

Mini door entry monitor with handset Art. 6701W, 6701W/BM, 6701W/8

Warning

Intended use

This Comelit product has been designed and manufactured for use in the creation of audio and video communication systems in residential, commercial, industrial and public buildings.

Installation

All activities connected to the installation of Comelit products must be carried out by qualified technical personnel, with careful observation of the indications provided in the Manuals / Instruction sheets supplied with those products.

Wires

Disconnect the power supply before carrying out any operations on the wiring.

Use wires with a cross-section suited to the distances involved, observing the instructions provided in the system manual.

We advise against running the system wires through the same duct as power cables (230V or higher).

Safe usage

To ensure Comelit products are used safely:

- carefully observe the indications provided in the Manuals / Instruction sheets,
- make sure the system created using Comelit products has not been tampered with / damaged.

Service

Comelit products do not require maintenance aside from routine cleaning, which should be carried out in accordance with the indications provided in the Manuals / Instruction sheets.

Any repairs must be carried out:

- for the products themselves, exclusively by Comelit Group S.p.A.,
- for the systems, by qualified technical personnel.

Disclaimer

Comelit Group S.p.A. does not assume any responsibility for

- any usage other than the intended use
- failure to observe the indications and warnings contained in this manual.

Comelit Group S.p.A. reserves the right to change the information provided in this manual at any time and without prior notice.

Door entry monitor description

Wall-mounted door entry monitor with 4.3" / 16:9 colour screen and handset. Allows brightness and colour control, plus adjustment of the ringtone volume, which can be customised by choosing one of several different melodies. Equipped as standard with 4 soft touch buttons (8 with 6701W/8) for controlling lock-release, self activation, switchboard call and Privacy function, as well as door status indicator LEDs. Manages floor door calls as standard. Complete with 2 x 8-position dipswitches for programming the user code and button programming. The backplate for wall installation or domestic series box installation and the distribution terminal from riser art. 1214/2C are included. The door entry monitor can only be used in **2-wire Simplebus2 systems**. Dimensions (L x H x D): 175x160x22 mm.

Option of adding 4 additional buttons to Art. 6701W-6701W/BM with accessory Art. 6733W.

Item 6701W/BM is not supplied with backplate 6710.

- ▶ To increase the value, turn clockwise
- 2. Colour intensity adjustment
 - ▶ To increase the value, turn clockwise
- 3.4.3" colour LCD screen
- 4. Call volume adjustment (High / Medium / Low)
- 5. Buttons
- 6. Handset
 - ▶ Lift the handset to start communication
- ▲ Do not press and hold the audio hook while the handset is lifted
- 7. S1 microswitches for programming the user code (see paragraph "Addressing table")
- 8. S2 microswitches for button and function programming (marked with a red corner)
 - DIP 1-2-3-4 for button function programming
 - DIP 5-6 access to programming
 - **DIP 7** for power supply voltage management (default ON)
 - A S2 DIP 7 must always be set to ON, even in systems with 4888C and 4888CU (as in the factory settings)
 - DIP 8 for setting main and secondary door entry monitor (see paragraph "Main and secondary door entry monitors")
- 9. Loudspeaker volume adjustment (for setting intercom audio only)
- 10. CV5 jumper for video closure
 - In systems with more than one door entry monitor connected in cascade, only the door entry monitor furthest away must have CV5 closed
- 11. Pin for securing terminal block

Terminal block for system connection:

LL Bus line connection terminals

CFP1 CFP2 Floor door call input

Legend: buttons and indicator LEDs

Press the desired button once to activate the associated function

Wait for approximately 1 sec. before pressing the same button again. Pressing the same button several times in quick succession will cancel the command.

