INTRUSION AND ALARM COMMUNICATIONS

**Commercial Solutions Guide
2011-2012**

Honeywell

turbo-charged!

Put your sales in overdrive with Honeywell's VISTA Turbo Series

Honeywell's popular VISTA commercial and high-end residential control panels have been enhanced with exciting new capabilities and features to help you grow your business. Faster clock speed and enhanced software deliver more robust system performance and enhance the end-user experience. VISTA Turbo seamlessly integrates with Honeywell's WIN-PAK® access control systems, making it an ideal fit for larger installations. It also supports up to six color graphic touchscreen keypads and is compatible with Honeywell's Total Connect 2.0*—providing consumers with security system control on the go while providing you with an excellent opportunity for RMR.

VISTA Turbo. Simply a great way to drive new business.

Honeywell

For more information, please call **1-800-467-5875** or visit www.honeywell.com/security/hsc
Enhancements are available on models VISTA-128BPT, VISTA-128BPTSIA and VISTA-250BPT.

*Total Connect 2.0 available on VISTA-128BPT and VISTA-128BPTSIA.

Information for Dealers, Architects and Engineers

As a security consultant, security dealer, salesperson, electrical engineer or other low-voltage system architect, you need information that helps you to select the right security equipment for a wide variety of system applications for building sensing and control. This publication makes it easy for you to find the industry's best equipment for security, environmental monitoring, look-in, listen-in, access control and fire alarm system applications. Minimizing the time required to research product facts and specification items will clear your schedule so you can develop new sales and project opportunities each week. Here are some other reasons why this publication is so important for you:

Fast access to vital information: At the back of this guide an extensive index section allows you to quickly and easily find anything you need to know. Whether you are looking for a specific model number, application type, connection method, or comparison charts, this superior index leads the way to fast, reliable information that makes your product research project amazingly easy. This helps you to be more effective in system design research and saves time.

A purpose-driven approach: We arranged each section to offer an informative approach to equipment selection. Introductory information in each section discusses important points related to the proper selection of equipment that follows, making it much easier to find the right product for the job. Product descriptions are complete with easy-to-reference information that recommends, describes and provides product specifications.

Information that simplifies the design process unlocks the power of the system: After you review this guide, you will find that this kind of information makes it easier to design a system that offers the maximum options for managing risks at the protected location. Diagrams for connecting and expanding the system give you the confidence to know that you are putting things together the right way. Detection pattern drawings help you to understand detector placement within the protected room or area.

This guide will help you:

- Know more about applications that you can offer
- Offer more because it makes systems easier to design
- Sell more applications with each system
- Get more return on your sales efforts. Each application you include will add tremendous value to the system that you offer, making it easier for the system owner to choose your solution.

About Us

Why Security Dealers and System Users Choose Honeywell Security Products

Honeywell is one of the world's leading manufacturers of electronic security systems. Our range of capabilities for commercial security applications is extensive, and our products protect millions of homes, businesses and government facilities around the globe.

Honeywell Security offers a complete line of products, providing an end-to-end solution for all of your security needs. Using Honeywell Security products, you can create a wide variety of applications to help you to manage business risks like burglary, injury claims, employee theft of business machines and assets, supervision of temperature in refrigeration, scientific equipment, data rooms and many other applications. From intrusion detection and fire alarms to access control and video products, our integrated solutions include everything you need to sense, control, and respond when critical events require your attention or the attention of local authorities.

Our resources make us the best product choice because Honeywell makes it easier to:

- **Promote your company** with custom brochures and other publications
- **Create valuable applications** that solve real problems and are easy to offer to your clients
- **Acquire products for your solutions** at over 100 ADI distribution locations in North America
- **Install the product** because we design our products to be "installer friendly"
- **Support the product** with features that maximize product performance, while simplifying tasks related to adjustment and inspection
- **Move on to your next design opportunity** as we pave the way with our innovative engineering group that continues to develop and release new security products

The following sections describe some other reasons why security professionals and decision makers make Honeywell their first choice for security products.

Investing in Your Future

As electronic security pioneers, Honeywell is rooted in a long history of developing many of the groundbreaking advances that have shaped today's electronic security industry and the design of most security devices. Our superior development has consistently led to historic breakthroughs in reliable detection equipment, advanced user interfaces, control panels and advanced communications devices.

Our extensive industry knowledge drives us toward developing answers to the electronic security challenges of today and tomorrow. We design our equipment to be easier to install so your technician will spend less time assembling and servicing systems. We developed the world's best-selling glassbreak and motion detectors, the industry's most reliable supervised wireless products and the most flexible hybrid control panels in the industry in order to minimize installation and service costs. We are also on the forefront of advancements in alarm communications technology – including the development of the groundbreaking Total Connect and GSM solutions that give the system user remote control and status of the protected facility.

Innovative, dependable products designed by the best minds in the industry. As a technology leader of innovation in the security industry, we employ a talented team of 300 engineers and continually raise the bar for the future, dedicating millions of dollars annually to research and development.

Commitment to Quality

Our products are built in world-class production facilities and are subject to rigorous testing exceeding industry standards for quality and performance. Honeywell complies with ISO-9001 protocols, an internationally recognized standard that defines a quality assurance system.

TECHNICAL SUPPORT DAYS/TIMES

Monday-Friday: 8:30 a.m. – 8:00 p.m. EST – support for all intrusion products, FBII residential panels and Street Smart (no technical support after 6:00 p.m. on Destiny/XL4/XL4C and equivalent panels)

8:30 a.m. – 5:30 p.m. EST – French language support

8:00 p.m. – 10:00 p.m. EST – support for VISTA-10P, VISTA-15P, VISTA-20P, FAP equivalent control panels, LYNX, AlarmNet GSM/iGSM activation and registration, Pro registration, GSM and iGSM

Saturday: 9:00 a.m. – 5:30 p.m. EST – support for VISTA-10P, VISTA-15P, VISTA-20P, FAP equivalent control panels, LYNX, AlarmNet GSM/iGSM activation and registration, Pro registration, GSM and iGSM

Technical support times are subject to change.

Customer and Technical Support

Our team of experienced, dedicated customer and technical support specialists are here to support dealers and installers of our products. Whether your question deals with technology, product selection, compatibility or troubleshooting, they have the solution.

STAR

Better understand system capabilities with our award-winning software, STAR: Specification Tools and Resources. STAR includes

links to design information and applications for a wide variety of facility and business types. Use this valuable resource to maximize the benefits of your facility's system. Visit www.honeywell.com/security/star

SystemWizard

Automate system design with SystemWizard, Honeywell's exclusive system design tool that helps you offer services, then

automatically provides a parts list and A&E specification document for the system. It helps you save time, capture background equipment for the system and offer better solutions. Visit www.honeywell.com/security/star and click on Intrusion/Fire (top image). Under Quick Links on the left, click SystemWizard.

MyWebTech

An invaluable reference tool, MyWebTech enables security dealers to research the latest technical data on Honeywell security products

24 hours a day, seven days a week from the very same comprehensive library technicians use in the company's call centers. Highlights include quick and easy access to technical data, FAQs, direct wires, installation instructions and a convenient search-by-feature library.

Discover Online Training Program

The Discover Online Training Program is a self-paced learning tool that makes it simple for dealers to access easy-to-understand course modules that cover

a wide array of vital training material, including CEU accredited courses. From top-notch selling techniques to in-depth product training, Discover provides you with all the tools you need to help you grow your business. For more information, visit www.honeywell.com/security/discover

Honeywell City...your destination for success!

Imagine your customers being able to explore an entire city of security solutions in a vast range of settings — from high-rise commercial buildings, retail

stores, industrial and government facilities to single-family residential homes. Honeywell City is a thriving online metropolis where visitors can truly experience innovation in action, seeing exactly how our robust solutions solve real problems in all kinds of environments. You can explore all you want, download materials or connect live with a Honeywell representative. See what you've been missing and head on over to Honeywell City, where it's easy to see why so many customers continue to choose us as their partner of choice. For more information, visit www.honeywellcity.com

Honeywell A&E Specification CD

Specify your system in a snap! When you need to write system specification documents, the A&E Specification CD can help you with ready-made content

that can be easily copied and then used within your custom specification document. This CD is a one-stop resource with A&E content supporting intrusion alarm, fire alarm, access control and video systems. Use these tools to save time when your project requires a specification along with your job estimate.

SystemWizard: Save Time and Offer More!

Are you specifying the most effective systems for your customers? SystemWizard saves time in the planning process while offering more system options.

Maximize:

- Services to offer
- Knowledge about system capabilities
- Value of systems you create
- Sales profit

Minimize:

- Research related to equipment selections
- Giving away equipment due to parts left out of system

Improve:

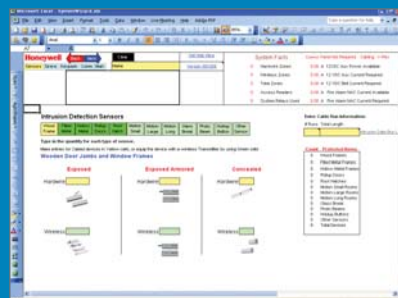

- The effectiveness of your sales organization
- The consistency of services you offer
- The customer's life
- Your bottom line

Control Panels

Control Panels for Commercial Applications

Control panels provide the central processing and logic for an integrated system. In a typical system, there are four major functions: inputs, outputs, user interfaces and communication. When an alarm initiating device, such as a motion detector, glassbreak sensor, manual fire alarm box or smoke detector is activated into alarm, it changes the state of the zone input to which it is connected. The zone input reports the status change to the control panel, which then uses its communication method to report the alarm to a central monitoring facility. In addition, the control panel activates local sounders and other notification appliances and provides status information at user interfaces such as keypads and fire alarm command centers where the system can be controlled and interrogated.

Control Panels for Fire Alarm Systems

Control panels listed in the Fire Alarm and Life Safety section are used for fire alarm applications or for systems that include life safety functionality.

Making Connections to Control Panels

Honeywell offers three effective connection strategies that help you greatly reduce installation costs and maintenance of your customer's system.

Conventional Strategy

There are a number of installation and design strategies for connecting sensors to the system. One common method is to design the system using conventional sensors connected to individual cables routed back to the control panel. Also known as a centralized or home-run approach, this is a typical approach when using conventional sensors that provide a dry-contact output.

When installing devices on the system, you can design a single zone to accept one or more devices connected together. When more than one device is connected to a zone, the system only provides identification for the zone itself. When installing a single device to each zone, each device becomes an individually identified zone.

V-Plex® Strategy

Honeywell dealers minimize installation costs and improve system reliability by using V-Plex. V-Plex provides a two-wire circuit that connects to multiple devices.

By routing the V-Plex cable from device to device, you will save on system costs because the two-wire V-Plex data bus can collect most or even all of the zone inputs required by the system. The V-Plex bus supports zone inputs and relay outputs, so it provides two-way functionality, allowing the system to sense and respond using the same pair of wires.

Minimize Installation Costs

- A single pair does the work of many home-run cables
- You will use fewer conduit runs and smaller pipe sizes
- You will use fewer conduit fasteners and couplers
- You will not have to pay as much labor for installing cable and conduit

Better System Reliability Means Less Costly Maintenance

- Fewer cables means fewer opportunities for shorts and cable breaks
- The bus provides power for compatible sensors that detect motion, glassbreak, smoke and other conditions. Using compatible devices minimizes the need for additional power supplies and reduces long-term maintenance costs.
- When bus isolation modules are used, the system helps you to troubleshoot errors
- Fully addressable devices make finding malfunctioning sensors much easier and faster than in conventional systems

Wireless Strategy

Another common method is to design the system using wireless sensors routed back to the control panel using a wireless signal. The control panel uses a wireless receiver to receive messages from transmitters connected to devices.

When installing devices on the system you can design a single wireless transmitter to accept one or more devices connected together. When more than one device is connected to a transmitter, the system only provides identification for the transmitter itself. When installing a single device to each transmitter, each device becomes an individually identified zone.

Honeywell offers supervised transmitters that are UL Listed for commercial burglary and fire alarm applications. The transmitters feature tamper switches on the cover and on the back and are fully supervised with regular check-in messages and battery supervision. In addition, Honeywell offers devices with wireless components built inside. These devices require no additional universal transmitter to be installed.

Minimize Installation Costs

- Wireless devices minimize the need for power supplies on the system
- There is a minimal cost for materials and labor related to wire and cable
- You will not need conduit runs for wireless devices

Better System Reliability Means Less Costly Maintenance

- Fewer cables means fewer opportunities for shorts and cable breaks
- A reduction in power supplies means fewer rechargeable batteries need to be replaced through time
- Fully addressable wireless devices make finding malfunctioning sensors much easier and faster than in conventional systems

CONTROL PANELS

VISTA-20P

The VISTA-20P is ideal in environments such as commercial offices, warehouses, schools, retail shops and restaurants. It provides up to 48 individual zone inputs for detection purposes. Users can split the building's protection to arm and disarm up to two separate partitions, and a common partition, so you can separate the office from the warehouse, or the office from public areas. This allows users to arm the office while the public areas are in business, or to arm the warehouse after the delivery staff departs, leaving the office disarmed for administrators that work throughout the day.

Optional remote status and control options allow business owners to manage the system from home or other locations using an Internet browser, cell phone, PDA or other modern mobile device.

The VISTA-20P provides eight on-board zone inputs and supports up to 40 ECP zone expansion devices and/or up to 40 wireless sensing devices. It is ideal for small to medium commercial locations.

