About Our Warranty

Global (3 Year) Limited Warranty

AV COSTAR™ warrants to Purchaser (and only Purchaser) (the “Limited Warranty”), that: (a) each Product shall be free from material defects in material and workmanship for a period of thirty-six (36) months from the date of shipment (the “Warranty Period”); (b) during the Warranty Period, the Products will materially conform with the specification in the applicable documentation; (c) all licensed programs accompanying the Product (the “Licensed Programs”) will materially conform with applicable specifications. Notwithstanding the preceding provisions, AV COSTAR shall have no obligation or responsibility with respect to any Product that (i) has been modified or altered without AV COSTAR’s written authorization; (ii) has not been used in accordance with applicable documentation; (iii) has been subjected to unusual stress, neglect, misuse, abuse, improper storage, testing or connection; or unauthorized repair; or (iv) is no longer covered under the Warranty Period. AV COSTAR make no warranties or conditions, express, implied, statutory or otherwise, other than the express limited warranties made by AV COSTAR above, and AV COSTAR hereby specifically disclaims all other express, statutory and implied warranties and conditions, including the implied warranties of merchantability, fitness for a particular purpose, non-infringement and the implied condition of satisfactory quality. all licensed programs are licensed on an “as is” basis without warranty. AV COSTAR does not warrant that (i) the operation of the products or parts will be uninterrupted or error free; (ii) the products or parts and documentation will meet the end users’ requirements; (iii) the products or parts will operate in combinations and configurations selected by the end user; other than combinations and configurations with parts or other products authorized by AV COSTAR or (iv) that all licensed program errors will be corrected.

ConteralP Omni LX Megapixel Cameras

Camera Overview

The ConteralP® Omni LX multi-sensor, multi-megapixel camera was built to withstand evolving customer change-requirements. The unique, future-proof platform of the ConteralP Omni LX provides organizations of all sizes the flexibility to deploy a security system that truly matches their video surveillance needs now and if requirements change in the future. With its ground-breaking flexibility such as the ability to easily move each of the four sensors around the magnetic 70+ placement-point Omni track, the 3-axis gimbals for an increased range of motion when positioning the sensors, and the ability to interchange the remote focus modular lenses for a customized field of view, the ConteralP Omni LX provides customers with the confidence in a future-proof investment. The ConteralP Omni LX changes when you do.

ConteralP Omni LX is available with a 20-megapixel (MP) resolution and 2.8mm lens. The customization of this camera is unparalleled offering a range of interchangeable lens options for each individual sensor including 2.4mm, 4.0mm, 6.0mm, 8.0mm, 12mm and 16mm options. For added flexibility, users can place the four individual three-axis lens gimbals independently in nearly any configuration on the track for applications such as hallway intersections or the corner of a building for a 270° view. The three-axis lens adjustment provides users with more camera placement options, allowing the cameras to be easily mounted on a wall or ceiling so they can pan, tilt, and rotate the lens in a variety of directions for a precise field of view. These cameras provide an all-in-one solution for capturing wide area video surveillance while maximizing the field-of-view and reducing the total number of cameras required saving installers time and end users money. ConteralP Omni LX is ideal for applications with normal to challenging lighting conditions. The Omni combines a day/night mechanical IR cut filter for the highest image quality at any time of day. For clear color images in low-light, NightView™ offers strong low-light sensitivity for capturing details in extremely poor-lit scenes. Power can be supplied via a single PoE+ (802.3at) compliant network cable or via a 12–48V DC/24V AC power supply.

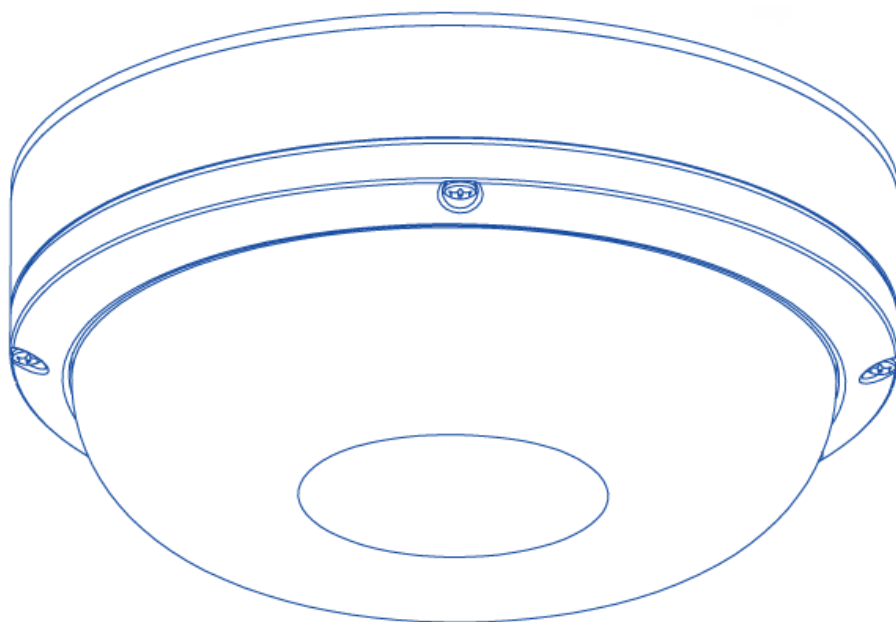

ConteralP Omni LX is designed for demanding environments. Certified to rigorous dust and water tests, the camera carries an IP66 rating. The rugged dome housing is IK-10 rated to withstand the equivalent of 55kg (120lbs) of force for vandal-prone applications.

AV Costar was the first to bring H.264 to the mainstream market and recently developed SNAPstream™ (Smart Noise Adaptation and Processing) technology for reducing bandwidth without impacting image quality. Today we are proud to offer our next generation H.265 with SNAPstream+™ smart codec capable of delivering high quality video while saving over 50% of the data rate to reduce or prevent strain on the network. The ConteralP Omni LX is ONVIF (Open Network Video Interface Forum) Profile S, G, and T compliant, providing interoperability between network video products regardless of manufacturer.

Installation

Accessories

AV Costar offers various mounting solutions for the ConteralP Omni LX series of cameras that provide wall, pendant, and corner mounting options. Please visit the camera models' webpage on www.avcostar.com or contact your local sales representative for information on all accessories.