Description of buttons

LOCK-RELEASE

 Press the key to activate the corresponding door lock

- ACTUATOR (default*)
 - Press the key to activate the corresponding relay
- 2 SELF-ACTIVATION (default*)
 - Press the key to access real-time viewing of the camera for the outdoor entrance panel

SILENT MODE (Privacy)

Press the key to enable silencing of the ringtone on receipt of a call from the outdoor entrance panel and from the switchboard

PROGRAMMABLE BUTTONS

Applies to Art. 6701W/8

Indicator LED description

Flashing LED: incoming call

1 flash after pressing button: confirms door opening

Slow flashing: door open

Flashing LED: device in programming mode

4 flashes: system busy

Steady LED: Silent mode (Privacy) enabled

3 flashes every 5 sec.: Door Opening Upon Call (Doctor) function enabled

(*) Buttons may be programmed as:

AUTOMATIC LOCK-RELEASE ON RECEIPT OF CALL (Doctor)

See paragraph "Pressing and holding keys (disabled by default from firmware version 3.0.1 (3.2.0 for 6701W/8)"

INTERCOM

Allows a call from one internal unit to one or more internal units

- CALL TO A MAIN OR SECONDARY SWITCHBOARD
- PRIORITY CALL TO SWITCHBOARD ("PAN")
- CALL TO CARETAKER DOOR-ENTRY PHONE

Pressing and holding keys (disabled by default from firmware version 3.0.1 (3.2.0 for 6701W/8)

Pressing and holding keys adds further functions to the door entry monitor.

Carry out the procedure described below to enable - or disable, depending on the factory setting - the press and hold feature:

- \checkmark Door entry monitor in standby.
- 1. Take note of the S2 DIP-switch settings.
- 2. Enter programming mode by setting S2 DIP-switches 1, 3, 5 to ON.
- » the LED & flashes
- 3. Press 1 to enable (or press 2 to disable).
- 4. Make sure the **→**O key flashes 4 times and the confirmation tone is emitted.
- 5. Restore the initial configuration of the S2 DIP-switches.
- » LED & switches off

Once the procedure is complete, you will be able to enable the following functions:

Automatic lock-release on receipt of call (Doctor mode)

Automatic activation of the Lock-release relay on receipt of a call originating from the external unit.

▶ Press and hold (4 sec.) the programmed button to enable/disable the function.

Self Activation

▶ Press and hold (4 sec.) the programmed button to disable the function. (Enabled by default).