SPECIFICATIONS

Capabilities:

- Users: 48
- User levels: 5
- History events: 100
- Schedules: 32
- Partitions: 2

User interfaces:

- Total keypads: 8
- Graphic touchscreen keypads: 4
- AlarmNet Total Connect: optional
- Telephone: optional
- Wireless arm/disarm: optional

Zones:

- On-board zones: 8
- ECP zones: 40
- Wireless zones: 40
- Total System zones: 48
- ECP relays: 16 Form C rated 1A at 12VDC

Communication options:

- On-board dialer: included
- GSM: optional
- Internet: optional

Programming options:

- Keypad
- Telephone
- Internet
- GSM

Power:

- Power input: 16.5VAC 25VA
- Standby battery: 12VDC 7AH sealed lead
- Operating current: 100mA Idle, 110mA Active
- Aux power output: 10.2-13.8 VDC at 600mA
- Bell output: 12VDC at 2A

Environmental:

- Temperature: 32° F to 122° F (0° C to 50° C)
- Humidity: 85% non-condensing

Physical:

Enclosure dimensions:
12.5" W x 14.5" H x 3" D

Listings:

- ETL/cETL Listed to UL365, UL609, UL985, UL1610, UL1635, UL1023, ULC-S545, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-C1023
- CSFM Certificate Number: 7167-1645:150

VISTA-21iP

The VISTA-21iP is ideal in intrusion detection applications such as commercial offices, small warehouses, temporary and permanent school buildings, retail shops and restaurants. With the VISTA-21iP's built-in AlarmNet Internet Communicator, you can now reduce the cost of telephone line connections, improve communication supervision and unlock the largest suite of integrated Total Connect remote control functions available in the industry today! Add to this an optional snap-in GSM communicator, and the system can offer additional communication pathways to the monitoring station, providing the most robust connection to monitoring services. When ensured communication counts, you can count on the VISTA-21iP.

The VISTA-21iP provides up to 48 individual zone inputs for detection purposes. Users can split the building's protection to arm and disarm up to two separate partitions, and a common partition, so you can separate the office from the warehouse, or the office from public areas. This allows users to arm the office while the public areas are in business, or to arm the warehouse after the delivery staff departs, leaving the office disarmed for administrators that work throughout the day. Optional remote status and control options allow business owners to manage the system from home or other locations using an Internet browser, cell phone, PDA or other modern mobile device. The VISTA-21iP provides eight on-board zone inputs and supports up to 40 ECP zone expansion devices and/or up to 40 wireless sensing devices – so it is ideal for small to medium sized commercial locations.

Expanding Zones on the VISTA-20P and VISTA-21iP

VISTA-20P and VISTA-21iP control panels offer an exclusive ability to add zone inputs and relay outputs using the four-wire keypad bus. This allows designers to expand the system to meet the zone input or relay output requirements for the location being protected.

You can connect modules shown in this section to the VISTA-20P or VISTA-21iP ECP bus.

4219

Description:

Addressable eight-zone expander for Honeywell ECP bus addressable systems

Product advantages:

- Can be located anywhere along the four-wire addressable ECP bus
- Simple DIP switch addressing to select range of zone numbers
- Adds up to eight class B zone inputs to an ECP bus addressable system, each with 1K end-of-line resistors
- Class B loops provide a broad, 300 ohm tolerance
- Supervised for open, shorted and normal circuit conditions
- UL Listed for commercial burglary applications

Recommended use:

Use for commercial systems when deploying conventional detectors in an ECP zone expandable system

Mounting recommendations:

- On a flat surface, centrally located to monitor up to eight zones from nearby detectors
- Locate anywhere on the ECP bus

Compatibility:

- All VISTA control panels that are compatible with ECP bus zone expandability such as VISTA-20P and VISTA-21iP
- Not compatible with V-Plex control panels

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

- Supplied by the control panel's four-wire ECP bus: 30mA at 12VDC
- External power supply option: 30mA at 12VDC (maximum)

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

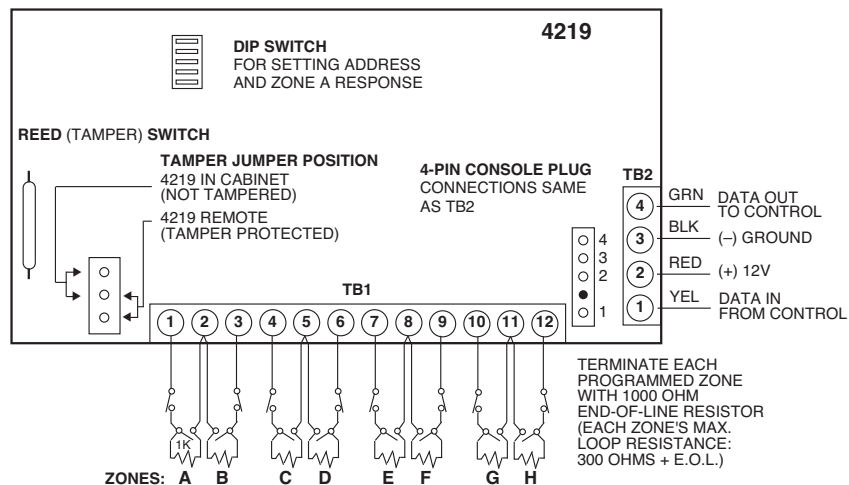

5-95% relative, non-condensing

Included items:

Eight 1K end-of-line resistors

Listings:

UL Listed to UL1610, UL1635, UL464, UL609, UL365, UL1641, UL985, UL1023

4229

Description:

Addressable eight-zone expander with two relay outputs for Honeywell ECP bus addressable systems

Product advantages:

Enhanced VISTA-128BP VISTA-250BP

The enhanced VISTA commercial panels are perfect in environments such as warehouses, schools, government offices and industrial locations. They provide up to 128 or 250 individual zone inputs for detection purposes. Users can split the building's protection to arm and disarm up to eight separate partitions, including a common partition, so you can separate the occupied areas from unoccupied areas, or the office from public areas. For example, this allows users to arm the administration offices while the classrooms are occupied after hours, or to arm the cafeteria after the delivery staff departs, while leaving the gymnasium disarmed for public activities. Optional remote status and control options allow building administrators to manage the system from home or other locations using an Internet browser, cell phone, PDA or other modern mobile device.

The wide variety of sensing devices that are compatible with the enhanced VISTA series make it an ideal sensing, indicating and monitoring system for intrusion detection, access control and environmental status like carbon monoxide, temperature, water and humidity. This allows the system to extend into additional important facility status indications that assist local building management and maintenance professionals.

The enhanced VISTA series provides nine on-board zone inputs and supports up to 119 or 241 V-Plex zone expansion devices and/or up to 127 or 249 wireless sensing devices. It is ideal for medium to large commercial and institutional locations.

SPECIFICATIONS (VISTA-250BPE specifications in parentheses)

Part numbers:

- VISTA-128BPE
- VISTA-250BPE
- VISTA-128SIAE

Capabilities:

- Users: 150 (250)
- User levels: 5
- History events: 512 (1000)
- Partitions: 8
- Access door readers: 8 (15)
- Outputs (relays): 96

User interfaces:

- Total keypads: 31

- CSFM Certificate Number: 7167-1645:108

VISTA Turbo

The Turbo Series VISTA commercial panels build on the feature set of the Enhanced VISTA series with faster performance, improved connectivity and greater expandability. In addition to the feature set of the Enhanced series panels, the Turbo Series provides a faster processor, support for V-Plex Smart Contacts, and performance-optimized software to enhance system responsiveness.

Turbo Series panels feature an on-board serial port (eliminating the requirement for the 4100SM Serial Module). This serial port operates at eight times the speed of the serial interface on Enhanced panels, providing a superior experience for integration applications such as WIN-PAK. Using the plug-in VT-SERCBL serial cable reduces wiring and troubleshooting time.

For large installations, all Turbo Series panels support six graphic touchscreen keypads (model 6272 or later) for easy, user-friendly operation of all system features.

Other new features specific to the Turbo Series include phone line cut detection (all models), automatic low-battery shutoff, eliminating the need for a separate battery supervisor module (all models) and enhanced home automation support (all models except VISTA-250BPT).

SPECIFICATIONS (VISTA-250BPT specifications in parentheses)

Communication and Remote Control

Communications

Honeywell is focused on providing the future of alarm communication solutions for the security industry. Alternative communication methods are critical in the marketplace due to the instability of VoIP communication paths, migration from POTS and growth of digital radio networks.

Total Connect Remote Service Applications

Your customers can stay connected...anytime, anywhere with Total Connect Remote Services, which let them control their systems remotely and receive important alerts about activity in and around their business. Now available with video!

COMMUNICATION AND REMOTE CONTROL

VISTA Interactive Phone Module

Description:

This module for any VISTA security system provides remote control access from any touch-tone phone. Customers can conveniently arm, disarm and check their security system status or conduct automation functions from any location.

Product advantages:

- Performs most keypad functions from a touch-tone phone locally or remotely
- System can be called to check the system status and arm/disarm security system remotely
- Operates relays or X-10 receivers on select VISTA panels to control lights and appliances
- Large vocabulary of words for voice descriptors

Power:

- 220mA
- 300mA with speakers attached

Product dimensions:

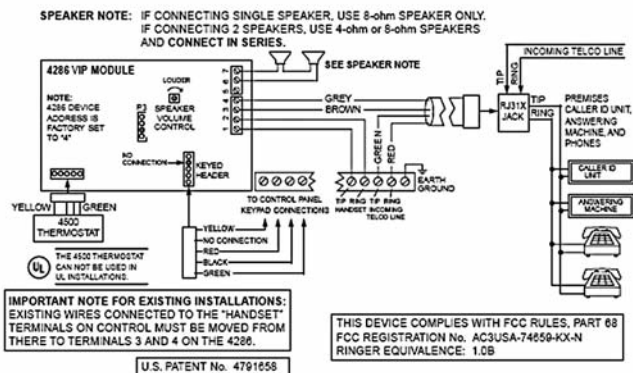

6.438" W x 1.25" H x 4.25" D

Compatibility:

Compatible with all VISTA panels

Listings:

UL Listed to UL1641, UL985

7845i-ENT

Internet Communicators

- IP downloading
- Internet or Private Network Applications
- Installs behind firewalls without compromising network security
- Full CID reporting
- Four-wire connection to compatible VISTA control panels
- Reduces redundant signal traffic
- Highest level of data security using 1,024-bit key encryption
- Optional 256-bit Advanced Encryption Standard FIPS 197 approved (for Department of Defense)
- Remote Control ready via optional Symphony services
- Dimensions: 7.5" W x 6.5" H x 1.5" D

- 6160 Keypad
- 7845i-ENT Internet Communicator

7847i

Honeywell's 7847i Series is the next generation family of IP communicators designed to meet today's demand for viable communication alternatives to POTS.

The 7847i delivers highly secure, reliable, Internet communication of alarm data while the 7847i-E is suitable for enterprise private network applications using local LAN or point to point connections.

Internet signals are delivered to Honeywell's AlarmNet Network Control Center, which routes the information to the appropriate central station. The state of the art AlarmNet Network Control Center is fully redundant and monitored 24/7. AlarmNet has the ability to route messages using the AlarmNet-A, AlarmNet-M, AlarmNet-i and 800 PLUS services, providing true redundancy and multi-path message delivery.

Features:

- **Secure IP reporting** – reports signals via Internet or Intranet (7847i-E only). Uses 256-bit Advanced Encryption Standard or optional 1,024 bit encryption with two-way authentication and no key exchange for maximum data protection.
- **Dialer Capture ready** – compatible with Dialer Capture Intelligence Device DCID or DCID-EXT (other control panels). Captures Contact ID messages from the panel's dialer and sends them to the central station via the IP communicator.
- **Universal control panel compatibility** – flexible modes of operation allow ECP full alarm reporting by Honeywell control panels, 4204 relay mode for Honeywell controls that do not support ECP alarm reporting and zone triggering for use with other control panels
- **Full Contact ID or ADEMCO high speed reporting** – ECP connection with compatible Honeywell control panels support full Contact ID reporting. All other modes use ADEMCO high speed reporting format.
- **Six input zones** – each zone can be configured for +V, -V, or EOLR triggering. Each zone can be programmed for inverted operation, delayed reporting and restoral reporting. Zone 1 can distinguish between pulsed and steady inputs (7847i/7847i-E).
- **Tamper protected enclosure** – built-in tamper sends a report when a tamper condition is detected and a restore when cleared
- **Remote services capability*** – control Honeywell control panels via Internet or mobile device and e-mail notification of system events
- **Network friendly** – installs behind firewalls without compromising network security – dynamic or static IP addressing
- **Ease of installation** – easy CAT-5 10 BaseT connection to a hub or router and quick connection to compatible Honeywell series control panels. Simple programming using a 7720P programmer, AlarmNet Direct website.
- **Upload/download with select Honeywell control panels** – requires Compass version 1.5.8.54a or higher

Listings:

COMMUNICATION AND REMOTE CONTROL

GSMHS

Honeywell is focused on providing the best alarm communication solutions for the security industry. Alternative communication methods are critical in the marketplace due to VoIP, migration from POTS and global growth of digital networks.

The GSMHS Digital Cellular Communicator offers full data reporting and uploading/downloading with most Honeywell control panels. In addition, the on-board zone inputs make the GSMHS compatible with other manufacturers' security panels as well. Honeywell communication products and control panels combine to make installations faster and easier.

All signals are delivered to Honeywell's AlarmNet Network Control Center, which routes the information to the appropriate central station. The state-of-the-art AlarmNet Network Control Center is fully redundant and monitored 24/7. AlarmNet has the ability to route messages using AlarmNet-i and 800 plus services, providing true redundancy and multi-path message delivery.

Honeywell's GSMHS High Security Communicator provides robust, reliable performance and meets the strict requirements of high security applications and UL line security standards. It is ideal for applications such as banks, jewelry stores, government buildings and other installations that require a 200-second communication path supervision rate to meet response demands.

Features:

- **Line security** – approved for line security applications with required supervision interval
- **Full Contact ID or ADEMCO**
- **High-speed reporting** – Contact ID reporting using ECP mode with compatible Honeywell control panels. ADEMCO HS when using zone mode.
- **256-bit AES encryption** – advanced encryption standard used for secure communications
- **Dual-path technology** – uses GPRS (General Packet Radio Service) as primary digital cellular path and automatically switches to SMS (Short Message Service) if GPRS is unavailable
- **Upload/download** – with select Honeywell control panels using GPRS. Requires Compass version 1.5.8.54a or higher.
- **Dynamic signaling with certain Honeywell control panels** – provides management of control panel dialer and digital cellular communicator. Programmable priority and delays determine signal path.
- **Diagnostic LEDs** – provide signal strength and status indications
- **QOS** – Quality of Service diagnostics via AlarmNet supply vital information including when a message was received, battery voltage, input voltage, signal strength and message path

- **Web-based programming** – allows complete interactive programming from AlarmNet Direct. <https://services.alarmnet.com/AlarmnetDirect>
- **Six input zones** – universal control panel compatibility using zone inputs
- **Remote services capability*** – optional Total Connect value-added web-based or SMS system control as well as e-mail notification of system events
- **Backup battery** – 6V, 3.1AH, Honeywell part number K14139 (included)

Listings**

- UL985: Household Fire Warning System Units
- UL1023: Household Burglar Alarm System Units
- UL365: Police Station Connected Burglar Alarm Units and Systems
- UL1610: Central Station Burglar Alarm Units
- UL1635: Digital Alarm Communicator System Units

*Requires Honeywell Total Connect Remote Services

**UL/cUL Listed to the above standards.
It is also suitable for Encrypted Line Security installations.

GSMV

Honeywell's Digital Cellular Communicators deliver secure, reliable and complementary digital communications via the GSM (Global System for Mobile) network. We use Dual-Path GPRS service with SMS backup.