Model Number	Description
AV-1AK	Audio Cable Kit
AV-CRMA-W	Corner Mount Adapter (AV Costar White)
AV-EBAR-W	Electrical Box Adapter (AV Costar White)
AV-PMA-W	Pole Mount Adapter (AV Costar White)
AV-PMJB-W	Pendant Mount Bracket with Standard Junction Box (AV Costar White) (Fits Cap 1.5" NPT, Box Fits 3/4" NPT)
AV-WMJB-W	Wall Mount Bracket with Standard Junction Box (AV Costar White) (Fits Cap 1.5" NPT, Box Fits 3/4" NPT)
SO-CAP-W	Mounting Cap for ConteralP Omni LX (AV Costar White)
SO-FMA	ConteralP Omni LX Flush Mount Adapter (White)

Surface Mount

The ConteraIP Omni LX can be directly attached onto hard ceilings or walls including wood, plastic, metal, and concrete.

1. Use the template, anchors, and screws provided to prepare the mounting provisions for the camera installation.
2. Use the supplied security L-key, to loosen the four (4) tamper resistant screws securing the dome cover.
3. Do not remove screws from the dome cover.

Figure 1: Remove four (4) tamper resistant screws

4. Remove the dome cover and set aside. Remove the protective foam and discard.

If mounting the camera outside or in a wet environment, thread the camera cable through the hole on the supplied rubber gasket and align with the three holes on the top of the housing. Ensure the gasket is properly seated flush with the camera housing.

Figure 2: Mount the Surface mount to the wall or ceiling using the three holes on the housing

NOTE: If you use the side connection of the NPT port, remove the cap covering the side entrance, otherwise; leave the cap in place. If using the NPT port, always use Teflon tape around the threads to ensure proper sealing. The conduit fits 3/4" NPT standard. Ensure NPT port is facing downward.

Using the three holes on the top of the camera housing, use the supplied screws and attach to the mounting surface.

Reference #	Description
1	Install 3 supplied dry wall anchors using the supplied mounting template
2	Attach supplied (optional) tether plate
3	Attach supplied rubber gasket to the camera housing by threading the camera cable through the hole in the gasket (ensure the gasket is seated properly)
4	Align 3 supplied screws with the dry wall anchors and screw camera into place
5	Attach the dome cover, ensuring the rubber gasket is properly seated, with the tamper resistant screws

1. Route the cable tree from the camera around the rear of the camera module and secure all cables. See the Connections section for details on how to connect the camera.
2. Check that the indicator LEDs are illuminated to the desired conditions (see LED Indicator table).

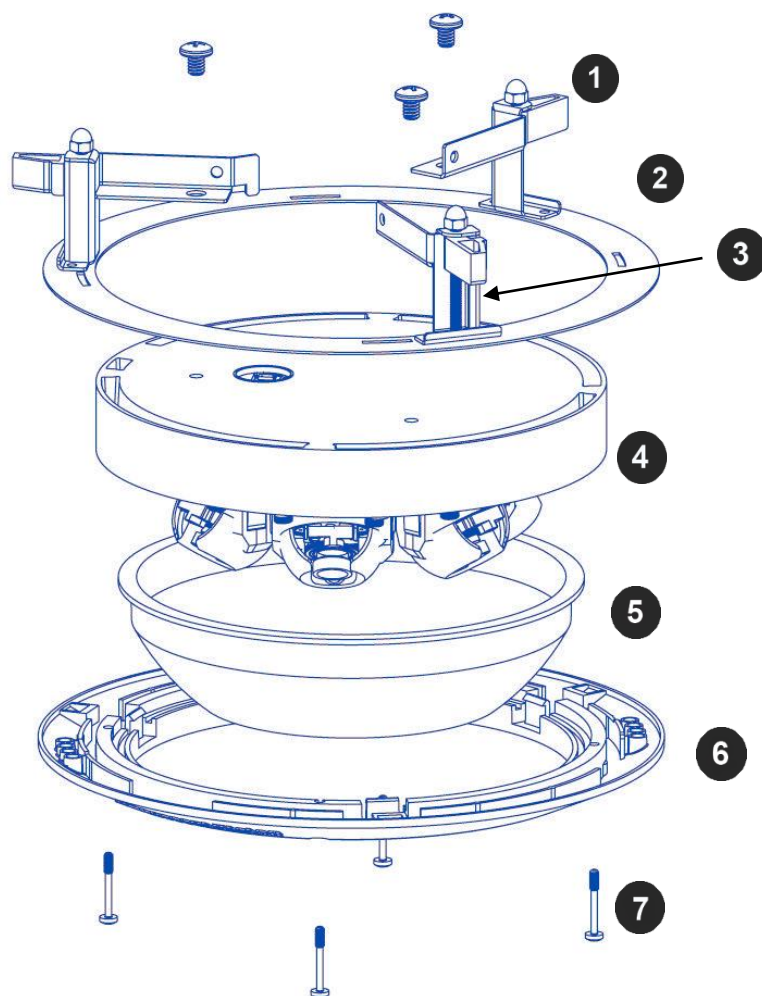

CAUTION! The captive screws must be used to properly secure the dome cover and camera housing. Failure to use the captive fastener may result in serious injury. When mounting the dome cover to the camera housing, ensure that the gasket is properly seated and not folded. Failure to do so may result in water and dust ingress. Water damage from improper installation is not covered by the warranty!

In-ceiling Mount / Flush Mount

To properly flush mount the ConteraIP Omni LX to a drop ceiling or similar surface, a flush mount adapter kit (SO-FMA) is required (sold separately).

