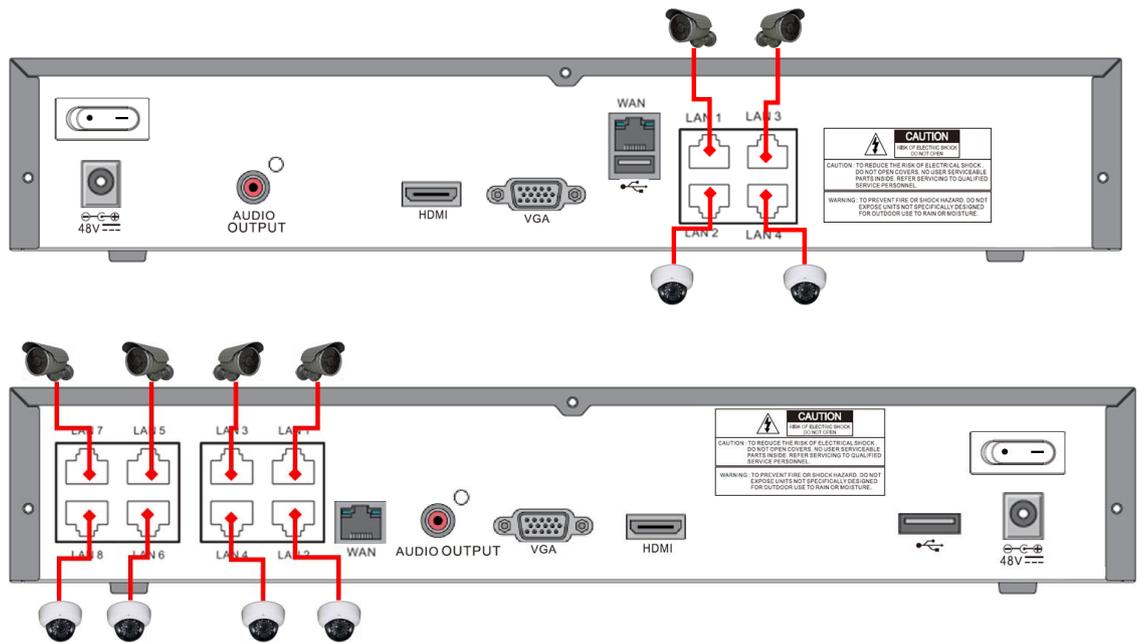

Figure 2.5.1.1 IP Camera Connection Diagram (N4NSL, N8NSL)