This groundbreaking communications solution offers full data reporting and uploading/downloading with most Honeywell control panels. In addition, with on-board zone inputs and optional dialer capture capability, we're compatible with other manufacturers' security panels as well.

All signals are delivered to Honeywell's AlarmNet Network Control Center, which routes the information to the appropriate central station. The state-of-the-art AlarmNet Network Control Center is fully redundant and monitored 24/7. AlarmNet has the ability to route messages using AlarmNet-i and 800 PLUS services, providing true redundancy and multi-path message delivery.

Features:

- **Full contact ID or ADEMCO high-speed reporting** – contact ID reporting using ECP mode with compatible Honeywell control panels or combined with dialer capture for non-ECP capable control panels
- **256-bit AES encryption** – advanced encryption standard used for secure communications
- **Two-way voice transport** – GSM voice channel capable to allow two-way voice session in conjunction with an audio verification system
- **Dual-Path Technology** – uses GPRS (General Packet Radio Service) as primary digital cellular path and automatically switches to SMS (Short Message Service) if GPRS is unavailable
- **Upload/download with select Honeywell control panels using GPRS** – requires Compass version 1.5.8.54a or higher
- **Dynamic signaling with certain Honeywell control panels** – provides management of control panel dialer and digital cellular communicator. Programmable priority and delays determine signal path.
- **Diagnostic LEDs** – provide signal strength and status indications
- **QOS** – Quality of Service diagnostics via AlarmNet supply vital information including when a message was received, battery voltage, input voltage, signal strength and message path
- **Web-based programming** – allows complete interactive programming from AlarmNet Direct, [https://services.alarmpnet.com/AlarmNet Direct](https://services.alarmpnet.com/AlarmNet%20Direct)

- **Intelligent supervision** – any message generated serves as a supervision message per optional 24 hour or 30 day intervals. This feature effectively limits required messages to be sent.
- **Remote services capability*** – optional Total Connect value-added web-based or SMS system control as well as e-mail notification of system events
- **Universal control panel compatibility** – flexible modes of operation allow ECP alarm reporting by Honeywell control panels, 4204 relay mode for Honeywell controls (that do not support ECP alarm reporting) and zone triggering for use with other control panels
- **Dialer Capture ready** – compatible with Dialer Capture Intelligence Device DCID-EXT. Captures Contact ID messages from the panel's dialer and sends them to the central station via the GSM radio.
- **Seven input zones** – digital processing for improved detection and false alarm protection
- **Tamper protected enclosure** – built-in tamper sends a report when a tamper condition is detected and a restore when cleared
- **Built-in power supply** – on-board charging circuit design accommodates back-up battery. Includes primary power and battery supervision.
- **Back-up battery** – 6V 3.1Ah supplied to deliver up to 24 hours of standby operation

COMMUNICATION AND REMOTE CONTROL

iGSMV

Honeywell is focused on providing the future of alarm communication solutions for the security industry. Alternative communication methods are critical in the marketplace due to VoIP, migration from POTS and the growth of digital radio networks.

Honeywell's iGSMV delivers secure, reliable and complementary Internet and digital communications via the GSM (Global System for Mobile) network. Our exclusive, Triple-Path Communications solution combines Internet service with GSM for added reliability and an extra level of security, offering substantial benefits to protect your property.

Our GSM radio technology is unique in that it uses GPRS service for data and alarm communications and automatically switches to SMS for alarms if GPRS is unavailable. Through the Internet or radio, the iGSMV offers full data reporting and uploading/downloading with most Honeywell control panels. Plus, with zone inputs and optional dialer capture capability we're compatible with other manufacturers' control panels as well.

All signals are delivered to Honeywell's AlarmNet Network Control Center, which routes the information to the appropriate central station. The state of the art AlarmNet Network Control Center is fully redundant and monitored 24/7. AlarmNet has the ability to route messages using AlarmNet-i and 800 PLUS services, providing true redundancy and multi-path message delivery.

iGSMV (continued)

Features:

- **Universal control panel compatibility** – flexible modes of operation allow ECP alarm reporting by Honeywell control panels, 4204 relay mode for Honeywell controls (that do not support ECP alarm reporting) and zone triggering for use with other control panels
- **Dialer Capture ready** – compatible with Dialer Capture Intelligence Device DCID or DCID-EXT (other control panels). Captures Contact ID messages from the panel's dialer and sends them to the central station via the GSM radio.
- **Two-way voice transport** – GSM voice channel capable to allow two-way voice session in conjunction with an audio verification system
- **Seven input zones** – each zone can be configured for +V, -V, or EOLR triggering. Each zone can be programmed for inverted operation, delayed reporting and restoral reporting. Zone 1 can distinguish between pulsed and steady inputs.
- **Full contact ID or ADEMCO high-speed reporting** – ECP mode with compatible Honeywell control panels support full Contact ID reporting. All other modes use ADEMCO high-speed reporting format.
- **Tamper protected enclosure** – built-in tamper sends a report when a tamper condition is detected and a restore when cleared
- **Built-in power supply** – on-board charging circuit design accommodates back-up battery. Includes primary power and battery supervision.
- **Back-up battery** – 6V 3.1Ah supplied to deliver up to 24 hours of standby operation
- **256-bit AES encryption** – advanced Encryption Standard used for secure communications
- **Triple-Path Technology** – provides three paths of communication using Internet, GPRS (General Packet Radio Service) and SMS (Short Message Service). Uses Internet as primary with dual GSM technology as back-up. GSM path utilizes GPRS and automatically switches to SMS if GPRS is unavailable.
- **Upload/download with select Honeywell control panels using Internet and optionally GPRS** – requires Compass version 1.5.8.54a or higher
- **Dynamic signaling with certain Honeywell control panels** – provides management of control panel dialer and digital cellular communicator. Programmable priority and delays determine signal path.
- **Diagnostic LEDs** – provide signal strength and status indications
- **QOS** – Quality of Service diagnostics via AlarmNet supply vital information including when message was received, battery voltage, input voltage, signal strength and message path

*Requires Honeywell Total Connect Remote Services

AlarmNet-i Solutions

- Easy Installation
- Fast and Secure

Easy Installation

- Connect IP communicator to ECP buss, zone triggers or the dialer via the dialer capture module
- Connect to an available port on the router
- An IP address may be issued dynamically by the router (DHCP). A static IP address may also be used.
- Program account information into IP communicator using AlarmNet Direct programmer or 7720P
- Honeywell control panels may be downloaded using IP communication and Compass software

System Operation

- Once powered and connected, the IP communicator automatically seeks the AlarmNet servers in a private, secure and authenticated connection
- Port 443 is typically available for outbound secure Internet access
- No installation knowledge about encryption keys, network protocol, the firewall or other computer networking knowledge is required to complete the installation

Fast and Secure

- AlarmNet maintains fully AES encrypted secure connections to both the central station as well as the protected premise and only communicates in a totally authenticated and secure manner

AlarmNet-i solutions do not compromise the security of your router

- Opening IP server ports may allow malicious attacks on your network
- The chance for viruses on the computer are increased as is the likelihood of a post-sale service call

AlarmNet Dual-Redundant Network

Internet, Wireless Communications or POTS

- No encryption keys are ever transmitted – maximum data security is assured
- AlarmNet-i solutions only listen to AlarmNet and are resistant to typical attacks
- Typical response time, end-to-end to the central station, is under six seconds
- AlarmNet offers automatic technology rollover with re-transmission to the central station using any of three technologies including, Internet, Mobitex radio or 800 number POTS service

Professional Central Station

Total Connect Remote Service Applications

Differentiate Your Business

The ability to use common devices like cell phones and PDAs as an extension of their security system will appeal to a new generation of buyers who demand technologically advanced services and like to use their devices throughout the day.

Total Connect's comprehensive suite of value-added services are unmatched – making these exclusive new solutions an ideal way for you to differentiate your business.

Connect to Your Customers

With Total Connect, you can help your customers take advantage of all of the amazing benefits next-generation digital technology has to offer – including enhanced communication and the ability to stay connected to their businesses from anywhere in the world.

By simply logging on to a secure website, your customers can:

- Control their security systems via a virtual keypad using any web browser on a PC or via SMS on a PDA or cell phone
- Receive important alerts through various text messaging devices, including cell phones and PDAs
- Be notified of activity in various areas of their businesses
- Utilize optional video services to view activity occurring around the exterior or interior of their business

Here are some ways that you can use Total Connect with your system:

- Arm System
- Disarm System
- Modify User Codes
- Device Activation

Remote Notification Applications:

- System armed or disarmed
- Access to a sensitive or dangerous area
- Notification of power failure
- Notification of abnormal temperature
- Emergency alerts: hold-up and medical
- Maintenance call (NEW)
- Vending machine trouble notification
- HVAC water trouble notification
- Banking or ATM machine notification
- Safe/audit trail notification
- Sewer pressure switch notification
- Boiler preheat failure notification
- Grill hood suppression trouble/discharge notification
- Fire door shrinkage notification
- Chemical storage security notification

UNIQUE USER AND EVENT-INITIATED SERVICES

SMS Text Messaging

Any SMS text messaging device (cell phone, PDA) can control the system and receive information.

Your customers can:

- Request system status
- Arm or disarm the system
- Bypass specific zones and control outputs, such as relays and X-10 devices

E-Mail Notification

Personal reporting of system events can be conducted via e-mail to any capable device, including PDAs and cell phones.

Video Notification

When adding cameras to the system, users can receive video clips, pictures or a series of pictures when an alarm or pre-programmed event occurs in and around their home or business. These clips can be viewed on laptops, PCs,

smartphones or any compatible mobile device. Users can also initiate this process by requesting information via their mobile devices or viewing live, streaming video through a web browser.

Web-based Remote Control

- Controlled via a virtual keypad on any PC-based web browser
- Provides the ultimate convenience, control and flexibility since end-users can log in from any remote location

Stay Connected...Anytime, Anywhere!

At the heart of Total Connect is the unique virtual keypad, which can be accessed via a secure website. Whether at home, in the office or on the road, your residential and commercial customers can control their systems via PC's, compatible PDAs, web-enabled cell phones and more to stay connected to their businesses.

Works Exactly Like an Actual Keypad

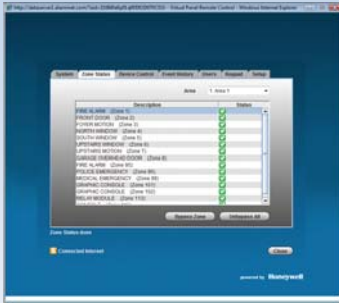

Offered only by Honeywell, the virtual keypad is an online version of an actual keypad – making it easy for users to control their security system and initiate real-time changes.

- Easy to use
- Audio verification
- Real time visual status
- Quick arming, disarming and bypass

TOTAL CONNECT FLEXIBILITY, CONVENIENCE AND CONTROL

Zone Management

- Easy edit of zone descriptions
- User definable descriptions
- Zone type selection

Users

- Manage users
- Easy addition and deletion of users
- Full user names

Optional Device Control

- Instant remote control of lighting
- Control door locks, garage door and more

Video...the Picture-Perfect Solution

Total Connect's optional video services let your customers view cameras remotely over the Internet – providing them with extra protection and peace of mind while providing you with a tremendous new sales opportunity!

Benefits:

- Connect remotely from anywhere in the world – all you need is Internet access
- Highest level of Internet security
- Look in and view MPEG4 format at 15 frames per second
- Store approximately 100 clips of ten frames each of JPEG images (up to 12 MB) on our server
- Send images via e-mail from any camera with just one touch

To find out more about **Total Connect**, contact your Honeywell District Manager.

Total Connect Mobile Application

Your key to security, convenience and control.

Total Connect's remote keypad feature works just like a security system keypad. With the tap of a finger, your customers can control their security systems, receive text messages and e-mail alerts and view live video, event-driven video clips and pictures of their businesses remotely when using their laptops, smartphones or compatible mobile devices. They can even download free Apps for their BlackBerry®, iPhone®, iPad™, iPod touch® or Android™.

Apple, iPad, iPhone and iPod touch are trademarks of Apple, Inc. All other trademarks and logos are properties of their respective owners.

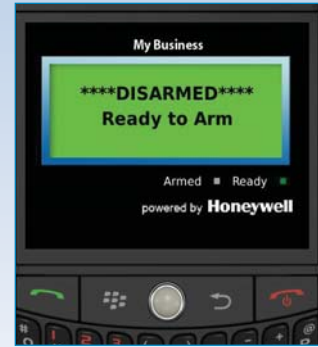

CONVENIENCE AND CONTROL AT YOUR FINGERTIPS!

Arm and check the status of your security system

Disarm and silence your system

Bypass a door for unscheduled maintenance or service

Commercial Security Solutions

Turn lights on and off remotely

Control garage or warehouse doors

Communication Solutions for Every Business

Just because your customers are out of the office doesn't mean they have to be out of the loop. When they put Total Connect to work, they'll have the critical information they need to help manage their business, their employees and even the unexpected.

Wherever they are, business owners can:

- Observe employee performance, productivity and behavior
- Know exactly what time their business opens in the morning and closes at night
- Supervise voids, resales and returns by monitoring cash registers with live video or recorded snapshots
- Protect inventory, avoid disruption of business and create a safer working environment by being alerted to floods and leaks
- Prevent food spoilage and protect inventory by knowing when extreme hot or cold temperatures have been detected
- Observe consumer shopping habits and activity
- Protect expensive merchandise, office equipment, electronics and other indoor valuables by receiving an e-mail or video clip when they have been moved or disturbed
- Find out what days are better for business by tracking exactly when customers enter or exit their establishments
- Manage high employee turnover by assigning and canceling access codes in an instant

Agency Standards (U.S.)