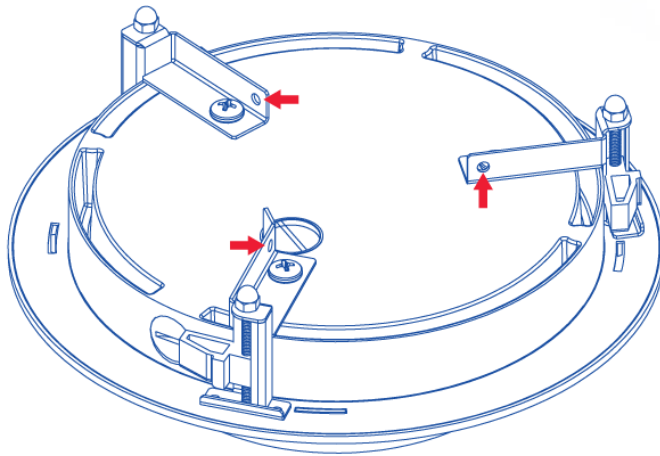

Reference #	Flush Mount Components Required
1	SO-FMA flange plate support arm
2	SO-FMA flush mount bracket assembly
3	Lever screw
4	ConteraIP® Omni LX camera
5	Bubble (without gasket)
6	SO-FMA trim ring
7	Trim ring screws

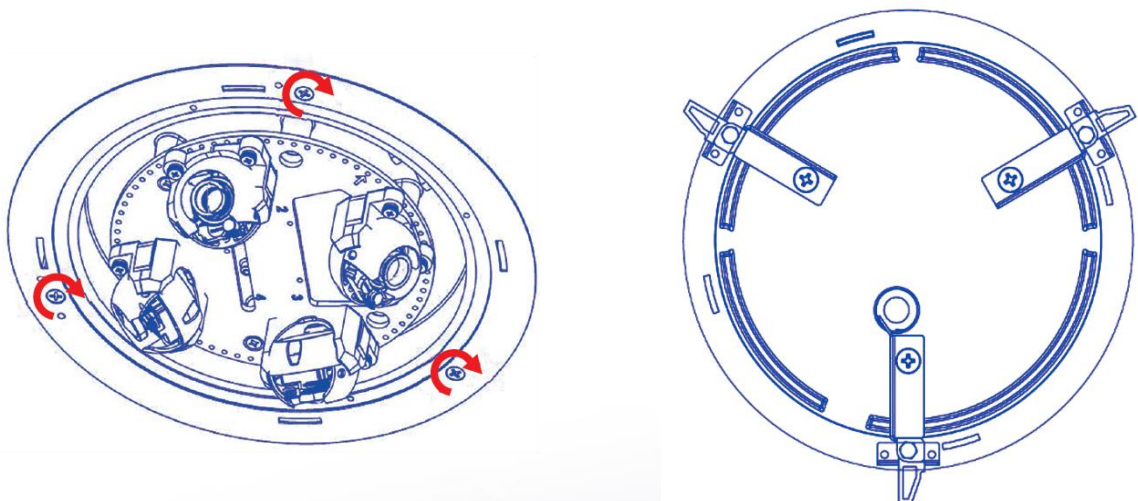

1. Cut a 9" diameter hole in the ceiling with the provided template.

2. Remove existing Dome cover from Omni LX camera and remove gasket from Bubble.
3. Attach Flush mount bracket assembly to Omni LX camera as shown and fasten a safety cable to one of the 3 holes in the bracket assembly. (Cable not supplied.)

4. Insert housing assembly into ceiling hole and tighten the lever screws until the flush mount is snugly installed.

5. The “Support Arm” will ride down the screw to compress the mounting surface.
NOTE: Do not over-torque the lever screws
6. Snap bubble (without gasket) into flush mount trim ring.
7. Attach the trim ring to the flush mount adapter by rotating until it magnetically snaps in place. And then tighten four trim ring screws.

8. To configure the camera, reference the set-up section.

Pendant Mount

For a proper pendant mount installation, the AV-PMJB-W pendant mount and SO-CAP-W mount cap are required (sold separately). A pendant mount should only be attached onto hard ceilings including wood, plastic, metal, and concrete.

1. Using the mounting template, prepare the mounting provisions for the camera installation.
2. Connect top shield, pendant pole and mount together as shown in Figure 1.

Figure 1: Attach the mount cap and pendant mount

NOTE: The thread size of top shield, pendant pole and mount is 1.5" NPT.

3. Attach the pendant mount to the ceiling using the four wood screws provided or any optional hardware suitable for the mounting surface.
4. Run the Ethernet Cable and outside power cable (if necessary) through the supplied rubber gasket and then through the pendant. Ensure the gasket is seated properly.

Figure 2: Attach the camera to the SO-CAP-W with the supplied screws

5. To configure the camera, reference the camera discovery, set-up and configuration section.

Wall Mount

For a proper wall mount installation, the AV-WMJB-W wall mount and SO-CAP-W wall mount cap are required (sold separately). A wall mount should only be attached onto hard ceilings including wood, plastic, metal, and concrete.

1. Using the Mounting template, prepare the mounting provisions for the camera installation.
2. Connect wall mount cap and wall mount as shown in Figure 1.

Figure 1: Attach wall mount cap to the wall mount

NOTE: The thread size for Top shield, pendant pole and mount is 1.5" NPT.

3. Run Ethernet Cable and outside power cable (if necessary) through the supplied rubber gasket and then through the wall mount. Ensure the gasket is seated properly.
4. Attach the wall mount to the wall using drywall screws or any optional hardware suitable for the mounting surface.

Figure 2: Attach the camera to the SO-CAP-W with the supplied screws

5. To configure the camera, reference the camera discovery, set-up and configuration section.

Pole Mount

For a pole mount installation, the AV-WMJB-W wall mount, AV-PMA-W pole mount, and SO-CAP-W mount cap are required (sold separately). A pole mount should only be attached onto hard ceilings including wood, plastic, metal, and concrete.

1. Using the mounting template, prepare the mounting provisions for the camera installation.
2. Connect the wall mount cap and wall mount.
3. Attach the AV-JBA-W (Junction Box Adapter) to the Pole Mount Adapter (Figure 1).
4. Remove the conduit plug on the junction box adapter and connect $\frac{3}{4}$ " NPT conduit to the junction box adapter (Figure 1).

Figure 1: Attach conduit to AV-JBA-W junction box adapter

Reference #	Description
1	Remove conduit plug
2	Connect $\frac{3}{4}$ " NPT conduit to junction box adapter (ensure use of water seal tape)

NOTE: Use silicon or water pipe seal tape to make sure no water leakage between conduit pipe and junction box adapter.

5. Run the Ethernet cable and outside power cable (if necessary) through the supplied rubber gasket and then through the Junction Box Adapter and AV-WMJB-W, Wall Mount Adapter. Ensure the gasket is seated properly.
6. Attach the Wall Mount Adapter (AV-WMJB-W) with mount cap (SO-CAP-W) to the Pole Mount Adapter (AV-PMA-W) as shown in Figure 2.