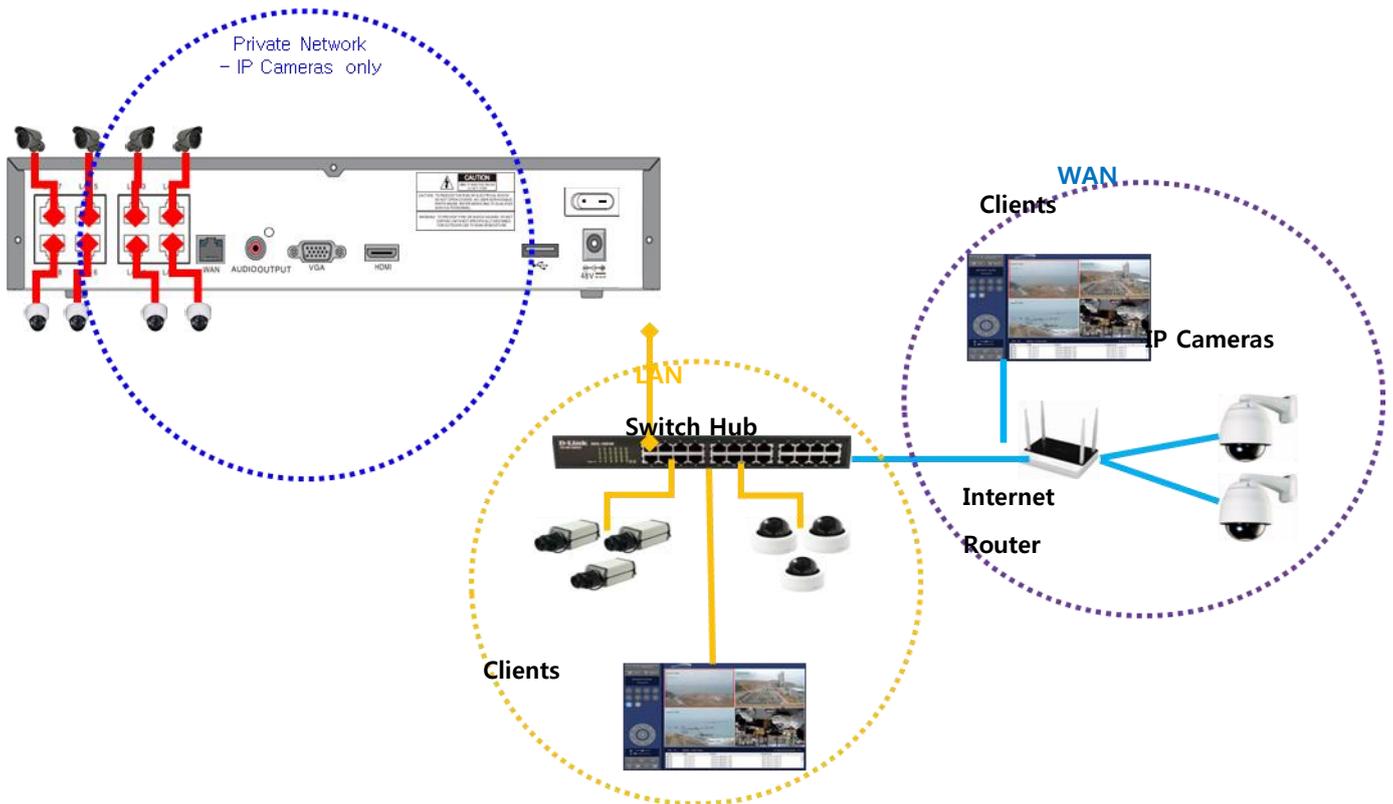

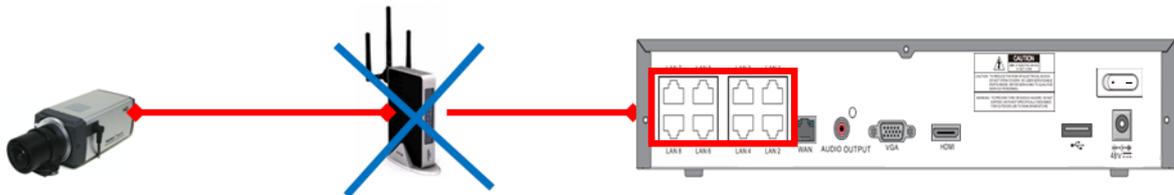

Figure 2.5.1.2 IP Camera Connection Diagram (NSL Series)

### Table 2.5.1. Factory Default of the IP Camera

The following IP Camera settings are recommended for optimal connection with the NSL Series

Setup Items	Default	Description
Network Type	DHCP	The IP Camera must act as a DHCP client for the "Plug and Play".
Encoding Type	CBR	The "CBR" is recommended because of the internal buffer design of the NSL Series
Resolution	1280x720	The maximum performance of the N8NSL is 1080p@240fps or 720p@240fps. To get higher frame rates per channel, 1280x720 is the recommended resolution.
Frame Rate	25fps	The maximum performance of the N8NSL is 720p@240fps. Therefore 30fps per channel is recommended. (30fps x 8 = 240fps)
Bit Rate	2Mbps	The maximum throughput of the N8NSL is <u>40Mbps</u> . Therefore 2Mbps per channel is recommended. (4Mbps x 8 = 32Mbps)
Sub Stream	CIF 512Kbps	For "Dual Streaming", the sub stream should be turned on. And for the proper streaming through the WAN connection, CIF@512Kbps or lower bitrates per channel is recommended.

- The NSL Series features a "Plug and Play" function with a PoE Switch.
- The "Plug and Play" functionality requires the IP Camera to be in DHCP mode.
- The NSL automatically assigns an IP Address to the IP Camera. (10.20.30.11 ~ 10.20.30.254)
- The NSL models will automatically map the camera on the PoE Port to the corresponding NVR channel number.
- The NSL PoE Port maximum power consumption
  - [N4NSL – 57.6Watt, N8NSL-96Watt]

**Figure 2.5.1.2.** Incorrect connection with the PoE Ports

With the NSL Models, it is prohibited to connect a router to the POE Ports to connect the IP Camera, the NSL will not be able to find and connect to the camera. The LAN Port can be connected to a router, but not the PoE Ports.

## 2-6. IP Camera SETUP (through Web Viewer page)

NSL Series allow remote access to the IP Cameras through an "IP Camera Setup" menu.

The PC Web Client features the "IP Camera Setup" menu that can be accessed remotely.