UL365 – Police Station Connected Burglar Alarm Units and Systems

These requirements cover construction, performance and maintenance of police station connected burglar alarm units and systems for use in mercantile premises, mercantile safes and vaults, and bank safes and vaults.

As covered by these requirements, a police station connected alarm system consists of protective circuits and devices, connected through a control apparatus to an enclosed tamper-protected sounding device mounted on an outside or inside wall of the building in which the protected property is situated, and a constantly-manned police department. Intrusion into or disturbance of the units or wiring causes the sounding device to be actuated and a signal to be transmitted to the police department. The sounding device and signal to the police department continue to operate until it is stopped by using the proper control key, by exhaustion of the power supply, or by action of an automatic timing element that is preset for a definite operating period.

UL609 – Standard for Safety for Local Burglar Alarm Units and Systems

These requirements cover construction, performance and maintenance of local burglar alarm units and systems for use in mercantile premises, mercantile safes and vaults, and bank safes and vaults.

As covered by these requirements, a local alarm system consists of protective circuits and devices, connected through a control apparatus to an enclosed tamper-protected sounding device mounted on an outside wall of the building in which the protected property is situated. Intrusion into or disturbance of the units or wiring causes the sounding device to be actuated. The sounding device continues to operate until it is stopped by using the proper control key, by exhaustion of the power supply, or by action of an automatic timing element that is preset for a definite operating period.

UL864 – Control Units for Fire Protective Signaling Systems

These requirements cover electrical control units and accessories for fire-protective signaling systems to be employed in ordinary indoor locations.

A control unit as covered by these requirements consists of a unit assembly of electrical parts having provision for the connection of power supply circuits routed through the control unit equipment by a prescribed scheme of circuiting. The circuits are extended to separate devices by which the operating part of the control unit are actuated for signals, and to separate and/or integral devices by which the signals are indicated so as to form a coordinated system combination for definite signaling services. An installation wiring diagram attached to the control unit, or referenced in the control unit marking, indicates the devices and circuits which are acceptable for connection to the control unit in the field.

UL985 – Household Fire Warning System Units

These requirements cover household fire warning system control units intended to be installed in accordance with the National Fire Alarm Code.

A household fire warning system control unit consists of a unit assembly of electrical parts having provision for connection of power supply and initiating device circuits. Provision for connection of an indicating device circuit is also required unless an alarm sounding device is integral with the control unit. Additional terminals may be provided for the connection of supplementary devices, such as annunciators, remote switches and the like. A secondary supply, such as a battery, may be provided integral with the control unit or provision may be provided for its connection to the control unit.

UL1023 – Household Burglar Alarm System Units

These requirements cover burglar alarm system units intended for use in residences to protect a complete multi-room residence, one room of a residence, or one opening or area in a residence.

Household burglar alarm system units covered by these requirements consist of one or more unit assemblies of electrical components that are designed to detect the presence, movement, sound, or other activity of an intruder. Provisions are made for the connection of a power supply, remote control and signal circuits by a prescribed method of wiring.

UL1610 – Central Station Burglar Alarm Units

These requirements cover components of central station burglar alarm systems intended and specifically designated for burglary protection use at mercantile and banking premises, on mercantile safes, and on bank safes and vaults.

The components covered by these requirements are intended for use in a burglar alarm system in which the operations of electrical protection circuits and devices are transmitted automatically to, recorded in, maintained and supervised from a central station that employs trained operators and alarm investigators who are in attendance at all times.

UL1635 – Standard for Safety for Digital Alarm Communicator System Units

These requirements cover digital alarm communicator system units for use in central station burglar alarm systems, proprietary burglar alarm systems, police station connect burglar alarm systems, residential burglar alarm systems, residential fire warning systems and home health care medical alert systems.

As covered by these requirements, a digital alarm communicator system consists of a digital alarm communicator transmitter interconnected to or integral with: a) a central station burglar alarm control unit, b) a proprietary burglar alarm control unit, c) a police-station-connect burglar alarm control unit, d) a residential burglar alarm control unit, e) a residential fire warning control unit, or f) a home health care medical alert control unit. A need for off premises transmission will activate the digital alarm communicator transmitter that contacts a digital alarm communicator receiver located at a central station or residential monitoring station through the telephone company's switched network (dial system) and transmits a message identifying the change in condition at the protected premises or residence.

Communications Device Agency Listings (Canada)

ULC-S303 Standard for Local Burglar Alarm Units and Systems

These requirements cover design and construction, performance and maintenance of local burglar alarm units and systems for use in mercantile premises, mercantile safes and vaults, and bank safes and vaults. Products listed to this standard will be found in the ULC Burglar and Fire Alarm System and Components Directory.

ULC-S304 Signal Receiving Centre and Premise Burglar Alarm Control Units

This standard covers construction and performance requirements for signal receiving centre burglar alarm control units, including signal receiving, recording and supervisory control units intended for permanent use within a signal receiving centre. It also covers associated burglar alarm control units to be installed within mercantile and banking premises and on safes and vaults for protection against burglary. These requirements also serve as the basis of classification of signal receiving centre burglar alarm control units. Requirements covering complete control units are contained in CAN/ULC S301, Standard for Central and Monitoring Station Burglar Alarm Systems. Products listed to this standard will be found in the ULC Burglar and Fire Alarm System and Components Directory.

ULC-S545 Residential Fire Warning Alarm Systems Control Units

Covers requirements for residential fire warning system control units and accessories intended to be installed in accordance with the Standard for the Installation of Residential Fire Warning Systems, CAN/ULC-S540. Products listed to this standard will be found in the ULC Burglar and Fire Alarm System and Components Directory.

ULC/ORD-C1023 Burglar Alarm System Units, Household

These requirements cover household burglar alarm system units intended for use in residences.

ULC-S559 Equipment for Fire Signal Receiving Centres and Systems

This standard covers requirements for fire signal receiving centres and systems which include transmitting, receiving equipment and proprietary fire signal receiving centre equipment and control unit accessories.

Compass Software

Honeywell's Compass Downloader for Windows® takes security system programming to a whole new level. The network compatible software solution provides a quick and easy method for communicating with VISTA control panels.

Compass Downloader (Versions 1.5.8 and 2.0)

Software for Microsoft Windows®

- Allows operator to access, program and control any VISTA control panel over normal telephone lines or via iP/GSM communicators
- Compass features include:
 - Account change/history
 - Advanced error check/on-screen help
 - Fully networkable
 - Exclusive panel feature search
 - Unlimited system templates
 - Multiple user-definable fields
 - Unattended/unsolicited mode

Program Features:

- **Change/History** – reviews all system changes initiated by the download operator within the current session. A complete record of system modifications and the history of an account is also available.
- **Error Check** – technology incorporated into Compass guides you through system programming. To ensure proper panel set-up, an error checking feature monitors programming and provides on-screen error alerts.
- **Help** – an on-screen help bar is displayed along the bottom of each screen for prompt assistance. Programming field numbers within each screen provide easy reference to the program sheet for installation and service.

- **Networkable** – completely network compatible, Compass is engineered to accommodate up to 255 users. Multiple users may access the program and download simultaneously. Compass runs on Peer-to-Peer and LAN based networks such as Novell® and Lantastic®. Each workstation must use its own modem.
- **Search Engine** – allows quick and easy access to panel features. Simply type the desired feature name or the programming field number and the system will bring you directly to the appropriate screen, folder and feature location.
- **Templates** – unlimited templates allow for design of master accounts which result in a selection of options to expedite set-up
- **User-definable fields** – gives the option to customize your accounts screen. Gather and display the information most important to your company.
- **Minimum System Configuration Requirements for Compass 1.5.8:**
 - Pentium® or better PC
 - 128 MB/256 MB RAM
 - 200 MB available disk space
 - CD-ROM drive or Internet/network access
 - Microsoft Windows® 95, 98, ME, NT, XP, 2000
 - 800 x 600 minimum display resolution
 - When using Compass on a network, a network speed of 100 Mbps is recommended

Compass 2.0

System Configuration Requirements for Compass 2.0

System Attributes	Minimum	Recommended
Processor	Intel® Pentium® II - 256 MB RAM	Intel® Pentium® IV, 512 MB RAM (or above)
Disk Space (Free)	1 GB	>>1 GB
Monitor Resolution	800 X 600	1024 X 768

Application	Version
Operating System	Microsoft Windows 2000® (All service packs), Microsoft Windows XP Professional® (Service Packs 2 and 3) Microsoft Windows Vista® 32-bit (Ultimate & Premium) Microsoft Windows 7
Database Application	MS SQL Server or MS Access 2.0 if using Windows XP or below MS SQL Server or SQL Express if using Windows Vista
Microsoft Internet Explorer®	5.5 and above

- **The new Compass 2.0 configuration window is designed for fast, efficient access to information** – its user-centric design makes features such as account creation and configuration more intuitive. Context sensitive F1 help provides immediate answers to feature inquiries, and searches can be performed based on Feature Groups.
- **Compatible with the latest Operating Systems** – Compass 2.0 works with Microsoft Windows XP, Microsoft Windows Vista and Microsoft Windows 7
- **Save time** – there is no need to wait for an ongoing job to be completed. The user can execute multiple commands using dial-up and Ethernet simultaneously with scheduling.
- **Upgrade from the old** and legacy access databases to faster and better SQL. There is a tool provided that automatically migrates to SQL.
- **Save time and effort** with Mass Configuration

All trademarks are properties of their respective owners.

Compass Software

Compass Features

v1.5.8

v2.0 & later

Compass Features	v1.5.8	v2.0 & later
Single communication server for all panels (providing uniformity)		✓
Cancel a command that is currently under execution		✓
Drag and drop of multiple commands simultaneously		✓
Configure a panel and schedule jobs for other accounts without closing panel window (multitasking)		✓
Export subscriber with report format from shell		✓
Automatic saving of event logs to the database (unattended mode)		✓
Utility to generate reports on panels and accounts usage (categorizing in summary report of panel types)	✓	✓
View and export activity log in Interactive mode	✓	✓
Print all your customer information from customer account screen at once		✓
“Change and Compare” screen gives the ability to confirm changes prior to download		✓
View last retrieved panel status in interactive mode (improved feel in 2.0)		✓
Communicate with up to five panels using TCP and dial-up simultaneously		✓
Activity log displays Caller ID information in the Scheduler Activities Viewer (more information available to user)		✓
Save unattended activity logs in text mode (file) for later detailed analysis		✓
See details of the job in queue in unattended mode		✓
Modify user input and reschedule unattended batch job	✓	✓
Windows XP® support	✓	✓
Windows VISTA support		✓
Windows 7®* support		✓
Context Sensitive Help, F1 (detailed help screen)		✓
MS SQL Server Support (licensed version)	✓	✓
MS SQL Express (free version) bundled with Compass 2.0		✓
Netload TBD next revision	✓	

*Honeywell has designed Compass 2.0 to be compatible with the latest version of Microsoft Windows 7®.

Expansion Modules

Expanding Your System Capabilities

Honeywell's wide range of expansion modules enable you to configure a system to meet any installation challenge and help end-users take full advantage of their security system features.

How to route cables when using V-Plex addressable systems

As a system designer, you need the maximum number of options available when it comes to connection strategies. Honeywell VISTA V-Plex addressable systems adapt to your connection strategy by offering you three ways to connect devices to the system. In your design, use one or all of these flexible connection methods in the same system.

Bus-line T-tap Connection Strategy

Using this method, route a bus line from the control panel to the far end of the protected building. At locations closest to sensors, tap into the bus and connect a two-wire jumper between the bus and the V-Plex compatible device.

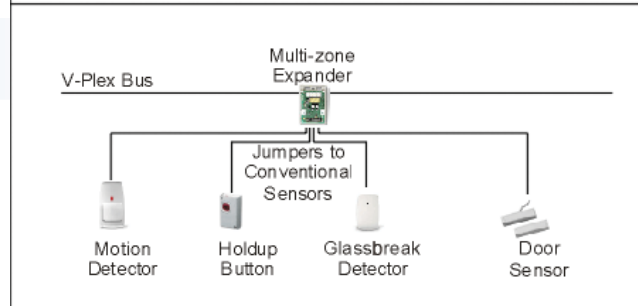

Jumping from Device to Device

This method allows you to route an 18AWG, two-wire, twisted pair cable from the control panel to the first V-Plex compatible device, then to another and then another in a chain of addressable devices.

Grouping Devices Together at Multi-Zone Input Expanders

When using powered devices or when you have a number of devices within close proximity to one another, you can use conventional detection devices and connect them to a zone expander with one or more inputs. The zone expander is connected directly to the V-Plex bus. From the zone expander, route jumpers to detection devices.

V-Plex Bus

The V-Plex bus connects directly from terminals at the control panel and routes throughout the facility to distant V-Plex detection devices and expansion accessories. Recommended cable for the V-Plex bus depends upon the length of the cable and the current draw required for detection devices that are connected to the cable. Usually, a two-wire, twisted pair, 18AWG, non-shielded cable meets the needs for even the largest V-Plex system (see Table 2 on page 49). It is best to route V-Plex bus cabling at least six inches from AC power, telephone or intercom cabling.

Designing a V-Plex system is easy. Just follow these simple steps:

1. Choose V-Plex devices for detection in the facility
2. Total the current draw from all devices connected to the bus (see Table 1 on page 48)
3. Total the cable distances and choose the cable gauge (see Table 2 on page 49)
4. Deploy the system

V-Plex Addressable Sensors and Output Devices

V-Plex sensors include a built-in addressable device. All native V-Plex addressable sensors, whether powered or non-powered, use a two-wire connection to the V-Plex bus. This connection provides both power and data to the device, as each of these is supplied by the V-Plex cable for native devices.

