QxControl™

Modern Video Management & Access Control Software

QxControl™ is a modern take on Video Management and Access Control software. With QxControl, commercial customers can manage their physical security from anywhere, on any device that runs a browser, using a cybersecure, intuitive UI.
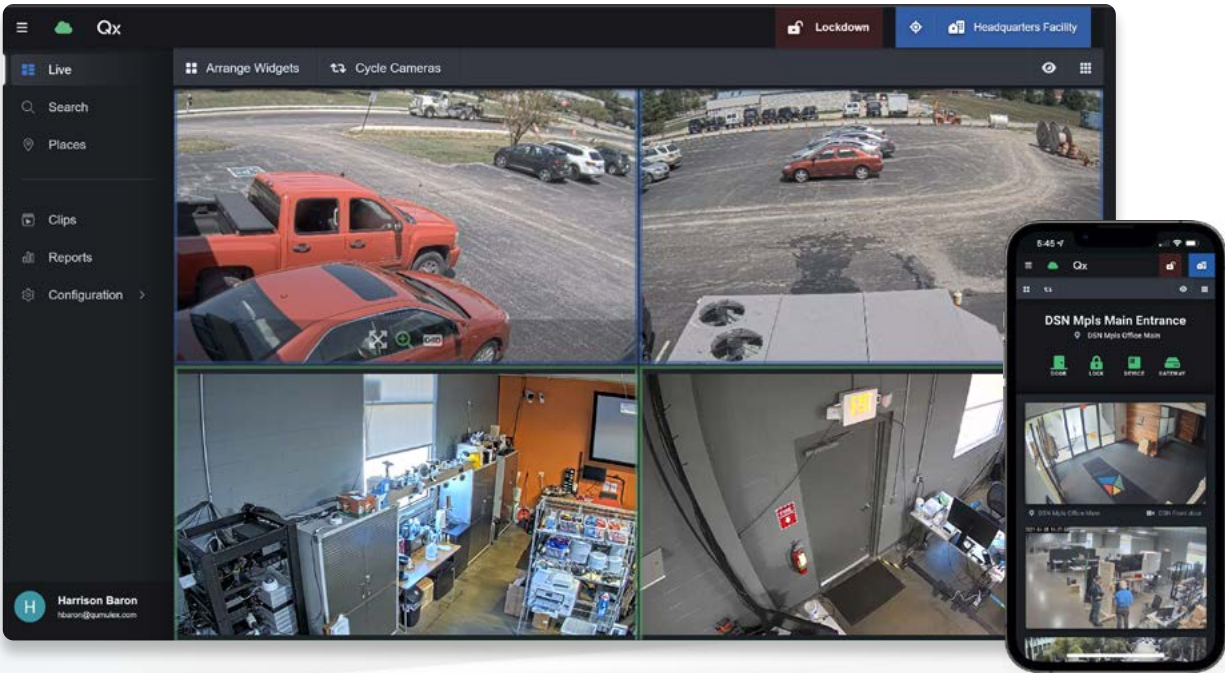

CLOUD   **ON-PREMISE**   **OPEN PLATFORM**   **SECURE DESIGN**

QxControl™ Features

System Management

- Unified video and access control for simple and efficient setup and administration from a single interface, without the pain of integrating disparate systems
- Modern, clean, easy to use interface
- View cameras, operate doors, and manage your system from any device with a browser, from anywhere
- Natively multi-tenant allowing easy management of many sites or customers
- Works with leading 3rd party cameras, door controllers, video analytics, and more.
- Progressive Web App technology enables a consistent user experience regardless of device (desktop, mobile, etc.)
- Always up to date with no desktop or mobile applications to manage
- Secure remote viewing with modern password management and no port forwarding (QXP)
- Remotely manage camera and controllers via secure "Go to Webpage" feature saving support and maintenance truck rolls
- Rules engine for notifications on video, access control, or health events

Video Management

- View and record video from ONVIF-compliant cameras
- Easily search for events from camera-based video analytics via QxControl's Smart Tags
- Total control over recording, including flexible limits on upload bandwidth usage when storing to external cloud (QXP)
- Instantly share video clips via Link Share in email or text message with included free cloud clip storage (QXP)

Access Control

- Configure door modes and operating schedules
- Remotely lock, unlock, and lockdown doors and places from any device with a browser, anywhere
- Remotely monitor door status
- Assign credentials to people and people into permission groups
- Comprehensive Door and Person activity reports

Feature Matrix
