## The Hubbell Integrated System Advantage

Over the past decade, Ethernet data rates have escalated to support transmission of increasing volumes of data with larger file sizes associated with cloud computing, virtualization, streaming video and other digital media content. The increase in data rates impacts how networks and cabling infrastructure are designed and installed.

Supporting today's bandwidth intensive applications has resulted in a shift to 10GBASE-T deployments. As a result, 10GBASE-T is expanding in the enterprise and the data center. Hubbell's extensive line of both copper and fiber systems support 10GbE and other emerging technologies.

Hubbell is a Solution Developer Partner within the Cisco Developer Network Program

NEXTSPEED® Ascent Category 6A UTP solution is a tuned system of structured cabling components designed and balanced to work together to support bandwidth beyond 625MHz. NEXTSPEED® Ascent provides the highest level of reliability with a zero bit error rate of 10<sup>-13</sup>.

## Assemblies

The full line of Hubbell precision fiber assemblies has been expanded to include a new family of high density LC duplex cords with polarity-reversing features. Angle polished cords (APC) are now available for Gigabit Passive Optical Networks (GPON) and high speed systems. Standard patch cord lengths are expanded from 1 to 25 meters. For critical needs of the data center, the Hubbell BIDnet program offers custom make-to-order service, featuring premium quality cable and components. BIDnet fiber trunk assemblies are assembled locally and 100% factory tested with fast, reliable delivery.

## Reel Selection and Capacities for Hubbell HFCD Series Indoor and I/O Cables

### Hubbell Fiber Cable Delivery Policy

- HFCD Series fiber cables are priced and delivered in feet
- Cable orders, when permissible, are shipped on a single reel unless otherwise specified
- Multi reel put-up lengths required by the customer must be specified at the time of ordering
- Cable lengths that exceed single reel capacity must have the split approved by the customer
- MOQ for non-stocked cable is 1,640 feet
- Cables made to order are subject to a +/-10% production tolerance
- Customer order must match total length shipped
- Reel capacity values on this specification allow for a 2-inch cable-to-flange clearance as illustrated
- Refer to reel dimensions on selection and capacity charts
- Cut charges may apply to multi-reel orders

### Weights, Dimensions and Capacities

- Cable Weight = [Length Ordered] X [Weight per Foot]
- Estimated Shipping Weight = [Cable Weight] + [Reel Weight] + [Skid Weight]
- Reel capacities on this specification allow for a 2 inch cable-to-flange clearance
- Refer to specific dimensions on the reel selection chart
- Shipping dimensions = [Flange] X [Flange] X [Width]
- Estimated Shipping Width = [Traverse Length] + [2 inches]

### Standard Reel Selections

## Power Distribution

Hubbell has developed a family of high performance power distribution units (PDUs) for use in data centers, telecommunication rooms and remote equipment enclosures. Hubbell PDUs are manufactured in a wide variety of horizontal and vertical configurations such as: metered and un-metered, with or without power load, receptacle count and receptacle configurations. Each PDU is 100% tested and inspected to assure reliable, conditioned power to the active electronics.

The family of Hubbell SystemOne floor boxes has been expanded to provide industry leading flexibility while accommodating an extensive range of applications. Hubbell SystemOne is constructed to give customers the ability to create personal solutions for their most demanding, power, data and AV requirements.

## Hubbell SystemOne Recessed Floor Box Applications

### 2-Gang Recessed

The Hubbell SystemOne 2-gang recessed concrete floor box offers eight styles, satisfying the requirements of almost any commercial building application. Rectangular or round covers, as well as furniture feed covers, are available in a variety of finishes to blend with any existing or new décor. A parallel-device layout reduces plug interference, maximizing functionality and performance.

### 4-Gang Recessed

Similar to the 2-gang Recessed Concrete Floor Box, Hubbell's SystemOne 4-gang recessed concrete floor box is available with rectangular or round covers. Ten different styles make it possible to meet the electrical requirements of most commercial projects—new construction or renovation. The parallel device layout maximizes functionality which can be limited when devices are mounted 90° from one another.

### 6-Gang Recessed

Increased power, data, and AV capacity is what the Hubbell SystemOne 6-gang recessed concrete floor box was designed to handle. Four styles allow the floor box to work within almost any commercial application to enhance connectivity. Rectangular and round covers are available in a variety of finishes that work with any aesthetic or finish.

### 10-Gang Recessed

With maximum capacity in a small footprint, the 10-gang box provides a uniform look with rectangular or round covers that are available in several finishes to complement existing décor. Electrical devices are mounted vertically and are mounted to the plate prior to securing it to the box. Two inch knockouts are designed into each box allowing for simple installation of AV cables with pre-connectorized heads and specific bend radius requirements.

## Family Look

Hubbell SystemOne recessed floor box line offers a common look regardless of capacity or installation. This simple concept ensures a consistent look throughout a building with rectangular or round covers. Round covers lend themselves to multi-story buildings, also using fire-rated poke-through devices.