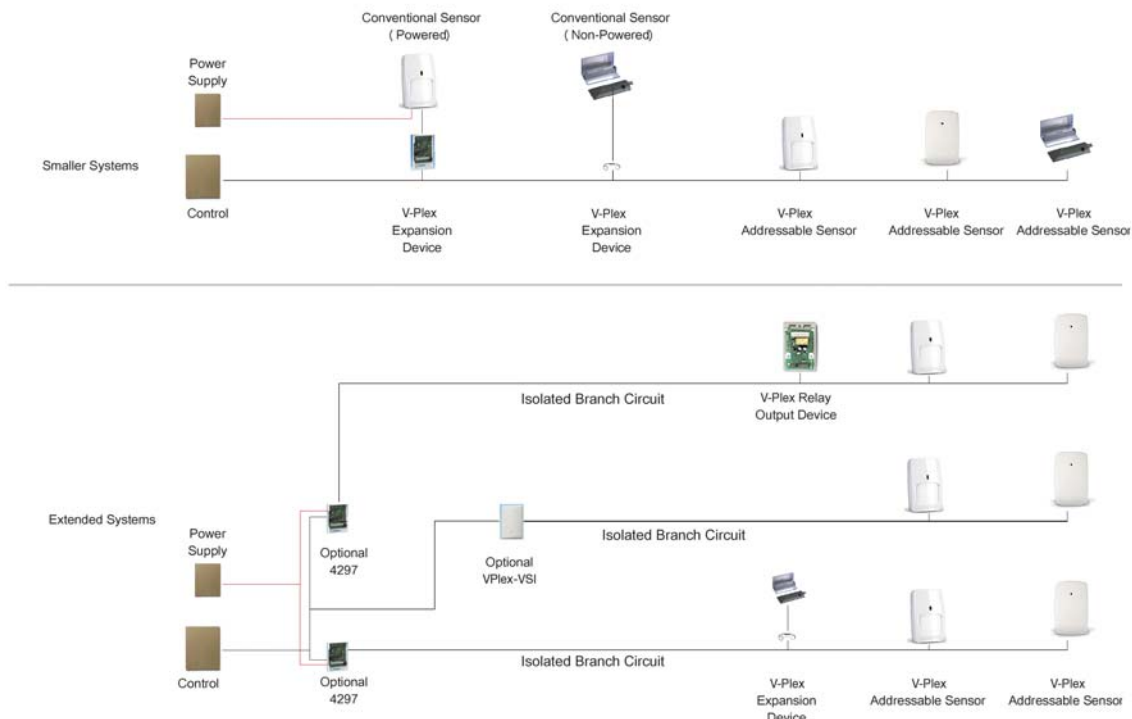

Table 1: Current draw for V-Plex devices

PRODUCT	DESCRIPTION	MAX. CURRENT DRAW	COMMENT
Motion Detectors			
IS2500SN	PIR SMART Motion Sensor with Tamper, S/N	1.6mA LED Disabled 4.7mA LED Illuminated	Disable the LED for best power performance.
DT7500SN	DUAL TEC SMART Motion Sensor with Tamper, S/N	3.0mA LED Disabled 6.0mA LED Enabled	Disable the LED for best power performance. This unit draws 6.5mA on initialization.
Door Contacts			
4939SN-WH	Contact, Surface, S/N	0.5mA

4959SN	Contact, Door, Overhead, S/N	0.5mA	
Fire Alarm Devices			
5193SD	Smoke Detector, Photo, S/N	1.2mA (when LED blinks) 2.8mA (when LED is on cont)	LED normally blinks every 15-20 seconds. System Control determines if LED is on continuously.
5193SDT	Smoke Detector, Photo, Heat Sensor, S/N	1.2mA (when LED blinks) 2.8mA (when LED is on cont)	LED normally blinks every 15-20 seconds. System Control determines if LED is on continuously.
Expansion Devices			
4208SNF	6 Class B Zones, 2 Class A Zones or S/N	33.6mA	Float unused loop inputs.
4101SN	1 Form C Relay, 1 class B zone + Tamper, S/N	8.0mA	
4190SN	1 Supervised Zone, 1 Unsupervised Zone, + Tamper, S/N	2.2mA	
4191SN-WH	Contact, Recessed, S/N	0.5mA	
4193SN	SIM, 1 Supervised Zn, 1 Unsupervised Zn, S/N	1.5mA	
4208SN	8 Supervised Class B Zones + Tamper, S/N	33.6mA	Float unused loop inputs.
4208U	8 Supervised Class B Zones + Tamper, DS or S/N	33.6mA	Float unused loop inputs.
4209U	4 Two Wire Smoke Zones, DS or S/N	12mA + 1.0mA for each used output trigger	Requires 20 mA per used input from external power source. Float unused trigger outputs.
4293SN	SIM, Mini, 1 Unsupervised Zone, S/N	0.5mA	
4297	Polling Loop Extender/Booster/Isolator Module	0.1mA	Requires 50 mA @12 VDC from panel aux or local power source.

Table 2:
Cable distances based upon current draw and cable gauge

(If using shielded cable, divide these values in half)

Total Load (mA @ 11.5 VDC)	22 AWG	20 AWG	18 AWG	16 AWG
1-8 mA	12,000 feet	12,000 feet	12,000 feet	12,000 feet
9-16 mA	7,270 feet	11,710 feet	12,000 feet	12,000 feet
17-24 mA	4,850 feet	7,810 feet	12,000 feet	12,000 feet
25-32 mA	3,640 feet	5,850 feet	9,260 feet	12,000 feet
33-40 mA	2,910 feet	4,680 feet	7,410 feet	11,760 feet
41-48 mA	2,420 feet	3,900 feet	6,170 feet	9,800 feet
49-56 mA	2,080 feet	3,350 feet	5,290 feet	8,400 feet
57-64 mA	1,820 feet	2,930 feet	4,630 feet	7,350 feet
65-72 mA	1,620 feet	2,600 feet	4,110 feet	6,540 feet
73-80 mA	1,450 feet	2,340 feet	3,700 feet	5,880 feet
81-88 mA	1,320 feet	2,130 feet	3,370 feet	5,350 feet
89-96 mA	1,210 feet	1,950 feet	3,090 feet	4,900 feet
97-104 mA	1,120 feet	1,800 feet	2,850 feet	4,520 feet
105-112 mA	1,040 feet	1,670 feet	2,650 feet	4,200 feet
113-120 mA	970 feet	1,560 feet	2,470 feet	3,920 feet
121-128 mA	910 feet	1,460 feet	2,310 feet	3,680 feet

V-Plex Expansion Devices

V-Plex addressable technology can be made compatible with off-the-shelf conventional detectors whether powered or non-powered. Conventional detectors use a relay or a dry contact output for connection to a system zone input. Zone input devices, such as the eight-zone 4208SN (see page 56) and the two-zone 4193SN (see page 55) zone input module allow the connection of conventional device outputs to the system using zone inputs at the expansion module.

The panel supports up to 128mA of current for devices connected to its V-Plex loop. These devices can include door and window contacts, motion detectors, hold-up buttons, glassbreak detectors and other items. When you load devices on the V-Plex loop, never exceed 64mA of total device current on any single run. When using multiple loops, never exceed a maximum cumulative total of 128mA for all cable runs added together.

V-Plex is a flexible design strategy. The control panel can be located anywhere on the V-Plex loop. When locating the panel in the center of the loop, be sure that the total current draw from devices does not exceed 128mA.

Non-Powered Conventional Sensors

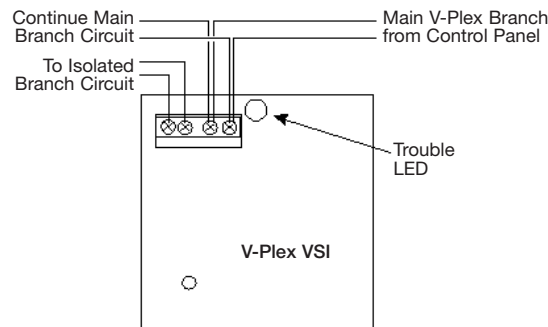

Conventional devices that require no power, such as door and window contacts or holdup buttons can simply connect to the V-Plex expansion device using two wires for the zone input. These non-powered devices require only a two-conductor cable between the detection device and the expansion module. There is no need to route additional cable for power.

Powered Conventional Sensors

Conventional devices that require power, such as motion detectors and glassbreak detectors must not only connect to the V-Plex expansion device using two wires for the zone input, but must also be supplied a power input from the control panel or remote power supply. In cases like these, route a four-wire cable from the detector. Two of the conductors connect between the detector's alarm output terminals to the zone input terminals on the expansion device. The remaining two conductors will connect between the detector's power input terminals and the distant power supply output terminals.

Isolating V-Plex Branch Circuits with a V-Plex VSI Module

In larger systems, it is desirable to provide optional isolation for major branch circuits. Isolation protects the largest part of the system, keeping it operating when a branch circuit becomes inoperable due to shorted, overloaded or grounded bus cabling. Honeywell offers the VPLEX-VSI Module to provide isolation for the V-Plex Bus (see page 59).

Extending the System Cabling Distances with a 4297 Extension Module

In larger facilities you may need to route cables longer distances or connect additional detection devices to maximize detection coverage within the building. In cases like these, use one or more model 4297 V-Plex extension modules (see page 58). The 4297 module injects additional 128mA of current into the V-Plex bus for powering V-Plex devices. It also provides isolation for major branch circuits from cables that are shorted, overloaded or grounded.

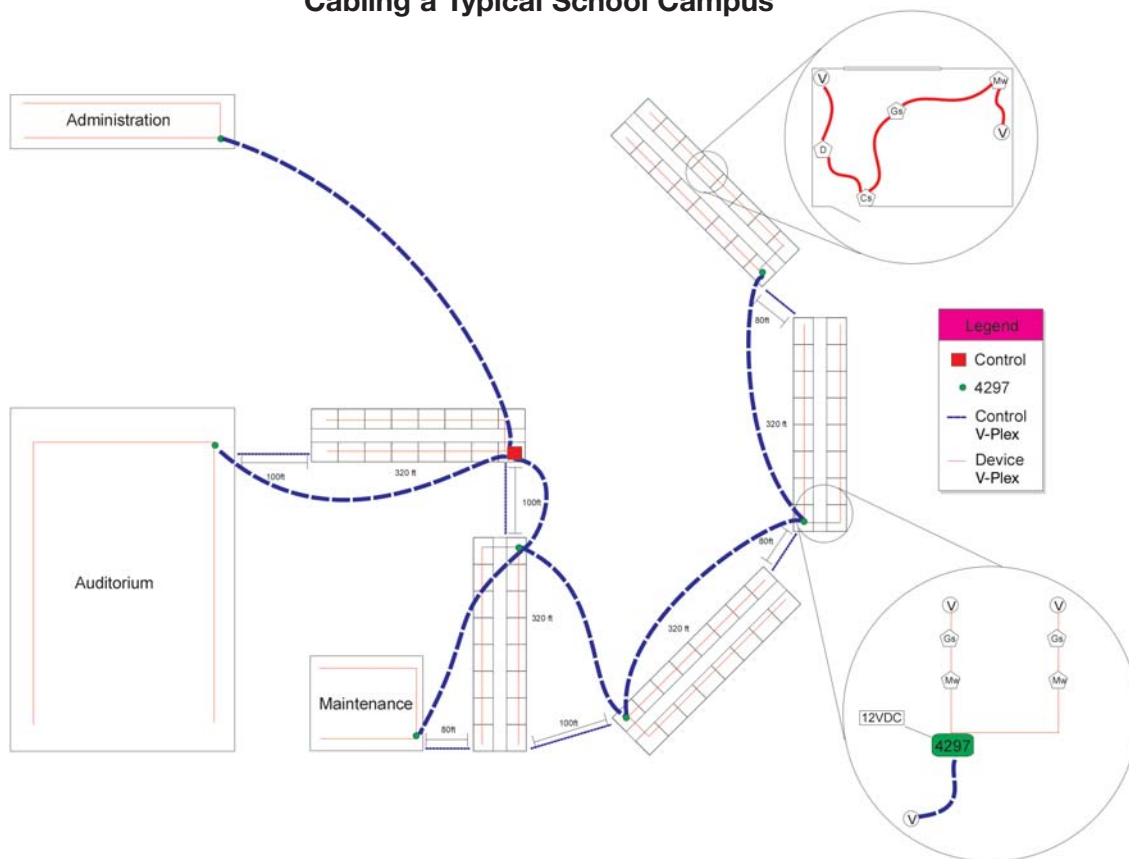

Honeywell supports a maximum distance of 12,000 feet for extending the V-Plex bus. This distance includes the combined distance of the panel-side loops (PL shown in the diagram above), which is the cabling between the panel and 4297 modules. This is added to the distance of the cable extending from each 4297 module to detection devices (DL shown in the diagram above). The illustration on page 52 provides an example of a typical V-Plex bus layout in a school.

V-Plex Expansion Devices (continued)

Keep the panel-side and device-side loops separate: When designing your system with 4297 extension modules, never add a 4297 module on the device-side loop of another 4297 extension module. Each 4297 input must connect directly to the control panel or another 4297 module input. The diagram below shows a dashed dark blue line representing the panel-side bus, which connects the panel to the 4297 modules. Notice that devices are arranged together on the far side of the 4297 module, shown in the illustration as a red line.