Figure 2: Attach wall mount adapter to pole mount adapter

Reference #	Description
1	Steel straps with compression screws
2	AV-WMJB-W wall mount
3	SO-CAP-W mount cap
4	Conduit
5	AV-PMA-W pole mount
6	AV-JBA-W Junction box
7	Apply Teflon water seal tape to the thread of 3/4" NPT pipe to avoid water leakage

7. Use the supplied two Steel Straps to attach the Pole Mount Adapter to the pole and tighten the compression screws as shown in Figure 2.
8. Attach the camera to the Wall Mount Adapter.
9. To configure the camera, reference the camera discovery, set-up and configuration section.

Corner Mount

For a corner mount installation, the AV-WMJB-W wall mount, AV-CRMA-W corner mount, and SO-CAP-W mount cap are required (sold separately). A corner mount should only be attached onto hard corner surfaces including wood, plastic, metal, and concrete.

1. Using the mounting template, prepare the mounting provisions for the camera installation.
2. Connect the wall mount cap and wall mount.
3. Attach the AV-JBA-W (Junction Box Adapter) to the Pole Mount Adapter (Figure 1).
4. Remove the conduit plug on the junction box adapter and connect $\frac{3}{4}$ " NPT conduit to the junction box adapter (Figure 1).

Figure 1: Attach conduit to AV-JBA-W junction box adapter

Reference #	Description
1	Remove conduit plug
2	Connect $\frac{3}{4}$ " NPT conduit to junction box adapter (ensure use of water seal tape)

NOTE: Use silicon or water pipe seal tape to make sure no water leakage between conduit pipe and junction box adapter.

5. Run the Ethernet cable and outside power cable (if necessary) through the supplied rubber gasket and then through the Junction Box Adapter and AV-WMJB-W, Wall Mount Adapter. Ensure the gasket is seated properly.
6. Attach the Wall Mount Adapter (AV-WMJB-W) with mount cap (SO-CAP-W) to the Corner Mount Adapter (AV-CRMA-W) as shown in Figure 2.

Figure 2: Attach corner mount adapter to exterior corner wall

Reference #	Description
1	Attach corner mount adapter to exterior 90° corner wall
2	AV-WMJB-W wall mount
3	SO-CAP-W mount cap
4	Conduit
5	AV-CRMA-W corner mount adapter
6	AV-JBA-W Junction box
7	Apply Teflon water seal tape to the thread of ¾" NPT pipe to avoid water leakage

7. Using the screws provided (or other hardware), attach the Corner Mount Adapter to an exterior 90° corner wall.
8. Attach camera to Wall Mount Adapter.
9. To configure the camera, reference the camera discovery, set-up and configuration section.

Electrical Box Adapter

The AV-EBAR-W electrical box adapter is used to attach the camera to a common single, double or square electrical box.

1. Using the AV-EBAR-W's supplied machine screws, match the mounting holes on the adapter with the threaded holes on the electrical box. Ensure every threaded hole is matched with a mounting hole.
2. Attach the electrical box adapter to the user supplied electrical box.

Figure 1: Attach AV-EBAR-W adapter to common electrical box

Reference	Description
5	4S box
6	4-11/16" square box
7	Single gang box
8	Double gang box
9	ConteraIP Omni LX Series

Camera Power Up

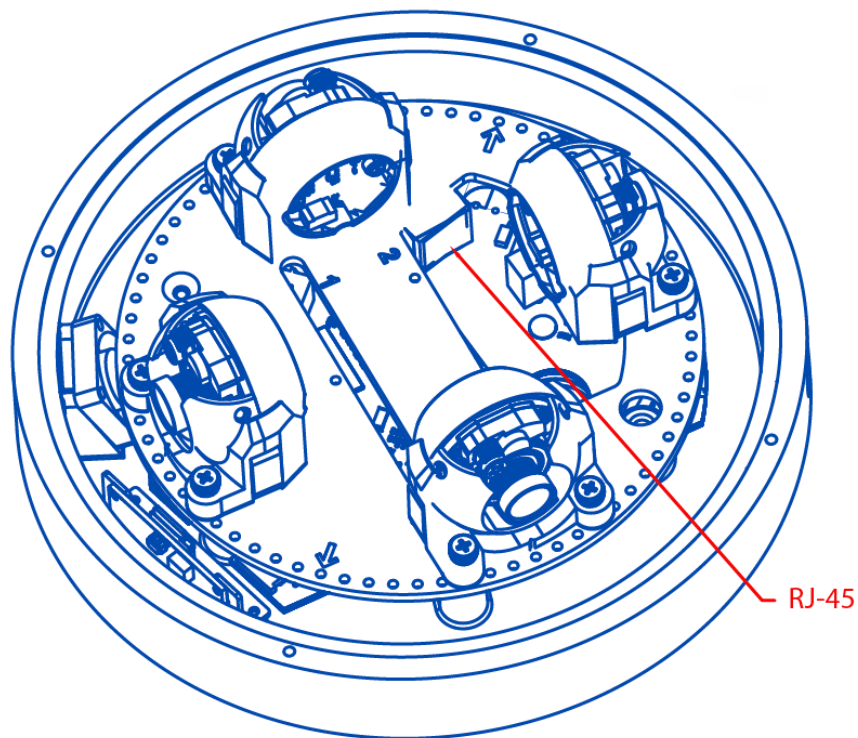

CAUTION! This product should be installed by a qualified service technician in accordance with the National Electrical Code (NEC 800 CC Section 60) or applicable local code. Wiring methods should be in accordance with the National Electrical Code/NFPA 70/ANSI, also with all local codes and authorities having jurisdiction. Wiring should be UL Listed and/or Recognized wire suitable for the application.

CAUTION! Make the connections inside a watertight compartment. Isolate unused power wires individually. After connections are made, ensure that the watertight compartment is tightly closed and cables and conduits are properly sealed to prevent ingress of water.

