

4850 Main Control

Up to four 4875 Master Stations

The ProAlert™ 480 is a multiplexed intercom system, designed specifically to meet the Area of Rescue Assistance communication requirements. During an emergency, building occupants can use the ProAlert 480 to call for assistance from an Area of Rescue in high-rise building and commercial facilities.

The ProAlert 480 operates over a common Cat-5 bus cable using addressable call stations to conduct hands-free, two-way communication with the master station. Installation costs are significantly minimized with the ProAlert 480 because of its relatively minimal need for conduit, wire and labor. Multiple master stations are also supported as a standard feature. This easy-to-install intercom system is expandable to accommodate high-rise buildings that have a requirement for an Area of Rescue Assistance communication system and riser based applications.

FEATURES AND BENEFITS

- Cat-5 common bus station cable, no home runs
- Supervised and addressable
- Up to 128 stations and 8 masters per main