Cabling a Typical School Campus

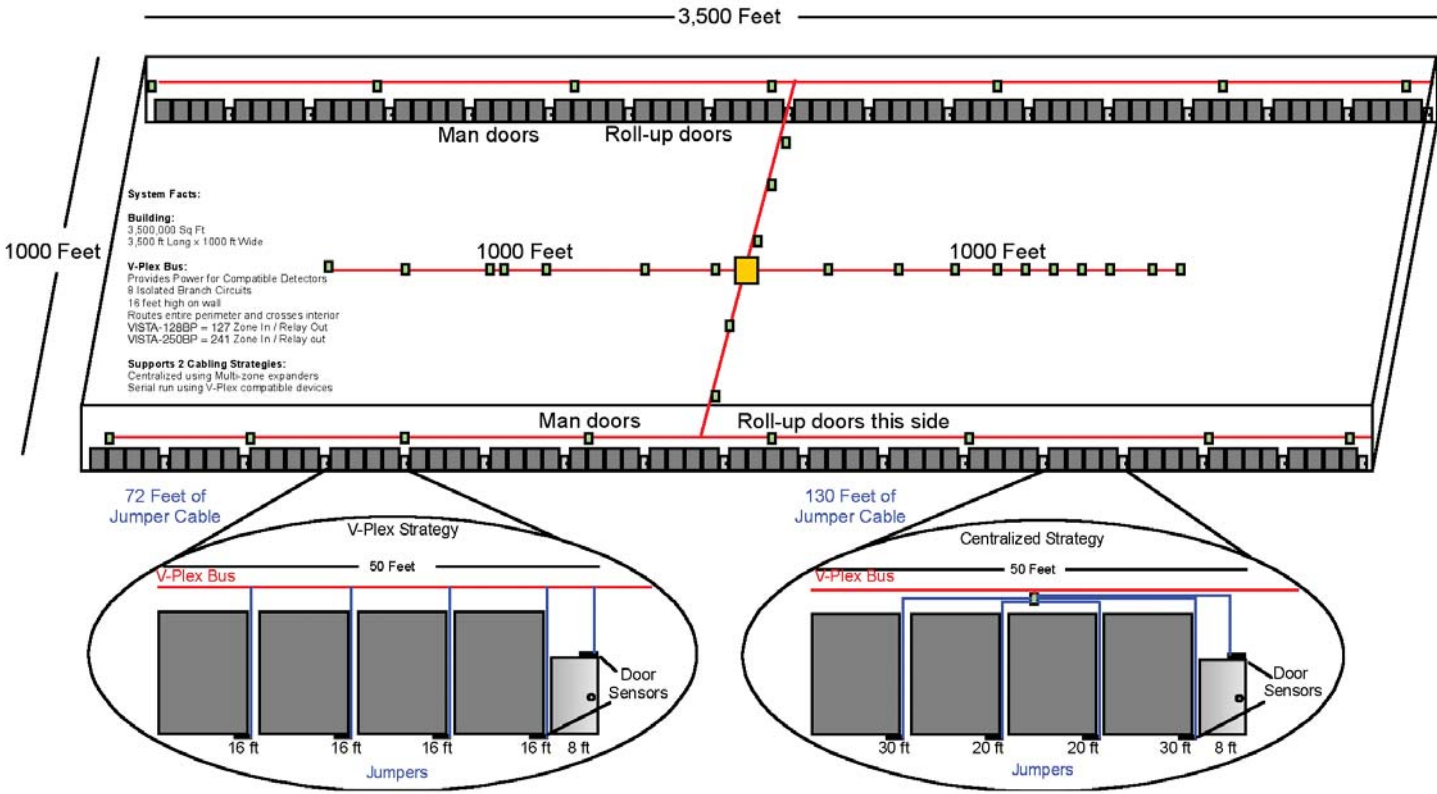

Never exceed 128mA on any V-Plex bus: Just like the control panel, each 4297 supports up to 128mA of current on its device-side loop (two loops with up to 64mA current max). Exceeding 128mA on the control panel terminals or on any 4297 will likely cause malfunctions due to low power on the V-Plex bus.

Reducing the current draw of far-side devices: The 4297 module can support up to 128mA of current for devices on its far side (or device loop). The benefit that the 4297 brings is that it reduces the total current draw of far-side devices down to 1mA against the panel's V-Plex current calculation. This allows you to place multiple 4297 modules at distant locations throughout the building when needed to extend the distance of system V-Plex bus cabling.

The flexibility of the V-Plex addressable system

V-Plex is so flexible that it can be used in most building applications. From small retail shops and professional offices to large distribution centers, V-Plex can go the distance, allowing you to connect zone inputs, relay outputs and VistaKey access door controllers anywhere along the bus. With proper use of extension modules, you can connect devices in a bus extending up to 12,000 feet. To gain an understanding of a large V-Plex application, see the illustration below.

V-Plex Cabling Strategies
How large of a building will V-Plex Cover?

Does V-Plex really make a difference in cable costs?

In large projects, your connection strategy can make a dramatic difference in the overall cost of system cable. Take a look at how much cable you save when using native V-Plex devices on the left, while on the right we used conventional devices connected to a multi-zone expander. How are your jumpers adding up?

4190SN

Description:

Addressable two-zone expander for Honeywell V-Plex addressable systems

Product advantages:

Connect external devices anywhere that the V-Plex bus can reach

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system

Included items:

- Housing
- 10K EOL resistor

Mounting options:

Screw-mounted to a flat surface

General application:

Provides status of conventional sensing devices, such as doors, windows and motion sensors

Compatibility:

V-Plex

Product dimensions:

3.25" H x 2.125" W x 1" D

Listings:

- UL/ULC Listed to UL864, UL985, UL1610, UL609, UL365, UL1023
- ETL/cETL Listed to UL864, CAN/ULC-S304

4293SN

Description:

Addressable one-zone expander for Honeywell V-Plex addressable systems

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Converts any normally closed conventional detection device to an addressable device. Conventional detector must provide dry-contact output.
- System automatically learns device serial number so no DIP switch addressing is required
- Small size fits easily into most sensing detector enclosures or splice boxes
- Adds one normally-closed zone input to a V-Plex addressable system
- Supervised for open or normal circuit conditions
- UL Listed for commercial burglary alarm applications

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system

Mounting options:

- Fits well inside the detector's enclosure or in an adjoining electrical splice box
- Mount within three feet of detector for UL Listed applications
- Locate anywhere along the V-Plex bus

Compatibility:

- All VISTA control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Not compatible with VISTA-20P control panels

Product dimensions:

0.25" W x 1.75" L

Power:

Supplied by the control panel's two-wire V-Plex Bus: 1mA at 7-11VDC

Temperature:

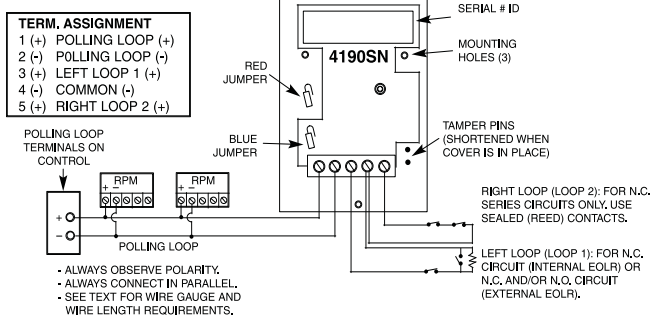

20° F to 105° F (-7° C to 40.5° C)

Humidity:

5-95% relative, non-condensing

Listings:

UL/cUL Listed to UL1610, UL1635, UL464, UL609, UL365, UL1641, CAN/ULC-S525, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-C1023

4193SN

Description:

Addressable two-zone expander for Honeywell V-Plex addressable systems

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Converts any conventional detection device to an addressable device. Conventional detector must provide dry-contact output.
- System automatically learns device serial number so no DIP switch addressing is required
- Small size fits easily into most sensing detector enclosures or splice boxes
- Two zone inputs: one supervised with 10K EOL resistor, one unsupervised loop
- Loop 1 provides a broad, 300 ohm tolerance
- Supervised for open, shorted or normal circuit conditions
- UL Listed for commercial burglary and fire alarm applications

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system

Mounting options:

- Fits well inside the detector's enclosure or in an adjoining electrical splice box
- Mount within three feet of detector for UL Listed applications
- Locate anywhere along the V-Plex bus

Compatibility:

- All VISTA control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Not compatible with VISTA-20P control panels

Product dimensions:

0.625" W x 2.5" L

Included items:

10K end of line resistor for loop 1

Power:

Supplied by the control panel's two-wire V-Plex Bus: 1.5mA at 7-11VDC

Temperature:

20° F to 105° F (-7° C to 40.5° C)

Humidity:

5-95% relative, non-condensing

Listings:

- UL Listed to UL365, UL464, UL609, UL864, UL1610, UL1635, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-S527
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645-127

4208SN

Description:

- Addressable eight-zone expander for Honeywell V-Plex addressable systems
- DIP switch selection of serial numbers
- Eight class B zone inputs
- 32 serial number groups to choose from

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Converts any conventional detection device to an addressable device. Conventional detector must provide dry-contact output.
- Provides tamper protection
- Adds up to eight inputs to a V-Plex addressable system
- Eight class B loops, each supervised by 10K ohm resistor
- Loops provide a broad, 300 ohm tolerance
- Supervised for open, shorted or normal circuit conditions
- UL Listed for commercial burglary and fire alarm applications

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system when using a centralized connection approach

Mounting recommendations:

On a flat surface, centrally located to collect up to eight zones from nearby detectors

Compatibility:

- All VISTA control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Not compatible with VISTA-20P control panels

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

- Supplied by the control panel's two-wire V-Plex bus: 33.6mA at 8-11VDC (0.6mA when powered externally)
- External power supply option: 33.6mA at 12VDC (all loops shorted)

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

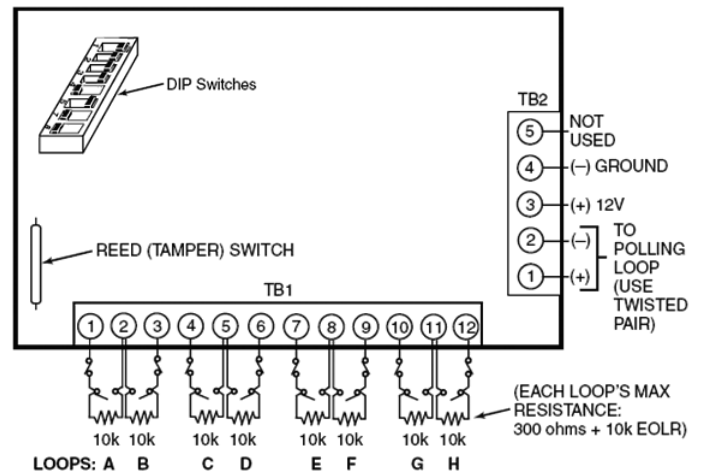

5-95% relative, non-condensing

Included items:

Eight 10K end of line resistors

Listings:

- UL/cUL Listed to UL1610, UL1635, UL464, UL609, UL365, UL1076, UL1637, UL1641, UL864, UL985, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CSA-C22.2 No.205, CAN/ULC-S545
- CSFM Certificate Number: 7300-1645:131

4208U

Description:

- Addressable eight-zone expander for Honeywell V-Plex addressable systems
- DIP switch selection of serial numbers
- Eight class B zone inputs
- 16 serial number groups to choose from

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Converts any conventional detection device to an addressable device. Conventional detector must provide dry-contact output.
- Provides tamper protection
- Adds up to eight inputs to a V-Plex addressable system
- Eight class B loops, each supervised by 10K ohm resistor
- Loops provide a broad, 300 ohm tolerance
- Supervised for open, shorted or normal circuit conditions
- UL Listed for commercial burglary and fire alarm applications

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system when using a centralized connection approach

Mounting recommendations:

On a flat surface, centrally located to collect up to eight zones from nearby detectors

Compatibility:

- All VISTA control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Not compatible with VISTA-20P control panels
- Optional DIP switch poll mode available for retrofits

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

- Supplied by the control panel's two-wire V-Plex bus: 33.6mA at 8-11VDC (0.6mA when powered externally)
- External power supply option: 33.6mA at 12VDC (all loops shorted)

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Included items:

Eight 10K end-of-line resistors

Listings:

- UL/cUL/ULC Listed to UL1610, UL1635, UL636, UL464, UL609, UL365, UL1076, UL1637, UL1641, UL864, UL985, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-C1023, CSA-C22.2 No.205, CAN/ULC-S545
- ETL Listed to UL864
- FM
- CSFM Certificate Number: 7300-1645:131

4101SN

Description:

Relay output and zone input module

Product advantages:

- V-Plex technology allows you to locate output relays anywhere along the bus
- The 4101SN is an I/O module with a zone input and a relay output

Recommended use:

Use to switch remote devices like sirens, horns, LEDs or distant systems

Included items:

- Mounting screws
- 10K resistor

Mounting options:

Screw-mounted to a flat surface

General application:

Output switching

Compatibility:

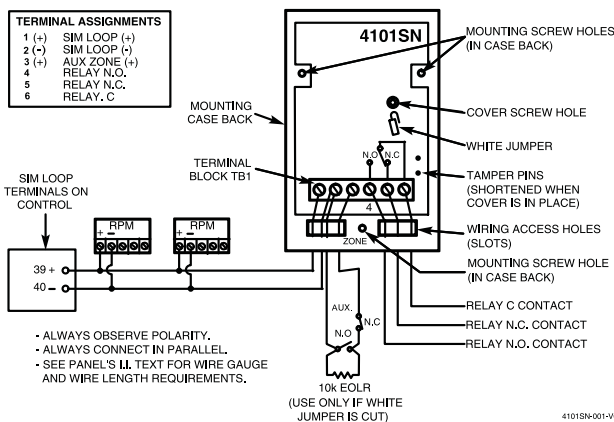

V-Plex

Product dimensions:

3.25" H x 2.125" W x 1" D

Listings:

- UL Listed to UL864, UL985, UL1610, UL609, UL365, UL1023
- ETL Listed to UL864
- MEA
- CSFM Certificate Number: 7300-1645:147

4297

Description:

- V-Plex polling loop extender and booster module
- As an isolation module, the 4297 allows installers to group selected zones on one loop. For example, fire and burglary zones may be grouped separately; essentially isolating one from another. This isolation feature prevents failure in one loop from compromising the integrity of any other loop.
- Gives installers the flexibility to add additional devices and extend the wiring length of the polling loop

Product advantages:

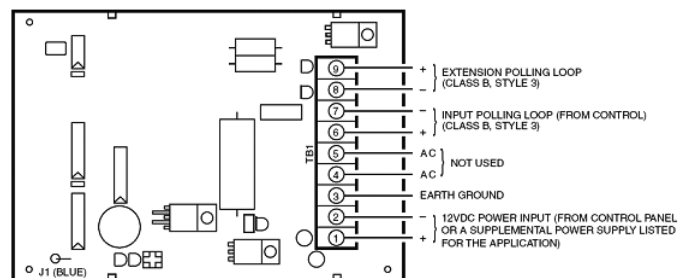

- Isolate open and short circuit faults from main V-Plex loop
- Provides additional V-Plex loop current and distance
- V-Plex loop isolation between primary and extended loop
- Fully supervised
- Separate DC input, no current drain from primary V-Plex loop
- Monitors DC power input

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Listings:

- UL/cUL/ULC Listed to UL1610, UL1635, UL636, UL864, UL985, CAN/ULC-S304, CSA-C22.2 No.205, CAN/ULC-S545
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645:122

V-Plex-VSI

Description:

- V-Plex short isolator
- Designed to work on all Honeywell V-Plex polling loops, the V-Plex-VSI provides short circuit isolation for devices on compatible control panels
- When a short occurs on a polling loop branch, it illuminates a trouble LED and isolates the defective branch from the system – enhancing life safety and protection while reducing troubleshooting time and maintenance costs

