Selecting the Right Screen

Select the Right Size for the Audience

When choosing a screen size, there are many important factors including room dimensions, audience size and arrangement. It is important to fit the screen to the audience – not to the projector. Da-Lite recommends the following formula for determining screen size:

- **For 16:9 and 16:10 Formats:** An easy way to determine screen size is to take the depth of the room and divide by two. This will equal the approximate diagonal of viewing area for your audience in 16:9 or 16:10 format.

- **For 4:3 Formats:** Another way to calculate the size of screen would be to divide the depth of the room by 6, which would equal the height of the screen in 4:3 format.
- Ideally, the first row of seats should be approximately 2 screen heights away.
- The bottom of the screen should be a minimum of 3-4 feet above the audience floor, allowing those seated toward the rear of the audience to see the screen. This may require additional screen drop.

Select the Format

Select the appropriate format for your projection application. Common formats are as follows:

Common Applications	Aspect Ratio (W x H)
HDTV Video	1.78:1
Wide Format	1.60:1
Cinemascope	2.35:1
Letterbox Video	1.85:1
NTSC Video	1.33:1
PAL Video	1.33:1

Select the Best Surface for Your Image

Choose the screen surface that best suits your projection and viewing requirements. If the screen will be used for multiple projection methods, choose the screen surface that meets the requirements of the lesser performing projection method. For example, if using a 1,500 lumen projector and a 2,500 lumen projector, choose the screen surface for the 1,500 lumen projector. For your convenience, the following pages provide descriptions and performance characteristics for each front and rear screen surface.

How to Calculate a Custom Screen Size

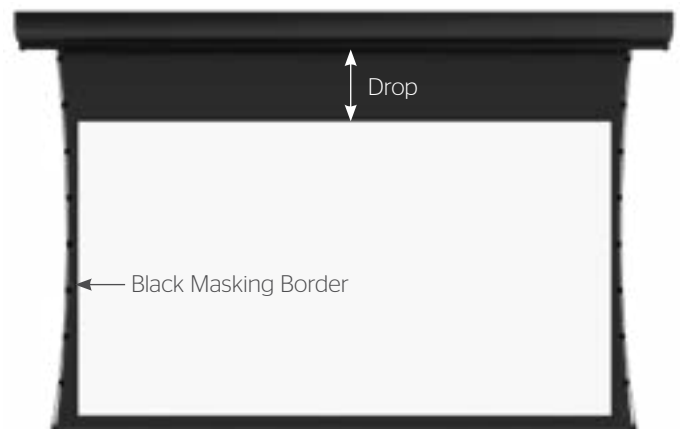

Use the following formulas to calculate a custom size. These formulas will assist you in finding the viewing area only.

16:9 HDTV Format	16:10 Wide Format	2.35:1 Cinemascope Format	4:3 Video Format
Diagonal x 0.49091 = Height	Diagonal x 0.530 = Height	Diagonal x 0.3916 = Height	Diagonal / 1.667 = Height
Diagonal x 0.87247 = Width	Diagonal x 0.848 = Width	Diagonal x 0.9209 = Width	Height x 1.33 = Width
Height x 2.0395 = Diagonal	Height x 1.887 = Diagonal	Height x 2.554 = Diagonal	Width / 1.33 = Height
Width x 1.14585 = Diagonal	Width x 1.179 = Diagonal	Width x 1.0868 = Diagonal	Height x 1.667 = Diagonal
Height x 1.78 = Width	Height x 1.6 = Width	Height x 2.35 = Width	
Width x 0.561837 = Height	Width x 0.625 = Height	Width x 0.4255 = Height	

Screen Borders and Drop

Black masking borders are standard on Da-Lite front projection screens at no extra charge. Borders enhance the perceived brightness of an image on a screen. The human eye perceives the image to have more contrast and a sharper picture with brighter colors. Borders also allow the projected image to “bleed-off” the screen for professional appearing presentations.

Drop is available on most Da-Lite wall, ceiling and electric screens. Drop is the term used for extra fabric added to the top or bottom of the screen to adjust the screen surface to within normal viewing heights. Drop can be specified in either black or white.

Front Projection Screen Surfaces

All Da-Lite Front Projection Screen Surfaces have achieved GREENGUARD GOLD Certification. All Da-Lite surfaces can be cleaned with mild soap and water, are flame retardant and mildew resistant.

Polacoat Diffusion Screen Coatings

DA-100

Gain: 1.0 Half Angle: 35° Viewing Cone: 70°

DA-100 WA

Gain: 1.0 Half Angle: 52° Viewing Cone: 104°

A light gray diffusion coating that provides a unity gain and especially wide viewing angles. This wide angle optical coating is designed for use in applications where a standard throw lens is required. Due to the increased half angles, DA-100 WA performs well with wide format screens. From the viewer's perspective, side-to-side uniformity of the screen is maximized.

DA-180

Gain: 1.8 Half Angle: 30° Viewing Cone: 60°

A neutral gray coating offering a higher on-axis gain for situations where a moderate output projector is utilized and where there is a high amount of ambient light present. This coating is well suited for applications where viewing angles are not wide and a higher gain coating is needed for on-axis viewing.

DA-230

Gain: 2.3 Half Angle: 25° Viewing Cone: 50°

A neutral gray coating with high gain and a moderate viewing angle. The increased gain of this surface makes it suitable for environments where ambient light is uncontrollable and a projector with moderate light output is utilized. Good for situations where the audience is centered within a 50-degree cone from the center of the screen.

Video Vision

Gain: 1.0 Half Angle: 55° Viewing Cone: 110°

A special coating process generates a screen ideal for video projection under controlled light conditions. This material offers an exceptionally wide field of view so each audience member will observe a uniform, bright, sharp image with no color shift.