1. Connect the camera to a PoE+ port on 1000Mbps network PoE+ switch using an Ethernet cable.

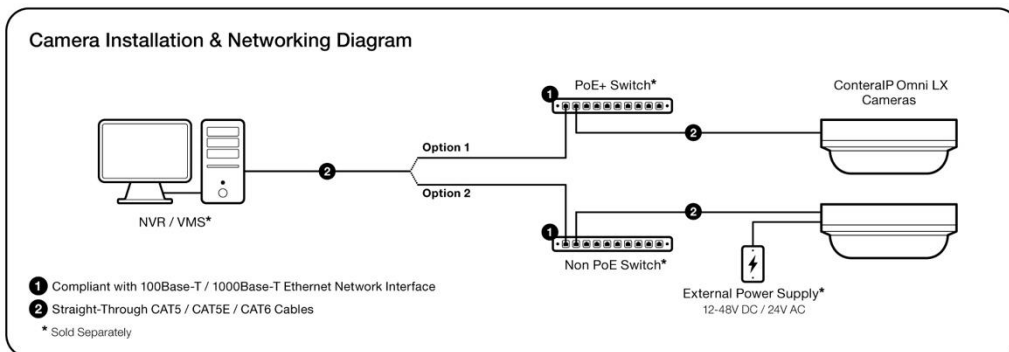

- If the camera is powered by an external power supply 12-48V DC or 24V AC must be supplied.

Connect the PoE+ switch to your computer's network port by using an ethernet cable.

LED	Status	Description
Green	Quick Flashing	Link has been established
	Slow Flashing	Normal operation
None	None	No connection

NOTE: This product is intended to be supplied by a Listed Power Adapter or DC power source, rated (1) 24VAC, 50/60Hz, (Max.14W); (2) 12-48VDC, (Max.14W); (3) 42.5-57V DC, (Max. 14W) for PoE+, Tma = 50°C, and the altitude of operation = 2000m. For assistance with purchasing the power source, please contact AV Costar for further information. Ensure the power cord connection of the power adapter at the socket-outlet provides an earthing connection.

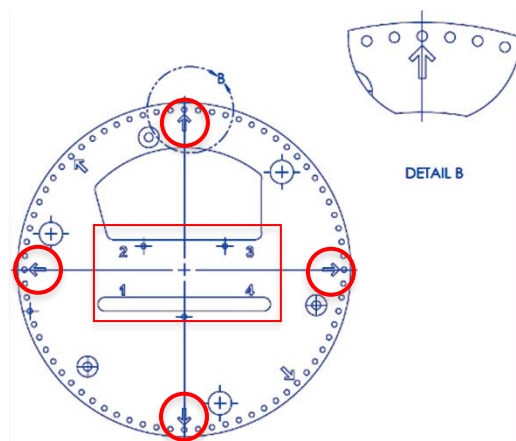

Setting up the Cameras

The ConteraIP Omni LX is user configurable. Prior to installing the camera, thought should be given to the sensor positions. It is always easier to make adjustments before the camera is installed.

The camera lenses are shipped in a 360° position as shown below (Figure 2). To customize the sensors, simply remove the two screws for each individual sensor, position anywhere on the magnetic track and then screw into place. Screw holes around the circumference are spaced in 5 degree increments. The arrows marked on the track plate are 45 degree reference points (Figure 1).

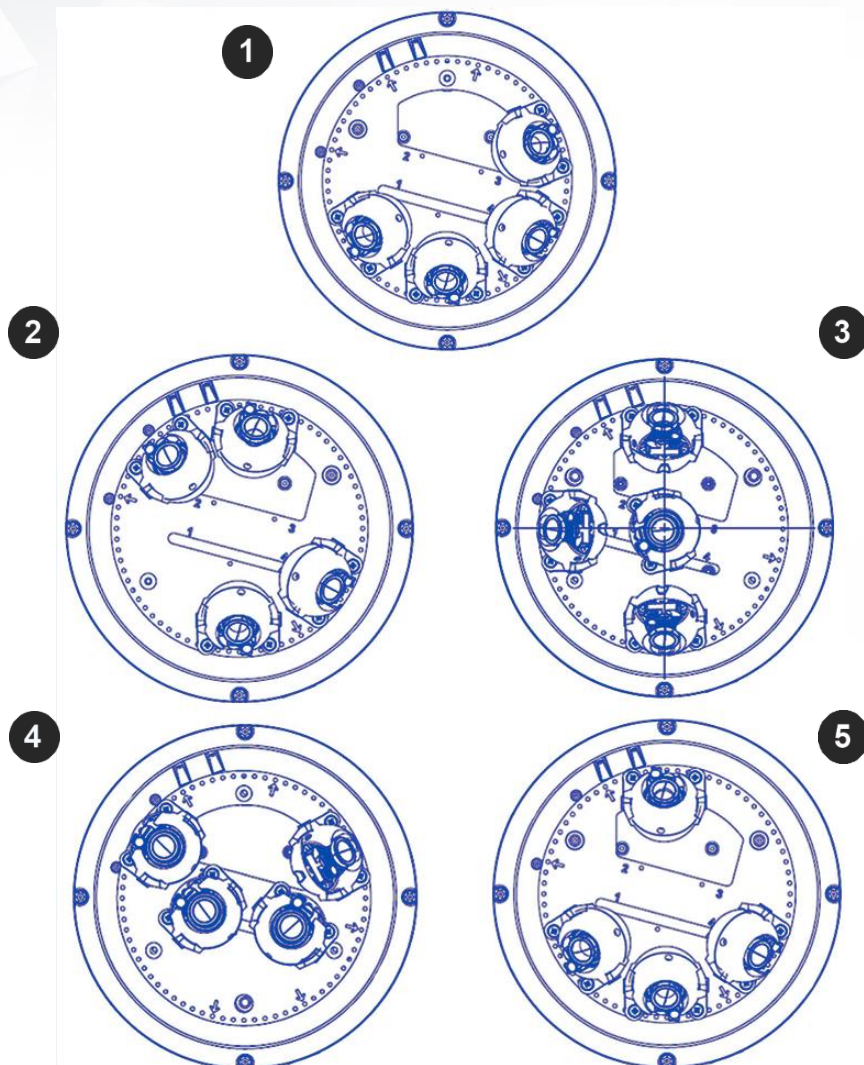

Sensor numbering is indicated on the track plate, which corresponds to the sensor number via the camera software (Figure 1). The slots on the track plate provide additional adjustment of the camera after installation. Simply loosen the three screws to rotate the plate then tighten the three screws after alignment. This feature is most useful for repositioning the cameras mounted to the center locations after the camera installation.

Figure 1: Arrows on the track plate indicate 45° increments

Each hole on the track represents a 5° increment.

Figure 2: 360° configuration (ideal for hallways)

Reference #	Description
1	180° configuration
2	Random configuration
3	270° configuration
4	Assembly line configuration
5	Random configuration

Aligning the Cameras

Properly aligning each camera is essential during setup. Each camera must be placed in a clockwise sequence on the circumference of the track to ensure proper viewing of each camera.