Product advantages:

- Detects and isolates polling loop branches with complete or resistive shorts, and overload or defective polling loop devices on initial power up
- Can be used to isolate burglary devices from fire devices, increasing life safety and protection
- LED indicator reduces troubleshooting time and maintenance costs
- Can be used on all qualified controls that support the ADEMCO V-Plex two-wire polling loop
- Operates automatically on qualified controls without the need for changes to existing control hardware or software
- Powered directly from the V-Plex two-wire polling loop
- Can be placed on any major or minor branch in any configuration on the polling loop
- Low power consumption
- Designed to meet appropriate regulatory agency requirements

Product dimensions:

4.135" L x 2.56" W x 0.87" D

Listings:

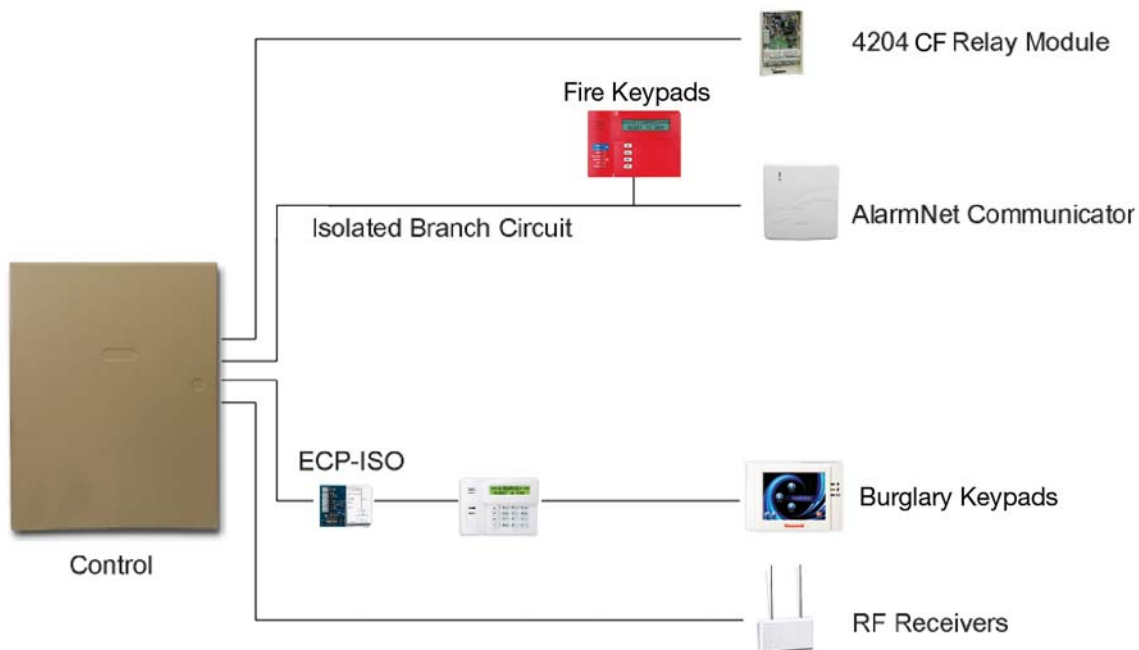

- UL/cUL/ULC Listed to UL1610, UL1635, UL464, UL609, UL365, UL1641, UL864, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-C1023
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645:166

Expanding the System with the ECP Bus

Honeywell VISTA-32FB, VISTA-128 and VISTA-250 series intrusion control panels provide a number of ways to control and expand the system. The ECP (Enhanced Communication Protocol) bus provides connections for system keypads, communication devices, relay output devices and modules that support many other system options. You can include up to 31 total devices on the ECP bus, so there are plenty of addresses to support system options.

VISTA-32FB, VISTA-128 or VISTA-250 ECP Cabling Example

2000 feet maximum: The length of all wire runs combined, regardless of the wire gauge, must not exceed 2000 feet when using an unshielded four-wire cable (1000 feet if using shielded cable or if the run is in metallic conduit).

Isolating Branch Circuits

In systems that employ both commercial fire and burglary protection, the burglary and fire circuits must be isolated on the bus. This is accomplished through use of an ECP-ISO module (see page 234). Connect all fire devices on the ECP bus directly to the control panel and all burglary devices through the ECP-ISO.

The ECP-ISO is compatible with the VISTA-32FB, VISTA-128FBP and VISTA-250FBP (and equivalent models).

Keypad Bus Connections

You can connect one or more keypads to a single cable run. Determine wire gauge by referring to the table below.

Wire Gauge	Distance
22 gauge	450 feet
20 gauge	700 feet
18 gauge	1100 feet
16 gauge	1750 feet

Keypad Wire Run Length/Gauge Table

The maximum wire run length from the control to a keypad, which is home run back to the control, must not exceed the lengths listed in the table. If more than one keypad is wired to one run, then the above maximum lengths must be divided by the number of keypads on the run (for example, the maximum length is 225 feet if two keypads are wired on a 22 gauge cable run).

5881 and 5883 RF Receivers

Honeywell recommends that you home run these receivers directly to the panel. Use a maximum of 220 feet of 22 gauge (0.64mm) cable or 550 feet of 18 gauge (1mm) cable for each run.

No more than two receivers can be assigned in programming or installed onto the system.

4204 and 4204CF Relay Modules

Honeywell recommends that you home run each module directly to the panel. The table below shows the maximum wire run lengths.

Wire Gauge	Distance
22 gauge	125 feet
20 gauge	200 feet
18 gauge	300 feet
16 gauge	500 feet

4204 Wire Gauge Maximum Length Table

Other devices such as AlarmNet Communicators, FSA or 4286 have no documented wire limits.

We suggest following keypad wire limits for these devices and home run these whenever possible.

4204

Description:

Addressable four-relay output board for Honeywell ECP bus compatible systems

Product advantages:

- Home run to ECP bus on control
- Provides up to four Form C dry-contact outputs
- Simple DIP switch addressing
- Enclosure included for easy mounting and tamper protection
- Supervised for proper module operation
- UL Listed for commercial burglary applications

Recommended use:

Use for commercial systems when deploying relay outputs to switch external devices

Mounting recommendations:

- On a flat surface
- Locate anywhere on the ECP bus

Compatibility:

All VISTA control panels that are compatible with ECP bus technology such as VISTA-20P, VISTA-21IP, VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

- Supplied by the control panel's four-wire ECP bus: 15mA at 12VDC idle, 40mA each energized relay (175mA maximum)
- External power supply option: 175mA at 12VDC (minimum)

Relay contact rating:

2A at 28VAC

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Listings:

- UL/cUL Listed to UL1641, UL/ORD-C1023
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645-0117

See control panel for wiring distance limitations.

Transmitter location is important for an effective wireless system

System designers need the ability to reach distant detection devices using various connection strategies. One effective means of connecting devices to the control panel is to use wireless transmitters. Wireless technology operates effectively in a number of construction types. When using wireless devices, here are a few points to remember.

Wireless Detector Range

Wireless system strength varies depending upon the building layout and construction types. To successfully design a wireless system, it helps to understand a little about how wireless devices transmit through material.

■ Range in Semi-enclosed Building Applications

In common business locations with permanent offices, cubicles and normal walls, the range between a transmitter and a receiver is a nominal 200 feet. This range can be extended by locating repeaters up to 200 feet away from receivers. This extends the range to 400 feet.

■ Range in Large, Open Applications

In warehouses, across yards or in other open environments, the range between transmitters and receivers can be far greater than 200 feet.

Glass and Plastic Building Materials

Radio waves pass through most glass and plastic materials. Transmitters or receivers located in glass or plastic enclosures should transmit through the enclosure with little effect on the strength of the signal.

Metal Building Materials

Just like a mirror reflects light, metallic materials reflect radio waves in the same way. When metal objects are near transmitters, radio waves must bounce off of metallic objects until the radio wave finds its way to a receiver. If metal objects surround transmitters, the wave may be blocked from being transmitted and messages would not be received by the system receiver.

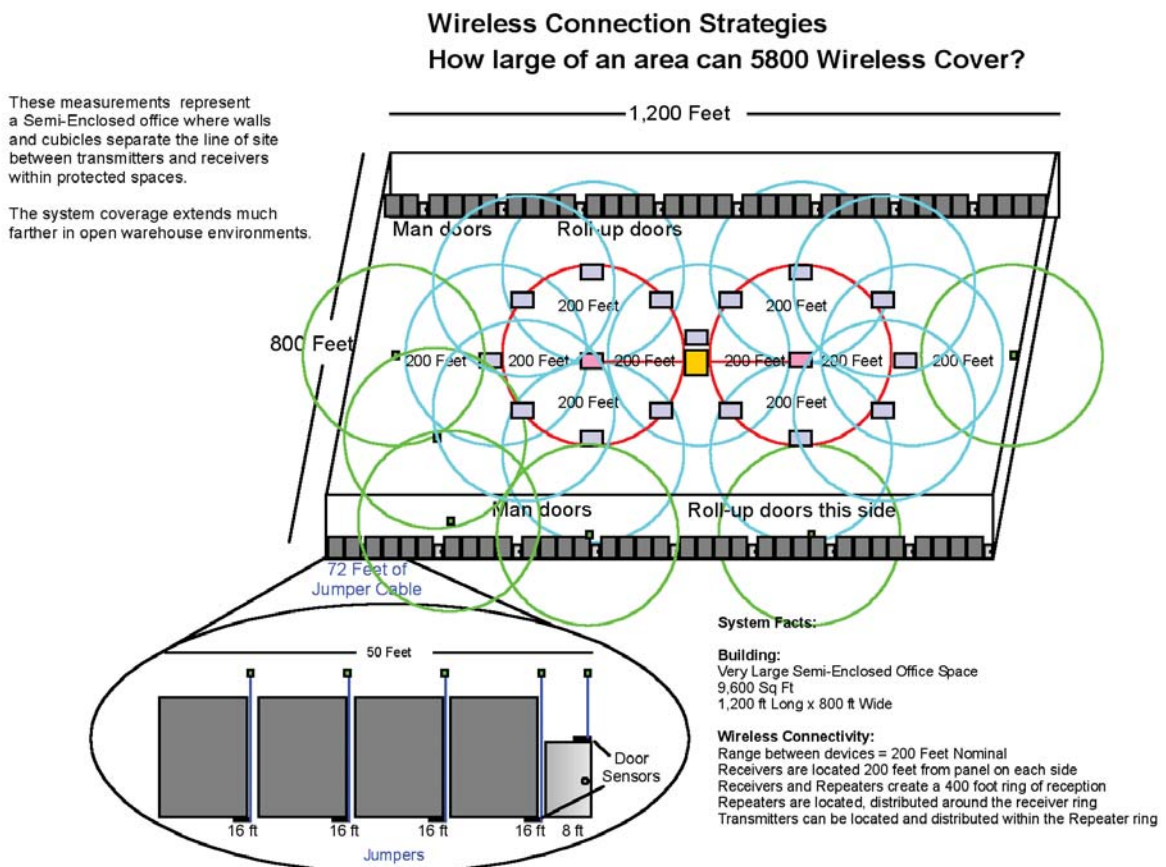

Wood and Earthen Building Materials

Concrete, wood, stucco and similar building materials tend to absorb radio waves. When these types of materials are between transmitters and receivers, the material tends to cause the transmitted power to be lower in strength when received. Surrounding a receiver with these types of materials can reduce overall system performance.

The Vastness of the Wireless System

As you will see, wireless systems can operate in buildings sized from the small retail store to the large warehouse. You can depend upon wireless devices making connections from reasonable distances, allowing you to protect very large buildings. With proper use of wireless repeaters, you can connect devices at extended locations up to 400 feet from receivers. In larger buildings, we recommend that you locate repeaters in the 400 foot ring that surrounds each of up to two receivers. Transmitters can then be located anywhere within 200 feet of any repeater or receiver, maximizing the distance in very large semi-enclosed office buildings.

To get a realistic understanding of a large wireless application, see the illustration below.

Making a Two-Way System

The system offers an option to provide status of the armed state and alarms on wireless keychain devices that are within system range. As another option, the system can provide wireless sirens using the 5800WAVE siren (see page 212). To achieve this, replace one receiver with a 5883H transceiver (see page 66). A transceiver receives signals from wireless sensors and can transmit system status to wireless control and status devices up to 50 feet from the transceiver. You can extend this distance an additional 50 feet by providing a 5800RP repeater (see page 66).

5881ENH

Description:

- Wireless receiver for 5800 Series Wireless devices
- Listed for commercial fire applications

Product advantages:

- Simple, four-wire ECP bus installation
- On-board LED status indicators
- Can be located up to 500 feet from control panel when connected to a four-wire, 18AWG, unshielded cable*
- Anti-jam technology
- Spatial Diversity System virtually eliminates nulls in the coverage area

Recommended use:

Use for commercial locations employing 5800 Series Wireless devices and transmitters

Mounting recommendations:

- On walls, locate high on walls away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of transmitters and wireless detectors

Compatibility:

All VISTA control panels that are compatible with 5800 wireless devices

Product dimensions:

10.875" H x 4.375" W x 1.438" D (antenna installed)

Range:

- Semi-enclosed buildings: 200 feet average
- Open warehouses: much greater than 200 feet

Power:

- 12VDC
- Maximum: 60 mA

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Listings:

- UL/cUL Listed to UL985, ULC-C1023
- CSFM Certificate Number: 7300-1645-128
- FCC
- IC

5800RP

Description:

Wireless repeater for 5800 Series Wireless devices

Product advantages:

- Extends range of wireless systems an additional 400 feet in semi-enclosed buildings, greater distances in open warehouses
- On-board LED status indicators
- Receives messages from transmitters and retransmits system status information to receivers or transceivers and to handheld devices and wireless sirens
- Can be located up to 200 feet from any system wireless receiver where 110VAC receptacle is available
- Anti-jam technology
- Spatial diversity system virtually eliminates nulls in the coverage area

Recommended use:

Use for larger commercial locations employing 5800 Series Wireless devices and transmitters where the system includes two-way handheld devices or wireless sirens

Mounting recommendations:

- On walls, locate high on wall away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of transmitters and wireless detectors

Compatibility:

All VISTA control panels that are compatible with 5800 Series Wireless devices

5816

Description:

Two-zone wireless transmitter for 5800 Series Wireless systems

Product advantages:

- Can be located up to 200 feet from receivers, transceivers or repeaters
- Tampered cover
- Includes integrated door contact
- Continual battery and tamper supervision
- Regular supervision check-in signals
- Seven-day low battery advanced warning before failure
- Normally closed contacts only

Recommended use:

Use for commercial locations employing 5800 Series Wireless receivers and transceivers

Mounting recommendations:

- **On walls:** Locate high on walls away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of receivers and transceivers

Compatibility:

All VISTA control panels that are compatible with 5800 Series Wireless devices

Product dimensions:

3.062" H x 1.562" W x 1.188" D

Range:

- Semi-enclosed buildings: 200 feet average
- Open warehouses: much greater than 200 feet

Power:

3V lithium battery included

Temperature:

32° F to 120° F (0° C to 48.9° C)

5817

Description:

- Three-zone wireless transmitter for 5800 Series Wireless devices
- Normally open contact option

Product advantages:

- Can be located up to 200 feet from receivers, transceivers or repeaters
- Three zone inputs in one transmitter
- Tampered front
- Continual battery and tamper supervision
- Regular supervision check-in signals
- Seven-day low battery advanced warning before failure
- Anti-jam technology
- Option for repetitive alarm transmission
- Normally open contact option

Recommended use:

Use for commercial locations employing 5800 Series Wireless receivers and transceivers

Mounting recommendations:

- On walls, locate high on wall away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of receivers and transceivers

Compatibility:

All VISTA control panels that are compatible with 5800 Series Wireless devices

Product dimensions:

3.5" H x 1.562" W x 1.188" D

Range:

- Semi-enclosed buildings: 200 feet average
- Open warehouses: much greater than 200 feet

Power:

3V lithium battery included

Temperature:

32° F to 120° F (0° C to 48.9° C)

User Interfaces

User interfaces allow system users to manage and control the system. Honeywell Security offers a wide variety of solutions to address the unique needs of every system user.

