

Square Grille Installation Instructions

The square grille assembly consists of two pieces: the low-profile Nanoperf™ grille itself and an interior magnetic frame.

The custom-designed frame is designed to solve two common installation issues when using a square grille over a round speaker:

- 1) The dark-colored speaker can have the appearance of a hole behind the grille due to the corners being a lighter color. The uniform dark background of the frame prevents this from happening and the powerful neodymium magnets at each corner of the frame assure a uniform fit, and;
- 2) A magnetic square frame can often have aesthetic issues because it is easily rotated out of alignment when touched or cleaned.

When installing the grille frame, align the frame in its desired position and lock it in place using the corner-mounted screw-hole locations.

Be sure to orient the frame properly so that the indented circular speaker opening is facing into the room, minimizing the amount that the speaker will protrude from the ceiling when installed.