### **A** Covers

All SystemOne covers are ADA compliant. The doors open to 180° for maximum access. Cables and plugs are protected by recessed connections.

### **B** One Screw, Three Fasteners

Pre-wired duplex or Style Line® receptacles with 8" stranded leads are installed into plates to allow for even more labor savings.

### **C** Easy Mount Device Plates

The Easy Mount device plates allow for a device to be mounted to the plate and wired outside of the floor box. The device and plate assembly are then easily installed and secured with one stud that locates the plate and one screw to secure it.

This patented single screw device fastening method maximizes efficiency while reducing install time and comes standard with all device plates for 2-, 4- and 6-gang boxes.

To assist with the floor box selection process, please have the following information available:

**Electrical Requirements**

Power (each electrical device requires one gang)  
Data/AV (consult manufacturers' specification for size/volume requirements), number required

Add up total number to determine needed capacity. If necessary capacity is not shown, round up to next size.

Example: 9-gang rounds up to a 10-gang floor box

**Application**

Above-grade (AG)  
On-grade (OG)  
Minimum concrete pour depth

**Cover Style**

Round  
Rectangular

## Two-inch Conduit Ready

## Recommended Fire-Rated Poke-Through Size Chart

To avoid over or under utilizing the capacity of the fire-rated poke-through, first determine how many gangs of power, data and AV are required for the application. The matrix below will guide you to the correct poke-through size.

		Recommended Fire-Rated Poke-Through Size					
Power Gangs	5	8"	10"	10"	10"	Exceeds capacity of Hubbell recessed poke-throughs	
	4	8"	8"	10"	10"

	0	–	4"	6"	8"	8"	8"
		0	1	2	3	4	5
		Data and AV Gangs					

Example: 2 gangs of power, 1 gang of AV and 1 gang of data is required. Find the intersection for 2 power gangs with 2 data/AV gangs. The highlighted intersection defines the recommended FRPT.

Industry standards are published design and performance requirements that are approved by industry ballot among cable and component manufacturers, specifiers and users. The objective of cabling standards is to promote global interoperability and minimum levels of performance.

As an active contributor to and leader in cabling standards organizations such as TIA and IEEE, Hubbell manufactures products that exceed all applicable standards. Compliance to industry standards is a long-term commitment by Hubbell Premise Wiring.

**Global industry standards offer the following advantages:**

- Interoperability of connecting hardware components
- Backward compatibility
- Open systems architecture
- Ease of migration to new performance levels
- Multi-vendor choice to the end-user

Compliance to standards also applies to MISSION CRITICAL® objectives. MISSION CRITICAL is defined as the delivery of long-term, uninterrupted service at stated performance levels.

This is the philosophy of the Hubbell 25-year MISSION CRITICAL warranty. For more information about Hubbell MISSION CRITICAL training and installer certification, visit [hubbell.com/hubbellpremisewiring/en](http://hubbell.com/hubbellpremisewiring/en).

**Permanent Link Field Testing**

The permanent link test configuration includes a 90m length of horizontal cable and one connector attached to each end (see diagram). One optional consolidation point connection is also permitted. The permanent link runs from the cross-connect panel in the TR to the work station outlet. The permanent link overall length must not exceed 295ft (90m).

**Channel Field Testing**

The channel test configuration includes a length of horizontal cable up to 90 meters, a work area cord, and two patch cord cross connections (see diagram). One optional consolidation point connection is also permitted in the channel. The channel overall length must not exceed 328ft (100m).

**Hubbell Approved Field Testers for UTP and Optical Fiber Cabling**

The Hubbell MISSION CRITICAL® warranty program recognizes the field testers and associated test adapters below. These testers function in a bidirectional mode with automatic data acquisition and storage.

## Recommended Installation Practices for Balanced Twisted Pairs

- Use the proper strip tool for the cable jacket. Do not cut into the conductor pairs.
- For best results, use the zip cord and peel away the cable jacket.
- Position the stripped cable jacket as close as possible to the termination point to minimize exposure of the twisted pairs.
- Maintain the natural twist of all conductor pairs as close as possible to the termination point. For Category 5e, 6 and 6A wiring, the maximum length of untwisted pairs is 0.5". Minimum untwisting optimizes return loss performance.
- Never uncoil UTP cable from a stationary spool. Permanent kinks will result from straightening, and NEXT failures may occur. Unwind the cable by rotating the spool with steady speed and tension. Also avoid scraping and kinking when feeding into conduit or raceway.
- Store cable slack for wall outlets above the ceiling for future re-termination.
- Use proper supports and spacing to minimize sag in horizontal runs. Long runs should use cable trays. Do not overload cable supports and trays.
- Do not exceed 40% cable fill ratio in any pathway.
- Avoid EMI by maximizing the separation distance from high voltage circuits, transformers, motors, etc. For shared pathways, use partitioned raceway with 2" minimum separation from power wiring.
- Do not run UTP cables over heater ducts or hot water ducts. High temperatures may degrade performance and deteriorate the cable jacket.
- Centralize TRs to equalize the horizontal cable runs on each floor. Maximum horizontal distance is 90 meters.
- Never use staples to position and manage cables.
- Use good cable management practices to maintain proper bend radius.
- For Category 6 and 6A cabling, store service loops in a figure-eight pattern to minimize cross-talk and EMI noise pick-up.
- All grounding and bonding shall be according to ANSI/TIA-607-C.