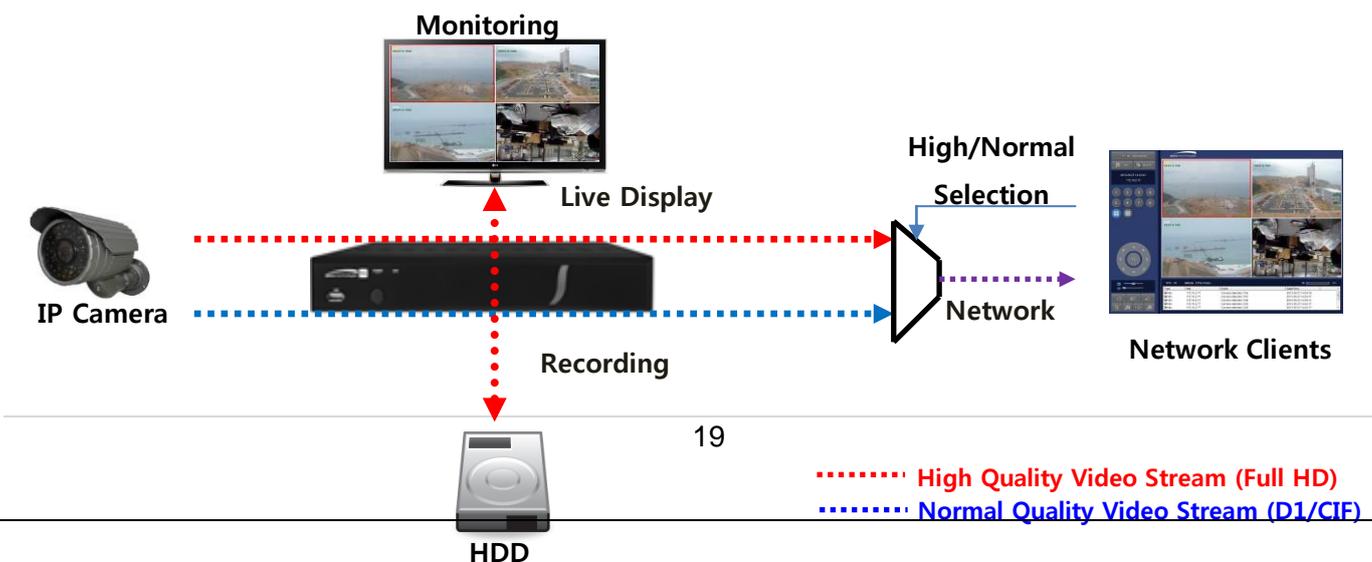

- ① Click the mouse right button
- ② Select "IP Camera Setup".
- ③ Select Channel Number.
- ④ It launches the camera's web setup page.

In order for the web pages to launch from the "IP Camera Setup" menu when accessed from the WAN, Ports 59011 to 59254 on the router must be port forwarded to the NVR. The local address of the NVR can be found in the system information

## 2-7. Dual Streaming

- High Quality (Main Profile) Video Stream is used for both Recording and Live Display.
- High Quality (Main Profile) Video Stream can be viewed through the network, when selected.
- Normal (Secondary) Quality Video Stream is used by default when viewing through the network.

## 4-6-1. Network Types

### 4-6-1-1. DHCP

An IP address is automatically assigned by the DHCP server, which automatically assigns the IP address and other parameters to new devices.

### 4-6-1-2. STATIC

IP address, Subnet Mask, Gateway, and DNS are manually assigned by the user.

- IP ADDRESS: The fixed IP address of the NSL unit.
- SUBNET MASK: The subnet mask for the LAN.
- GATEWAY: The IP address of the Gateway.
- DNS (PRIMARY) The primary address of Domain Name Server
- DNS (SECINDARY): The secondary address of Domain Name Server

#### NOTE

Unless DNS is properly set, the DDNS and the e-mail features will not work.

## 4-6-2. DDNS

DDNS (Dynamic Domain Name System) allows a DNS name to be constantly synchronized with a dynamic IP address. It allows using a dynamic IP address to be associated with a static domain name.

Once the setting is completed, the DDNS address will be:

<http://hostname.ddns.specoddns.net>

For example, if you enter the host name as “NS”, then the address will be:

<http://NS.ddns.specoddns.net>

Select NETWORK>DDNS. The menu displays as below.

### 4-6-3. Network Port and Web Port

Connecting NSL through a common IP sharing device, each NSL must be assigned a unique TCP port number for access from outside the LAN. This port number is displayed on NETWORK>NETWORK PORT Setup MENU.

**NOTE:**

If you access the NSL only within the same LAN, the TCP port number does not need to be changed.

#### Network access beyond a router

To access NSL beyond a router (firewall), you must open the proper TCP ports for live/playback streaming, for commands, for remote backup, and for audio streaming. If these ports are not opened properly, you can't access the NSL beyond a router.

- **For live/playback streaming, for commands, for remote backup:** Open the port number on NETWORK>NETWORK PORT menu. The default port number is 5445.
- **For bi-directional audio:** Open the port number on NETWORK AUDIO PORT. The default port number is [NETWORK PORT number + 1].
- **For web-viewer downloading and remote firmware upgrading:** Open the port number on NETWORK>WEB PORT menu. The default port number is 80.
- **For IP Camera Setup through web viewer:** Forward ports 59011 ~ 59254 to the NVR.