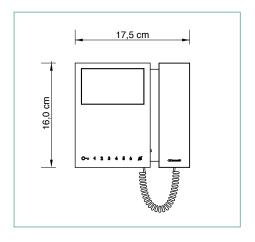

-1

Installation

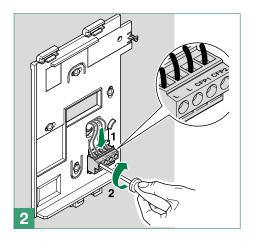

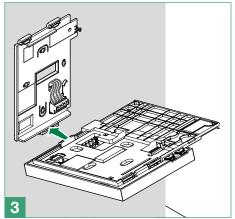

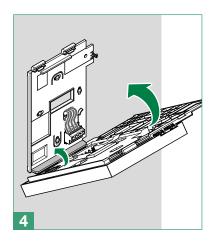

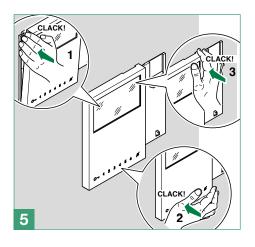

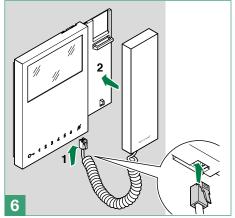

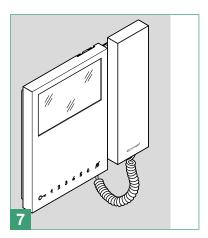

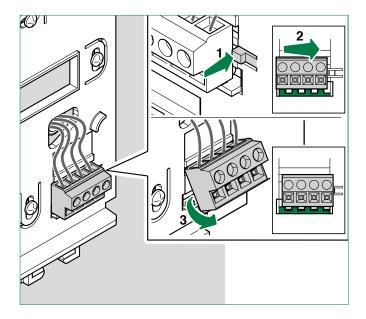

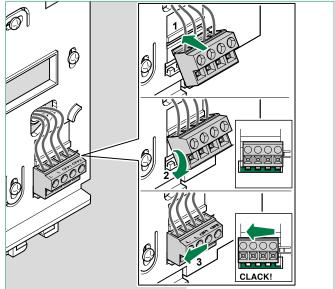

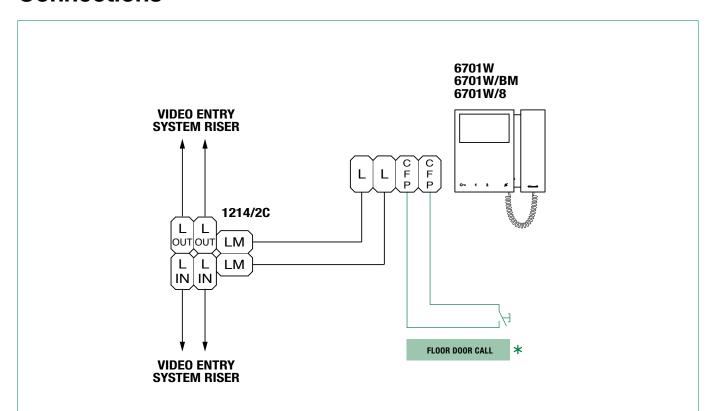

Removing/Fitting the Terminal

Connections

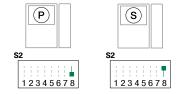

- # 20 m MAX Use shielded cable for the connection and do not route the cables in the vicinity of heavy inductive loads or power supply cables (230V / 400V).
 - Where multiple door-entry phones or door entry monitors have the same user code, connect the CFP button on one only; all the devices will ring simultaneously.

Settings

Main and secondary door entry monitors

In systems with power supply unit 1209, 1210 or 1210A, you can configure a maximum of 1 main door entry monitor, while in systems with power supply unit 4888C you can configure up to 2 main door entry monitors.

To configure the door entry monitor as **main**, set **S2**di **DIP 8 to OFF**To configure the door entry monitor as **secondary**, set **S2 DIP 8 to ON**

Button configuration

By default the buttons control the functions in A ("Standard configuration" table).

It is possible to change the default configuration of the buttons by changing the positions of S2 DIP-switches 1-2-3-4 on the rear of the door entry monitor to one of the combinations (B-P) suggested in the table. All the buttons will change function.

^{**} Pressing and holding enables / disables the function, see "Pressing and holding keys (disabled by default from firmware version 3.0.1 (3.2.0 for 6701W/8)"

Advanced configuration

If the standard configuration settings (A-P) do not reflect requirements, the buttons can be programmed differently by carrying out the steps below.

After programming, set S2 DIP-switches 1-2-3-4 (PROG) to ON. With these DIP-switch settings, the buttons manage the programmed functions.

The buttons that are NOT programmed control the functions in row A (table "Basic configuration").

Intercom call

Introduction

By "General intercom call" we mean a call from a door-entry phone/door entry monitor to the devices (in the same apartment or another apartment) identified by the call address for the apartment (user code).

By "Intercom call to selective address" we mean a call from a door-entry phone/door entry monitor to a device (or several) identified by a specific (selective) address which is different from the call address for the apartment (user code).

General and selective intercom calls CANNOT be used together on the same riser!

General intercom call: button programming

- 1. Take note of the S1 DIP-switch settings.
- 2. To enter programming mode, set S2 DIP-switch 6 to ON.
 - » the LED # flashes

Refer to the table "Basic configuration" to identify a DIP-switch combination in which the intercom function (INT or INTb) corresponding to the button you want to program appears, then set the S2 DIP-switches.