Figure 1: Place cameras in clockwise position on the track

Reference #	Description
1	Sensor 1
2	Sensor 2
3	Sensor 3
4	Sensor 4

When positioning the sensors, ensure the conduit mounting hole does not obstruct the cable when positioning the sensor.

Adjusting the Pan, Tilt and Focus

1. Remove the dome cover by loosening the captive fasteners with the supplied Philips head screwdriver.
2. Power on the camera to adjust the pan, tilt and focus.

NOTE: Ensure not to press the remote focus motor against the sides of the camera module when adjusting the field of view (Figure 1).

Figure 1: Remote focus motor

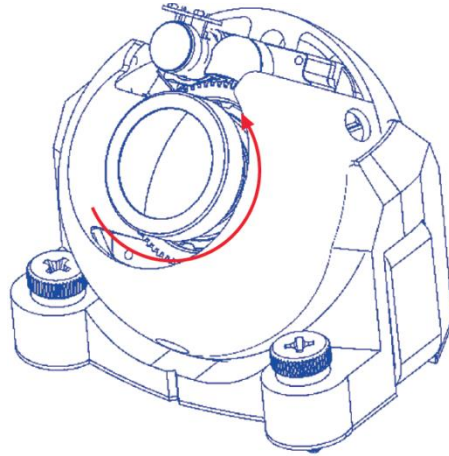

3. To adjust the focus, see the Focus Section of this manual.

NOTE: Positioning the lens motor to close to the board may cause interference with the magnetic Omni track. Ensure each lens motor is positioned away from the board.

Changing the Lens

1. Remove the dome cover by loosening the captive fasteners with the supplied L-key.
2. Manually unscrew the lens counterclockwise, this may take several seconds.

3. Screw the replacement lens clockwise until you feel some resistance and hit a hard stop.

Lens Options

NOTE: Spacers are required for some lens options. See table below.

Lens Part Number	Description	Numbers of Spacers Needed
MPM2.4	2.4mm	0
MPM2.8C¹	2.8mm	0
MPM4.0A	4mm	2
MPM6.0	6mm	2
MPM8.0	8mm	2
MPM12.0A	12mm	2
MPM16.0	16mm	1

1. Standard Lens

Alarm I/O Functions

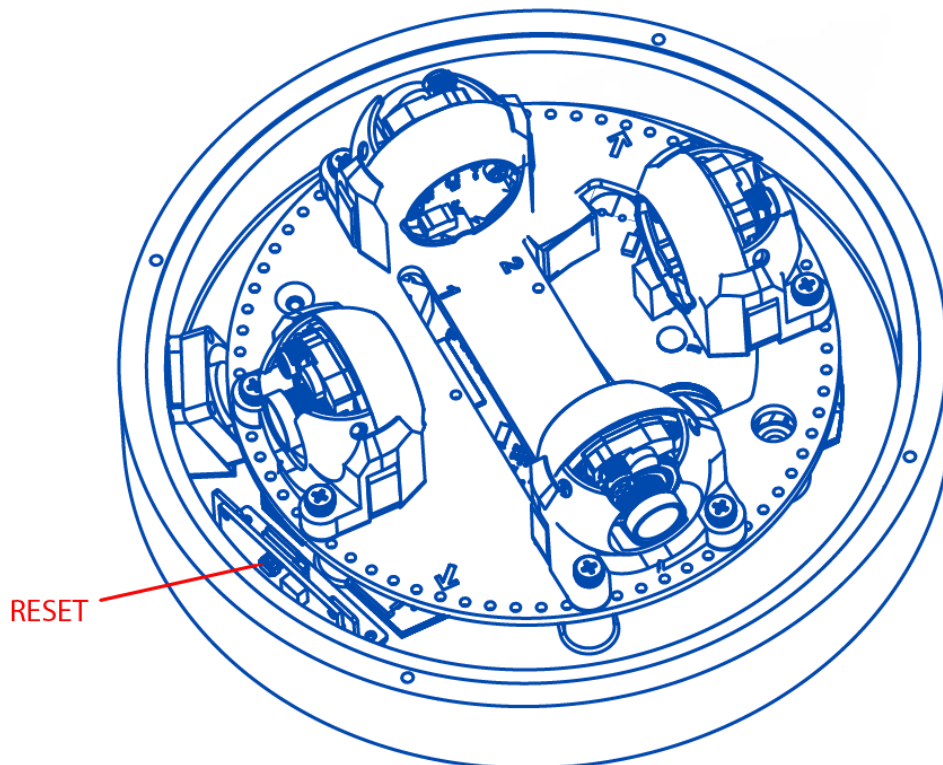

Connect the Alarm In (DI) connector to the alarm input sensor, and then connect the Alarm Out (DO) connector to the alarm output signal.

To avoid any damage, please follow the specification of the part as below:

Alarm In (Wet Contact)		Alarm Out (Wet Contact)	
3.5-12 VDC	50mA (max)	0-30 VDC	50mA (max)

Reset to Factory Default

1. Press and hold the reset button for 2 to 5 seconds, then release the reset button. This resets the camera to the factory default except for the network settings.
2. Press and hold the reset button for more than 5 seconds, then release the reset button.
3. This resets the camera to the factory default, and this resets the network settings to the factory default.

4. The user can also reset the camera to factory default via the camera web interface or the AV Costar Utility.

Audio/SD Card Info

- SD Card Slot

- Audio Connector

Camera Discovery, Setup, and Configuration

AV Costar Utility is recommended for camera discovery and setup. Software can be found on the website of AV Costar <http://www.arecontvision.com/software.php>.

The AV Costar Utility can provide multiple discovery options including broadcast and multicast, check the status of a camera, change the camera settings, import and export camera settings via a .csv file, and update firmware and/or hardware from virtually anywhere with a network connection.

The AV Costar Utility tool is efficient and convenient for mass or single camera uploads whether used for large installations that require an update to multiple settings, or smaller installations where only one camera needs to be changed.

