# DETECTOR SENSITIVITY TESTING

## TRUTEST SMOKE DETECTOR SENSITIVITY TESTER

**TT801**  

Over time, smoke detector sensitivity can drift, becoming more or less sensitive. This fluctuation in sensitivity can cause the alarm to function ineffectively. Using detector testers to check the sensitivity of fire alarms is not only required by law but also provides greater control over the sensitivity of the fire alarms you're inspecting.

Trutest combines functional and sensitivity testing in one convenient package. With only one test, Trutest reads the precise detector sensitivity, indicating whether the detector needs to be recalibrated or replaced.

# ALARM COMPONENT TESTERS

## POWER CHECKER

Power Checker uses a patented, high accuracy pulse load test to provide a comprehensive means of testing the state of charge or state of power for more than 30 primary (nonrechargeable) and rechargeable battery types, including NiMH, Li-Ion, alkaline, lithium, coin cell, button type and more. This microprocessor-controlled unit is designed for commercial or home use

## DUCT CHECKER

Duct Checker is ideal for annual testing to ensure that the duct detector will sample the differential pressure via the sampling tubes, as required by NFPA 72. Duct Checker is manufacturer approved, easy to use, and ensures accurate results.

## CELL CHECKER

Cell Checker utilizes pulse load technology to provide a comprehensive test of a battery's state of charge and condition. Rather than simply displaying a voltage reading, Cell Checker determines a battery's remaining power capacity by measuring its ability to maintain voltage levels while under load.

Use Cell Checker to test the performance of 2- to 12- volt batteries up to 200AH. Cell Checker also tests SLA batteries.