### Category 6A Installation Practices

Refer to Hubbell 10GbE cabling guidelines online.

*Note: Larger cable diameters will have an impact on design, pathway fill capacity and cable deployment.*

	<p>Never exceed a 90 degree bend.</p>
<p>Apply cable ties loosely and at random intervals. VELCRO® brand fasteners are recommended.</p>	<p>Do not over-tighten cable ties.</p>
<p>Try to minimize the amount of jacket twisting.</p>	<p>Do not over-twist cable; it can lead to torn jackets.</p>
<p>Avoid stretching the cable.</p>	<p>Do not exceed 25lb of pulling tension.</p>

## Horizontal UTP Cable and Patch Cords

- Solid copper 4-pair UTP is specified for distribution cabling. Stranded UTP is specified for patch cords for flexibility. Shielded cable is not commonly used in the U.S. Splices bridge taps are not permitted.
- Cable, connectors and patch cords shall be marked with the performance category. Always match performance categories of cables and components throughout the infrastructure.
- All cable, cords and connecting hardware shall meet performance requirements of ANSI/TIA-568.2-D. Hubbell assures this compliance with all products and cable partners.

### COLOR CODING:

	white-blue/blue
	white-orange/orange
	white-green/green
	white-brown/brown

## Backbone UTP Cable

- Solid copper 4-pair and 25-pair UTP is specified. An overall shield is optional.
- Performance category markings and compliance to ANSI/TIA-568.1 and 568.2 is required.
- Circuits with incompatible signals should be partitioned in separate binder groups. Prior to making shared sheath circuit assignments, consult the equipment manufacturer for signal characteristics (i.e., frequency, amplitude, voltage, etc.).
- Tip conductor insulation colors are matched to the binder group. Ring conductor insulation colors correspond the pair.

## Recognized Connector and Wiring Configurations

- 8-position modular jack/plug
- 8-position modular panel/plug
- T568A wiring or T568B wiring options
- Category 5e, 6 or 6A recommended

## RJ-45 ANSI/TIA-568 Wiring Conventions

Two wiring standards were adopted. Both configurations are based on maximum transmission performance.

8 Position / 8 Wire

### T568A

- 1: Green/White
- 2: Green
- 3: Orange/White
- 4: Blue
- 5: Blue/White
- 6: Orange
- 7: Brown/White
- 8: Brown

- Preferred method
- Directly compatible with 2-pair voice and token ring systems utilizing 6-position connectors

8 Position / 8 Wire

### T568B

- 1: Orange/White
- 2: Orange
- 3: Green/White
- 4: Blue
- 5: Blue/White
- 6: Green
- 7: Brown/White
- 8: Brown

- Optional method
- AT&T® standard
- Directly compatible with AT&T phone systems

## Wiring Conventions

Local area network (LAN) standards designed to operate over UTP specify pin/pair assignments on modular connectors for various signal transmission protocols. While T568A and T568B conventions support all these designations, there are some cases where the user chooses to cable only the number of pairs required to support these applications.

8 Position / 4 Wire

10/100BASE-T

- 10 Mbps Ethernet over UTP
- Uses only two pairs
- 100 Mbps Ethernet

8 Position / 4 Wire

Token Ring

- 4/16 Mbps token ring over copper
- Uses only two pairs

8 Position / 4 Wire

TP-PMD

- 100 Mbps FDDI over copper
- Uses only two pairs

8 Position / 8 Wire

1000BASE-T (T568A)

- 1000 Mbps Ethernet over UTP
- Uses all four pairs

## USOC Conventions

Universal Service Ordering Codes (USOC) are a series of Registered Jack (RJ) wiring configurations for connection of customer premises equipment to the network. FCC regulations govern these configurations.

6 Position / 6 Wire

USOC RJ25

6 Position / 2 Wire

USOC RJ11

## History of Hubbell

The late 1800s marked an era of invention and business development, and Hubbell Incorporated was right there, on the forefront, pioneering new product designs and manufacturing innovations that would light the way to future success. Harvey Hubbell II, who founded the company in 1891 in Bridgeport, Connecticut, was one of the nation's true entrepreneurs. In 1896, he patented the "pull socket" with built-in switch, an invention that transformed Edison's electric bulb by providing a means of safe control. Amazingly, the same light bulb socket with its on-off pull chain remains in use today.

He also invented the electrical plug and duplex receptacles that are found wherever electrical power is used. The organization developed a reputation for products of the highest quality that still serves as a hallmark of the company today.

More than a century of technological innovation and rapid growth has followed, establishing Hubbell Incorporated as a worldwide leader in the manufacture of quality electrical and electronic products for the commercial, industrial, lighting, residential, telecommunications and utility markets.
