Mobile credentials merge security and convenience

Keyscan Mobile Credentials is a cloud-based, BLE (bluetooth low energy), electronic credential delivery app. It is designed to merge security and convenience for user access at all authorized entry and exit points equipped with Keyscan K-SMART3 or K-PROX3B series mobile-ready readers throughout a facility.

Simple enrollment - bring your own device
Using Keyscan Aurora 1.0.16 (or later) or Keyscan LUNA access control management software, system administrators can issue secure electronic credentials directly to an authorized user's registered iOS or Android device.

The mobile app is downloaded and registered to a user's device. The user then receives a mobile credential key code by email from the Keyscan system administrator. This code is entered into the app and the assigned mobile credential is downloaded directly into the app and ready for use.

Mobile credentials offer secure convenience:
- Can be used to augment smart cards, fobs or transmitters allowing a gradual transition from traditional card/fob reader and credential environments
- iOS users, can utilize widgets to activate their mobile credential
- iOS users can mark one mobile credential as a 'favorite'to save time by automatically being selected when the app is opened and ready to be presented to a K-SMART3 or K-PROX3B reader.
- iOS users can also utilize Siri to voice activate the app. (Requires iOS 13.0 or higher and Shortcuts App)

Smart access control means secure mobile solutions.

Key benefits of Keyscan mobile credentials

- Non-intrusive with simple one-time mobile device registration.
- Mobile credentials remain secure and protected behind password or biometric security of a mobile device.
- No on-boarding process is necessary to begin using Keyscan mobile credentials.
- Four adjustable BLE reader ranges available. Default BLE range is short range and is ready to use. Additional BLE ranges are medium, long and maximum. (Requires programming card, sold separately).
- No manufacturer 'cloud' portal account required.
- User can store up to 10 mobile credentials on a single device.
- Mobile credentials available in sets of 10, 25, 50 and 100.
- Unique site code also available.
- Manage user data, purchase and distribute mobile credentials directly through Keyscan Aurora Version 1.0.16 or higher or Keyscan LUNA Version 1.0.0.0 or higher (internet connectivity and email client also required).
- Now available through distribution.

How the Keyscan mobile application works

Step 1: Download and register your app

Step 2: Receive your mobile credential by email[†]
[†] Credentials can be received by email or entered manually

Step 3: Begin using your mobile credential

Standard Keyscan Mobile Credentials can be purchased through Distribution. Contact your preferred distributor for details.

Keyscan Mobile credentials made specifically for your Keyscan Aurora software platform are also available. These require your RSA Key generated by Aurora software. Contact dormakaba Canada mobile credential administrator at 1 888 539-7226 for details.