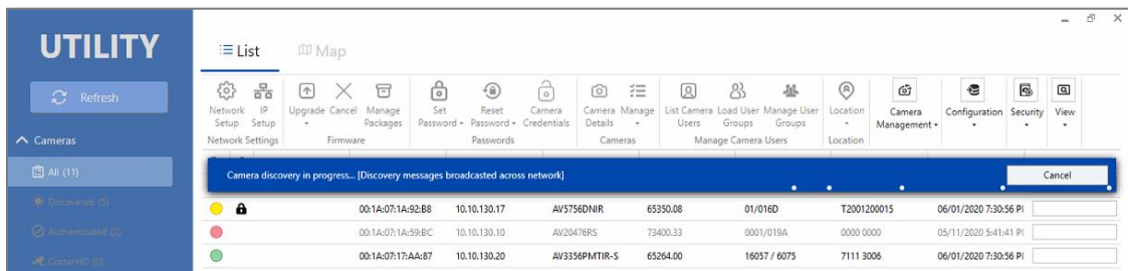

The AV Costar Utility version v3.1.2x+ tool is compatible with all AV Costar ConteralP cameras. The user manual for the software is available on our website.

Camera Discovery

1. Locate and double click Costar Utility shortcut on the desktop and login.

2. When the Costar Camera Utility is launched, it will automatically search the network for AV Costar and CostarHD cameras on the network and over a time interval. You can also manually search cameras by clicking the “Refresh” button.

3. You can access the camera web user interface by typing the camera IP address on the preferred web browser.

4. If there is no DHCP server present in the network, the camera will default to the following IP Address “192.168.1.168”.

NOTE: A password must be entered before the camera can be used. To choose a password, visit the camera’s webpage or use the configuration utility.

INITIAL PASSWORD SETUP

Prior to accessing this device for the first time a unique admin password must be created:

	<p>Stream Profiles: Balance Mode -Slow Shutter Quality Mode Moonlight Mode Custom Exposure Mode</p>	<p>Balanced Mode: Limits exposure time from 0.1ms to 66ms. The camera will keep highest FPS when Slow Shutter is unchecked.</p> <p>Quality Mode: Limits exposure time from 0.1ms to 200ms. This mode is a good compromise between reducing noise and motion blur under most lighting conditions, but with an increase in motion blur under low light conditions.</p> <p>Moonlight Mode: Limits exposure time from 20ms to 500ms. This mode produces the best image quality under very low light conditions with the least amount of image noise. The trade-off is low noise at the expense of high motion blur.</p> <p>Custom Exposure Mode: Enables manual setting of exposure time between 1 and 500ms. Shorter exposure times reduces motion blur for applications such as monitoring fast moving objects and reading license plates. The trade-off is an increased level of noise. It is recommended that this mode is used only when there is constant scene illumination sufficient enough to provide a quality image.</p>
<p>Lighting Compensation Frequency</p> <p><input type="radio"/> 50 Hz</p> <p><input checked="" type="radio"/> 60 Hz</p> <p><input type="radio"/> Custom</p> <p>Frequency (Hz)(5~255): <input type="text" value="60"/> <input type="button" value="Set"/></p>	<p>Lighting Compensation Frequency: 50Hz, 60Hz, Custom</p>	<p>Prevents flicker caused by the power line frequency of lighting. Choose 50Hz for Europe or China, and 60Hz for US or Japan. This parameter will have no effect when the dominant light is sunlight. Optionally, the user can select a frequency between 5Hz and 255Hz. It will be enabled when user selects "Custom."</p>

	<p>Day/Night Mode: Automatic Day Night Schedule Day Mode</p>	<p>Automatic: Enables the camera to automatically switch from day mode to night mode. User can define the switching level from Day to Night or Night to Day. Day: Forces the camera to stay in day mode. Night: Forces the camera to stay in night mode. Schedule Day Mode: User defined times that the camera remains in day mode.</p>
	<p>Camera Name</p>	<p>Specifies a name for the camera. The maximum name length is 32 characters.</p>
	<p>Font Border</p>	<p>Enables a border for the text overlay.</p>
	<p>Text Color</p>	<p>Options are Black, White, Green, or Yellow.</p>
	<p>Text Overlay: Off Date/Time Camera Name Camera Name + Date/Time Custom Text</p>	<p>There are four content positions (Top Left, Top Right, Bottom Left and Bottom Right) to display the text overlay. Date / Time: Displays the current date/time. It will force the camera to synchronize the date/time information. Camera Name: Displays the camera name you set. Camera Name + Date / Time: Displays both camera name and date/time information. Custom Text: Displays a customized text.</p>

<p>ROI Exit</p> <p>Select channel: 1 ▼</p> <p>* Create custom regions of interest by enabling zones below and selecting the desired quality level. Then create the ROI by dragging the mouse over the live image and press "Save Area" or "Del Area".</p> <p>Stream: Main Stream ▼</p> <p>ROI Zone 1: <input type="checkbox"/> Enable Medium ▼ Save Area Del Area</p> <p>ROI Zone 2: <input type="checkbox"/> Enable Medium ▼ Save Area Del Area</p> <p>ROI Zone 3: <input type="checkbox"/> Enable Medium ▼ Save Area Del Area</p> <p>ROI Zone 4: <input type="checkbox"/> Enable Medium ▼ Save Area Del Area</p> <p>ROI Zone 5: <input type="checkbox"/> Enable Medium ▼ Save Area Del Area</p>	<p>ROI (Regions of Interest)</p>	<p>ROI (Regions of Interest) is used to select which areas will be monitored and recorded with higher image quality while using lower image quality for other non-ROI zones in order to save bandwidth and storage.</p> <p>To setup the ROI:</p> <ol style="list-style-type: none"> 1. Select the desired channel 2. Select Main Stream or Sub Stream 3. Enable zones (up to five zones) and select the desired quality level (High, Medium, or Low) 4. Create the ROI by dragging the mouse over the live image 5. Press Save Area or Del Area

	Resolution	Selects the desired stream resolution
	Enable SNAPstream+™	Enable the SNAPstream+™ feature on the camera. This feature utilizes both Smart GOP and Smart ROI to reduce bitrate without impacting the image quality. Smart GOP sets GOP to automatically increase when no moving objects are detected. Smart ROI will increase the bitrate of moving objects and make them clearer.
	Variable Bitrate	Maintains the quality settings configured. There may be variation in the bit rate output from the camera when using this mode.
	Maximum Bitrate	Maintains variable bit rate control and maintains the bitrate under the rate limit you choose. It can be set from 128 kbps to 8000 kbps.
	H.264 Quality	H.264 image quality setting for variable bit rate control. Setting a lower value results in higher image quality or setting a higher value results in lower image quality.
	Frames Per Seconds	Frame rate adjustment for the camera video stream.
	GOP Length	Specifies how many frames exist between two consecutive I-Frames.
Sub Stream Codec: <input type="text" value="H.264"/> Resolution: <input type="text" value="1296x972"/> <input type="checkbox"/> Enable SNAPstream+™ <input type="radio"/> Variable Bitrate <input checked="" type="radio"/> Maximum Bitrate Rate Limit (128-8000 kbps): <input type="text" value="4000"/> H.264 Quality (1...10): <input type="text" value="3"/> <small>* 10 - lowest quality, 1 - highest quality</small> <input type="radio"/> Constant Bitrate (512-8000 kbps): <input type="text" value="0"/> Frames Per Seconds (1~15): <input type="text" value="15"/> GOP Length (1~120): <input type="text" value="15"/>

