

## Cable Gland Instalation Guide

Part # LP-2360 Outdoor PoE & Ethernet Extender must be Installed correctly using Cable Glands to make unit weather resistant. Failure to use cable glands as described in this install guide may void warrantee. Cable glands provide protection from the elements for PoE & Ethernet Extender contained inside weather resistant aluminum box. This Page illustrates proper use of cable glands.

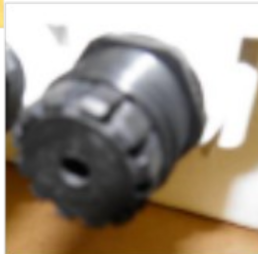

### Use only NEW Cat6 or CAT5E UTP Cable

**Use of old or other size cable may result in unit not working.**

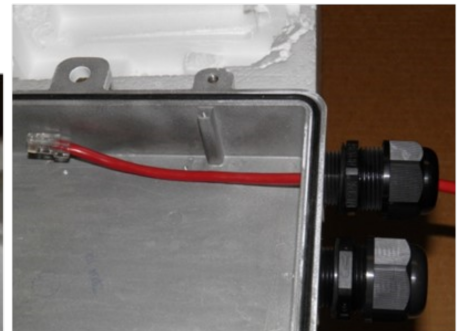

**Unscrew end cap to expose weather resistant cable sleeve**

**Remove sleeve and open, sleeve that has a slit and open for cable insertion.**

**Put Cable through end cap and thread sleeve onto the cable as shown. When Sleeve is on the Cable close sleeve**

**Insert sleeve with the cable attached into cable gland & box. Screw top on; be sure correct amount of cable is inserted into the sleeve to connect to board before you tighten the top. When top of cable gland is tight connection is very weather resistant.**
