

Cable Trench System

DataComm Electronics 15" plastic enclosure sections can be used to create a customized Cable Trench System that is designed to help manage the large bundles of bulk wire behind a rack installation. The added feature of a cable passthrough section with multiple cover options gives you more control over your installation.

Features

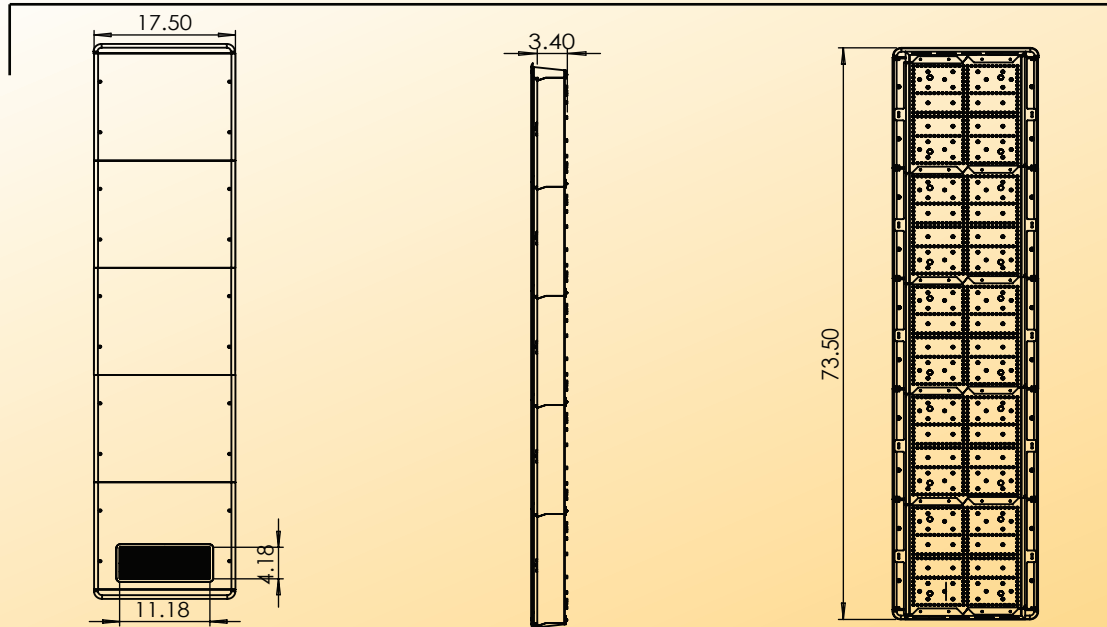

- Clean, finished look behind the rack
- For residential or commercial applications
- Protects cables from punctures
- Fits within 16" center studs
- Can be any height to fit your installation needs
- Easy re-access to cables
- Flush with the wall
- Modular, customizable and paintable
- Multiple removable cover options
- A la Carte parts available to customize your own Cable Trench
- Service loops and callbacks become more manageable
