NEW SL2100 IP SYSTEM KIT

As the SL2100 Quick Start Kits with digital telephones have been so successful with our Reseller network, NEC is excited to announce our new SL2100 IP Quick Start Kit!

VoIP is the fastest growing market segment in the communications industry. As such, we have seen an increase in SL2100 IP system applications and configurations, as well as an increase in the popularity of the SL2100 self-labeling IP telephone. So creating an SL2100 IP Quick Start Kit was the next logical step.

This new system kit consists of the following items:

SL2100 IP Quick Start Kit – p/n Q24-FR000000136969			Reseller Price
Qty	Part Number	Description	
1	BE116491	SL2100 Chassis	\$999.00
1	BE116496	SL2100 CPU Card, <i>pre-loaded with:</i> <ul style="list-style-type: none"> Email Notification License (BE116751) (2) SIP Trunk Licenses (BE116745) (2) SIP Station Licenses (BE116746) 	
4	BE117453	SL2100 Self-Labeling IP Telephones	

As you can see, we've pre-loaded the more popular IP-related licenses in the CPU, but additional system licenses can still be added as required. The pre-loaded licenses are activated in the NEC License Management Server (LMS), so if a CPU is damaged, the licenses can easily be transferred to a new replacement CPU by NEC Sales Support – *the same process as with a standard CPU.*

Email Notification Licenses –

Email Notification is by far the most popular SL2100 license. Email Notification automatically sends an email when a Subscriber Voice Mailbox receives a new message. The email can optionally include the recorded message as a wav file attachment. To hear the message, the email recipient double-clicks the wav attachment to have the message play in their wav player (such as Windows Media Player). Email Notification uses **SMTP (Simple Mail Transfer Protocol)** to deliver messages to the recipient's email account.

The user can optionally choose to have the **notification** be sent by an SMS text message, delivered right to their cell phone.

SIP Trunk Licenses & Standard SIP Station Licenses –

SIP Trunk Licenses were included in the new IP kit because SIP trunks have become much more popular in today's system configurations.

One of the primary reasons that SIP Station Licenses were included is the growing demand for BYOD (bring your own device) mobile communications, which is provided with the new NEC ST500 app for Apple and Android devices.

SL2100 InMail (Voice Mail) –

The SL2100 CPU is equipped with a 4-Port/2-Hour InMail. An *additional* (12) ports can be added with the SL2100 Main Chassis Expansion Card (BE116501) and *additional* storage is provided by one of the InMail SD Cards (SDVMS-C1 - 15 Hours, BE116502 and SDVML-C1 – 120 Hours, BE116503).

IP Channels –

The CPU is also equipped with (8) built-in VoIP channels. Additional VoIP channels are provided with the SL2100 VoIP Daughter Board (BE116500) and up to (7) 16-channel VoIP Channel Licenses (BE116744) can be added to the VoIP Daughter Board (maximum of 128 VoIP channels per system).

IP Self-Labeling Telephone –

The SL2100 Self Labeling IP Telephone has a single display screen that consists of two sections:

1. Common area for primary station features:
Date & Time, Extension Number and Name (optional), access to station programming, directories, etc.
2. Programmable Function Keys: (4) pages with a scroll key, each with (8) keys, for a total of (32)

The SL2100 IP Telephone must be powered by PoE (Power Over Ethernet) from a PoE data switch or a PoE injector. NEC offers a PoE Injector (p/n Q24-FR00000128534).

The new SL2100 IP Quick Start Kit, with pre-loaded licenses and (4) IP telephones is available now from your NEC Authorized Distributor!

If you have any questions, please contact your NEC Regional Account Manager or NEC Sales Support (800-365-1928 or GeneralSales@necam.com).

Sincerely,

Albert F. Kelley