Example: For button 1= Intercom (INT) set S2 DIP-switches 1-2-3-4 as specified in row "C" in the table "Basic configuration"

4. Set the S1 DIP-switches according to the call address of the desired apartment.

See "Addressing table"

- 5. Press and release the button to be associated with the function.
 - » Correct procedure indication: the LED **▼O** flashes for a few seconds and a confirmation tone sounds.
 - √ When programming using several buttons, continue programming the next key by repeating the process from step 4 onwards.
- 6. Exit programming mode by setting S2 DIP 6 to OFF.
 - » LED **\(\omega\)** switches off

ON 12345678

- 7. Set S2 DIP-switches 1-2-3-4 to ON.
- Return S1 DIP to the original combination.

Intercom call to selective address: button programming

- 1. The steps illustrated in paragraph "Assigning a selective address" should be carried out on the devices involved in the intercom call.
- Take note of the S1 DIP-switch settings.
- 3. Exit programming mode by setting S2 DIP 6 to OFF.
 - » the LED **\(\sigma \)** flashes

- 4. Refer to the table "Basic configuration" to identify a DIP-switch combination in which the intercom function (INT or INTb) corresponding to the button you want to program appears, then set the S2 DIP-switches.
- Use the S1 DIP-switches to set the *selective* address of the device you wish to call. "TABLE B".
 - for group calls, simultaneously set the desired selective addresses (max. 3) to ON.
- 6. Press and release the button to be associated with the function.
 - » Correct procedure indication: the LED -O flashes for a few seconds and a confirmation tone sounds.
 - √ When programming using several buttons, continue programming the next key by repeating the process from step 5 onwards.
- 7. Exit programming mode by setting S2 DIP-switch 6 to OFF.
 - » LED **S** switches off

ON 12345678

- 8. Set S2 DIP 1-2-3-4 to ON.
- 9. Return S1 DIP to the original combination.

Selective intercom address

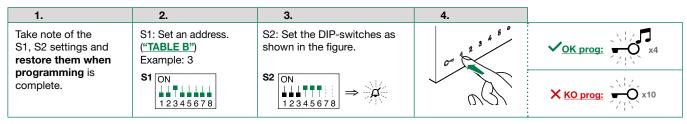

Code	S1 DIP-switch ON
1	1 ON 12345678
2	2 ON 12345678
3	3 ON 11 11 11 11 11 11 11 11 11 11 11 11 11

TABLE B									
Code	S1 DIP-switch ON								
4	4 ON 12345678								
5	5 ON 12345678								
6	6 ON 12345678								

S1 DIP-switch ON
7 ON 12345678
8 ON 12345678

Assigning selective address

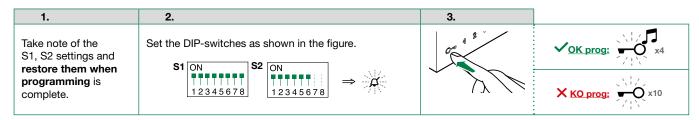

(Steps only need to be carried out for "Intercom call to selective address" programming)

Assign one of the 8 addresses available in "TABLE B" to each device involved in the intercom call.

• You can assign the **same** selective intercom address to a maximum of 3 devices.

Deleting the selective address of the door entry monitor

Generic actuator, coded actuator

Generic actuator: button programming

- 1. Take note of the S1 DIP-switch settings.
- 2. Exit programming mode by setting S2 DIP 6 to OFF.
 - » the LED **f** flashes

- 3. Refer to the table "Basic configuration" to identify a DIP-switch combination in which the actuator function (ACT) corresponding to the button you want to program appears, then set the S2 DIP-switches.
- 4. Set all S1 DIP-switches to ON.

- 5. Press and release the button to be associated with the function.
 - » Correct procedure indication: the LED **▼**O flashes for a few seconds and a confirmation tone sounds.
- 6. Exit programming mode by setting S2 DIP-switch 6 to OFF.
 - » LED 🎜 switches off

ON 12345678

- 7. Set S2 DIP-switches 1-2-3-4 to ON.
- 8. Return S1 DIP-switches to the original combination.