Privacy Mask

AV20576DN
 Firmware: 65431
 MAC: 00-1a-07-1a-a2-67

Focus Image Video & Audio Network **Privacy Mask** Event System Administration Support

Menu	Feature	Description
	Enable Privacy Mask	Creates a privacy mask on the image so the selected areas will not be visible.
	Select Channel	Select the desired channel to add privacy masks.
	Drag mouse to: Mask Unmask	Select Mask to add privacy masks or Select Unmask to remove privacy masks.

Menu	Feature	Description
<div style="border: 1px solid black; padding: 5px;"> <p>Motion Detection Exit</p> <p><input checked="" type="checkbox"/> Enable motion detection <input type="checkbox"/> Enable extended motion detection</p> <p>Select channel 1 ▼</p> <p>Zone Size (2..15) 11 Set</p> <p>Object Size Sensitivity (1..225) 2 Set</p> <p>Movement Duration Factor (2..31) 15 Set</p> <p>Motion Sensitivity (1..64) 30 Set</p> </div>	Enable motion detection	Turn on and off on-camera motion detection.
	Enable extended motion detection	Enables the extended motion detection and motion detection zones with an increase from default 64 to 1024 for enhanced motion detection sensitivity.
	Select channel	Select the desired channel to apply motion detection.
	Zone Size	Adjusts the size of motion detection zones.
	Object Size Sensitivity	Sets the size of each zone displayed by the motion detection grid. Contains sub zones where the number of sub zones is set by setting the zone size up to 32x32 (pixels). This setting configures the sensitivity of the motion detection to the size of objects in the image moving through the zone. Higher values will trigger motion only for larger objects moving through the zone, and lower values will cause detection of smaller objects in the zone (increasing sensitivity to smaller size objects moving through the image).
	Movement Duration Factor	Sets the sensitivity to brightness changes between dark and light objects within each grid zone. As an example, "Object Size Sensitivity" will set the size of the object detected within the zone, and "Movement Duration Factor" sets the duration that movement must be maintained to trigger motion detection. Lower settings can increase false motion alarms caused by image noise; higher settings will require more movement to trigger a motion event.
	Motion Sensitivity	Sets the sensitivity to sudden overall brightness changes in the image.

<div style="border: 1px solid black; padding: 5px;"> <p>Alarm Handler</p> <p><input checked="" type="checkbox"/> Enable Alarm Detection</p> <p>Alarm Schedule</p> </div>	Enable Alarm Detection	Enables Alarm Detection (Alarm In) function.
	Alarm Schedule	Configures the alarm schedule by holding down the mouse button and clicking the time block to enable the schedule settings on the selected time. A light blue color on the time block indicates that the alarm schedule is enabled, while a light grey color indicates that the alarm schedule is disabled. Alternatively, you can manually enter the numbers to configure the hours and minutes for the “start” and “end” of the day. S: Click “S” to set up a 24-hour schedule on a particular day. D: Click “D” to clear the previous schedule on a particular day.
<div style="border: 1px solid black; padding: 5px;"> <p>Digital I/O</p> <p><input type="checkbox"/> Trigger Alarm Detection</p> <p><input type="checkbox"/> Trigger Motion Detection</p> <p><input type="checkbox"/> Trigger Tamper Detection</p> <p><input type="checkbox"/> Trigger Network failure</p> <p>Type N.O. ▼</p> <p>Off Time 0 (0~30s)</p> </div>	Trigger Alarm Detection	When a signal is detected from Alarm in the Alarm out will be triggered.
	Trigger Motion Detection	When a motion event is detected the Alarm out will be triggered.
	Trigger Tamper Detection	When a tamper event is detected, the Alarm out will be triggered.
	Trigger Network Failure	When a network failure event is detected the Alarm out will be triggered.
	Type	Selects the type: N.O (Normally Open) or N.C. (Normally Closed)
Off Time	Specifies the alarm duration	

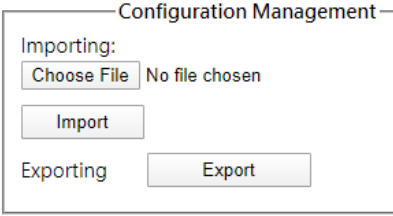

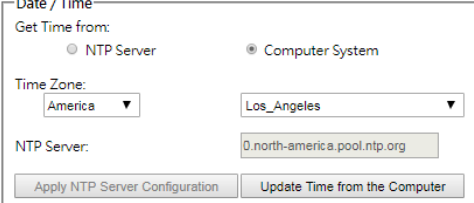

<p>Tampering Detection</p> <p>Select channel: <input type="text" value="1"/></p> <p><input type="checkbox"/> Enable Tampering Detection</p> <p><input type="button" value="Tampering Schedule"/></p> <p>Sensitivity: <input type="text" value="Medium"/></p>	Select channel	Select the desired channel to enable tampering detection.
	Enable Tampering Detection	Enables Tampering Detection function.
	Tampering Schedule	Configures the alarm schedule by holding down the mouse button and clicking the time block to enable the schedule settings for the selected time. A light blue color on the time block indicates that the alarm schedule is enabled, while a light grey color indicates that the alarm schedule is disabled. Alternatively, you can manually enter the numbers to configure the hours and minutes for the “start” and “end” of the day. S: Click “S” to set up a 24-hour schedule for a particular day. D: Click “D” to clear the previous schedule for a particular day.
	Sensitivity	Configures the sensitivity level of Tamper Detection: High, Medium, and Low.
<p>Network Failure</p> <p><input type="checkbox"/> Enable Network Failure</p>	Enable Network Failure	Enable network failure detection.