Coded actuator: button programming

- 1. Take note of the S1 DIP-switch settings.
- 2. Exit programming mode by setting S2 DIP 6 to OFF.
 - » the LED ## flashes

- 3. Refer to the table "Basic configuration" to identify a DIP-switch combination in which the actuator function (ACT) corresponding to the button you want to program appears, then set the S2 DIP-switches.
- 4. Set the S1 DIP-switches with the desired code, according to "Addressing table"
- 5. Press and release the button to be associated with the function.
 - » Correct procedure indication: the LED **▼**O flashes for a few seconds and a confirmation tone sounds
- 6. Exit programming mode by setting S2 DIP-switch 6 to OFF.
 - » LED 🗯 switches off

S2 ON 12345678

- 7. Set S2 DIP-switches 1-2-3-4 to ON.
- 8. Return S1 DIP-switches to the original combination.

Other functions: button programming

- 1. Exit programming mode by setting S2 DIP 6 to OFF.
 - » the LED ## flashes

2. Refer to the table "Basic configuration" to identify a DIP-switch combination in which the desired functions corresponding to the buttons you want to program appear, then set the S2 DIP-switches.

Example: For button 1= Call to secondary switchboard (CCS) and button 2= Self Activation (AI), set S2 DIP-switches 1-2-3-4 as specified in row "C" in the table "Basic configuration".

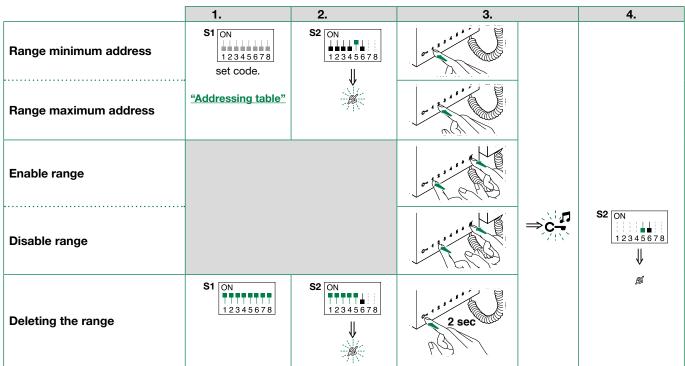

- 3. Press and release the buttons involved in the change.
 - » Correct procedure indication: the LED •O flashes for a few seconds and a confirmation tone sounds.
- 4. Exit programming mode by setting S2 DIP 6 to OFF.
 - » LED **\(\sigma** switches off
- 5. Set S2 DIP-switches 1-2-3-4 to ON.

Programming range

Take note of the S2, S1 settings and restore on completion of programming

Changing the ringtone

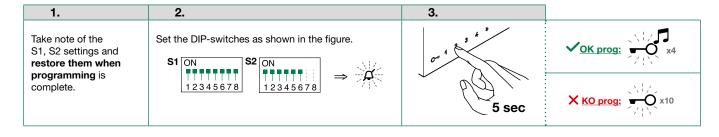

- 1. Press and hold —O for 6 sec.
 - » a confirmation tone is emitted
 - » the LED **A** flashes
 - √ the procedure can only take place while the system is in standby; otherwise the LED

 ✓ will flash 4 times to inform the user that the system is busy
- 2. Press and release the button -O
 - once (1 confirmation tone sounds) to change the ringtone for calls from the external entrance panel.
 - twice (2 confirmation tones sound) to change the ringtone for calls from the switchboard.
 - 3 times (3 confirmation tones are emitted) to change the ringtone for intercom calls made from the door entry monitor.
 - 4 times (4 confirmation tones sound) to change the floor door call ringtone.
 - Any further pressing of the button repeats the sequence described above.
- 3. Press and release 1 to scroll through the available ringtones in sequence.
- **4.** Press 2 to confirm selection of the last ringtone heard and to exit change ringtone mode.
 - » a confirmation tone is emitted
 - » LED 💢 switches off
- 5. Repeat steps 1 to 4 to change the other ringtones.

Programming reset

Factory settings:

- Button functions for the S2 DIP 1-2-3-4 combination
- Intercom address absent
- Range function and min./max. addresses absent
- Ringtone reset
- "Automatic door opening on receipt of call" and "Silent" mode disabled