Honeywell offers everything from standard keypads to a line of exclusive touchscreen and dependable remote control devices. We can put the power of the system in your customers' hands when used with a smartphone or a PC. At a minimum, users need one touchscreen or keypad device. On-site history reporting may also be required in some applications. Keypads provide this vital system function. This section summarizes the benefits and requirements of our commercial user interface products.

Arm and disarm departments within the facility from a central location using simple and interactive menu screens.

Monitor computer and server rooms to help prevent costly server failures. Monitor server rooms to verify that the temperature, humidity, power and network presence are all within tolerance.

Monitor temperature-dependent facilities for failures and threshold changes like refrigeration and incubation.

Monitor all of your facilities' alert systems from one place. The system can allow you to centralize all of your building alert systems into a simple, easy-to-understand, easy-to-control user interface.

Control the operation of door locks and door holders around the facility. Locate the interface at the security desk or in management offices to provide a central control station for the building.

See operating status of distant appliances like motors, generators or pumps. See history of events gathered by the system over time.

Fire alarm status and reset capabilities allow users and responding agencies to quickly take charge of the system and see current status of the fire alarm when needed.

6272CV Family High Resolution Color Graphic Touchscreen Keypads

Honeywell's 6272 TouchCenter series of graphic keypads with their digital picture frames and brilliant, high resolution, intuitive touchscreen displays are an unbeatable combination – providing you with a unique product designed to help you differentiate your offering, close more sales and increase customer retention.

The stunning, high resolution TFT display showcases your customer's photos in vivid, eye-popping detail and can be easily managed and changed by an end-user. It can be used by business owners as a communications tool by letting customers know about special promotions or sales, showcasing new product introductions, giving employees information or displaying floor plans.

The keypad actually talks, announcing the type and location of alarm during an emergency, giving your customers more time to take appropriate action when seconds count. It also has a built-in message center that allows employees to record and playback messages left for each other.

Just picture what the 6272 can do for your business!

Compatible controls with maximum number of graphic keypads supported per system:

- VISTA-20P (4)
- VISTA-128FBP (3)
- VISTA-21iP (4)
- VISTA-250BP (3)
- VISTA-128BP (3)
- VISTA-250FBP (3)

Business owners and facility managers can use the TouchCenter as a communication tool with the simple insertion of an SD card.

6272CSV

6272CBV

6272CV

6272 Color TouchCenter Family

Description:

- High-resolution 640 x 480 TFT display
- 64,000 colors capability to display vivid images
- Digital picture frame or slideshow through standard SD card
- Available in three colors
 - Silver: Ideal for restaurant kitchens with stainless steel appliances, garages and industrial settings
 - Black: Looks great in conference rooms, next to flat screen presentation displays and more
 - White: Blends seamlessly with most lighter décors including common lobbies
- Voice annunciation of type and location of alarm*
- Message center that lets end-users record and playback messages
- Intuitive touchscreen display with icons and menu driven prompts
- Entry/Exit countdown displayed
- Authorized end-user can add or delete user codes

Product advantages:

- High-resolution TFT display that doubles as a digital picture frame
- Adds value by allowing businesses to display special promotions, sales or floor plans, give employees specific information about day to day activities and increase their brand exposure by showcasing their company logo or business
- Six language options: English, Spanish (Latin American), Spanish (European), French Canadian, Italian and Portuguese

Compatibility:

Any Honeywell VISTA control panels that support the advanced user interface, such as VISTA-20P, VISTA-21iP, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP

Product dimensions:

7.25" W x 5" H x 1.375" D

Power:

- Standby – 180mA
- Activated – 305mA

Temperature:

- Operating: 50° F to 131° F (10° C to 55° C)
- Storage: -40° F to 158° F (-40° C to 70° C)

Included Items:

User Guide

Options available:

- 6272CSV: Silver Color Graphic Touchscreen Keypad with Voice
- 6272CBV: Black Color Graphic Touchscreen Keypad with Voice

6270 Graphic Touchscreen Keypad

The 6270 TouchCenter keypad has graphics and menu-driven prompts that guide the end-user through every step, making system operation easier than ever. This simplicity will help reduce costs associated with end-user initiated false alarms and training.

The zone list is easily viewable, helping to reduce false alarms. The event log displays the most recent activity on the security system to help track employees. Authorized end-users have the ability to add and delete user codes, eliminating the need for a service call.

Compatible controls with maximum number of graphic keypads supported per system:

- VISTA-20P (4)
- VISTA-21iP (4)
- VISTA-128BP (3)
- VISTA-128FBP (3)
- VISTA-250BP (3)
- VISTA-250FBP (3)

Black and White Graphic Touchscreen

Product advantages:

- Unique touchscreen capability for a more modern user interface
- Easy to read day and night
- Easier operation, presents logical functions
- Crisp, clear sounder for a more intuitive operation
- Available in popular off-white trim

Mounting options:

- Designed to be located within the protected area
- Mount directly to appropriate mounting surface with screws. Align at the height of existing light switches.

Compatibility:

All Honeywell VISTA control panels that support the advanced user interface, such as VISTA-20P, VISTA-21iP, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP

Operating temperature:

50° F to 131° F (10° C to 55° C)

Product dimensions:

6.25" H x 5" W x 1" D

Power:

- Alarm: 280mA @ 12VDC
- Standby: 180mA @ 12VDC

Included items:

User Guide

6460W 6460S

Premium custom Alpha Display keypad with modern look

Product advantages:

- Unique look with premium styling that matches well with contemporary colors and textures
- Easier to read negative LCD display
- Easier to see at night – better clarity display

Mounting options:

- Designed to be located within the protected area
- Mount directly to appropriate mounting surface with screws. Align at the height of existing light switches.

Compatibility:

Any Honeywell VISTA control panel

Operating temperature:

32° F to 122° F (0° C to 50° C)

Product dimensions:

5.562" H x 6.75" W x 1" D

Power:

- Alarm: 150mA @ 12VDC
- Standby: 40mA @ 12VDC

Included items:

User Guide

Options:

- 6460W: White trim, gray interior
- 6460S: Silver trim, black interior

Listings:

6160PX

Alpha Display keypad with Integrated Proximity Reader

Description:

- Large 32-character alpha display provides system status and zone information in plain English
- Integrated proximity reader for easy system operation
- Keys continuously backlit for greater visibility
- Speaker with audible beeps to indicate: system status, entry/exit delay and other alarm situations
- Four programmable function keys

Product advantages:

- Arm (armed away) and disarm system with a simple swipe
- Helps alleviate the need to remember codes
- Small enough to easily fit on a keychain

Mounting options:

- Designed to be located within the protected area
- Mount directly to appropriate mounting surface with screws. Align at the height of existing light switches.

Compatibility:

Any Honeywell VISTA control panel

Operating temperature:

32° F to 122° F (0° C to 50° C)

Product dimensions:

5.312" H x 7.375" W x 1.188" D

Power:

- Alarm: 150mA @ 12VDC
- Standby: 40mA @ 12VDC

Included items:

- Two prox tags (additional tags can be sold separately)
- User Guide
- Keypad cover door

Options:

- PROXTG-BK Black Prox Tag
- PROXTG-GY Gray Prox Tag

Listings:

- ETL/cETL Listed to UL365, UL609, UL864, UL985, UL1610, UL1023, SIA, CAN/ULC-S559, CAN/ULC-S545, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-C1023

USER INTERFACES FOR SYSTEM CONTROL

6160

Classic-style custom Alpha Display keypad

Description:

- Large 32-character alpha display provides system status and zone information in plain English
- Keys continuously backlit for greater visibility
- Speaker with audible beeps to indicate: system status, entry/exit delay and other alarm situations
- Four programmable function keys

Product advantages:

- Classic style for easy replacement
- Crisp, clear, easy-to-read 32-character LCD Display
- Door to cover keys offers additional discretion

Mounting options:

- Designed to be located within the protected area
- Mount directly to appropriate mounting surface with screws. Align at the height of existing light switches.

Compatibility:

Any Honeywell VISTA control panel

Operating temperature:

32° F to 122° F (0° C to 50° C)

Product dimensions:

5.312" H x 7.375" W x 1.188" D

Power:

- Alarm: 150mA @ 12VDC
- Standby: 40mA @ 12VDC

Included items:

- User Guide
- Keypad cover door

Option:

6164US: White with four zone inputs (compatible with VISTA-20P and VISTA-21iP control panels)

Listings:

- UL/cUL Listed to UL1610, UL1635, SIA CP-01-2000, UL464, UL609, UL365, UL1641, UL985, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-C1023, CAN/ULC-S545

6165EX

Shown with and without door.

Slim-line portrait-style custom Alpha Display keypad

Description:

- Custom alpha, 32-character display
- Slimline, portrait design
- Compact size
- Four fully programmable function keys
- Single button operation
- Tamper for supervision

Product advantages:

- Slim-line style that matches well with existing fixtures
- Crisp, clear, easy-to-read 32-character LCD Display
- Door to cover keys offers additional discretion

Mounting options:

- Designed to be located within the protected area
- Mount directly to appropriate mounting surface with screws. Align at the height of existing light switches.

Compatibility:

Any Honeywell VISTA control panel

Operating temperature:

32° F to 122° F (0° C to 50° C)

Product dimensions:

4.875" H x 2.875" W x 1.25" D

Power:

- Alarm: 150mA @ 12VDC
- Standby: 40mA @ 12VDC

Included items:

- User Guide
- Keypad cover door

Listings:

WIRELESS REMOTE CONTROL ARMING DEVICES

5834-4

Four-Button Wireless Key

- Four buttons with eight programmable functions
- Tactile keys and LED indication that the transmission was sent
- Icons for simple, easy-to-understand functions
- Supports both Standard and High-Security encrypted modes
- User replaceable, long-life lithium batteries
- Dimensions: 2.5" x 1.25" x 0.5"
- Compatible with Honeywell's 5800 Series wireless products

Coming Soon!

5834-4EN

Four-Button Wireless Key with Plated Bezel and Key Ring

- Plated bezel and key ring
- Additional key ring color options (purchase separately)
- Four buttons with eight programmable functions
- Tactile keys and LED indication that the transmission was sent
- Icons for simple, easy-to-understand functions
- Supports both Standard and High-Security encrypted modes
- User replaceable, long-life lithium batteries
- Dimensions: 2.5" x 1.25" x 0.5"
- Compatible with Honeywell's 5800 Series wireless products

5834-2

Coming Soon!

Two-Button Wireless Key

- Two buttons with three programmable functions
- Tactile keys and LED indication that the transmission was sent
- Icons for simple, easy-to-understand functions
- Supports both Standard and High-Security encrypted modes
- User replaceable, long-life lithium batteries
- Dimensions: 2.5" x 1.25" x 0.5"
- Compatible with Honeywell's 5800 Series wireless products

5878

Wireless Remote Keypad

- Eight programmable functions
- Includes user-replaceable, long-life lithium batteries
- Two-panic button
- Compatible with 5800 receivers

USER INTERFACES FOR SYSTEM CONTROL

6220S

6220S **Serial Printer**

6220P **Parallel Printer**

6220RPR **Ribbon Paper Refill Pack**
(two ribbons/four rolls of paper)

4100SM **Serial Interface Module**
(for VISTA-32, VISTA-128 and VISTA-250
Series panels)

On-site printing has never been more practical than with Honeywell's 6220 Series of security system printers. A perfect complement to your fire, burglary or access control systems, these feature-rich printers are compact, simple to operate and cost-effective.

The quick-install 6220 Series contains small footprints for easy placement on any surface. A wall mount bracket is supplied for convenient mounting.

- Burglary, fire and access control
- Portable for keeping service/inspection records
- Event logging
- Permanent audit trail/records
- System test and inspection
- Service and diagnostics
- Sales demos
- Works with any product with an R232 or parallel port
- Medical
- Refrigeration
- Inventory control
- QA test results
- Automotive diagnostic results
- Hard copy credit card verification
- Remote message printer select
- Compatible with VISTA-32FB, VISTA-128 and VISTA-250 Series panels when using 4100SM Serial Interface Module

Sensors

Honeywell provides a sensor line that's unsurpassed for quality, design and performance. Our field-proven, installation-friendly products, including PIRs, DUAL TECs® and FlexGuard® glassbreak detectors, support the broadest range of end-user applications while minimizing installation and maintenance costs.

Sensing the Position of Doors, Windows and Hatches

- **The door or window position sensor is a frame-mounted sensor that detects the open or closed position of a door.** When the door is open, the sensor sends status data to the control panel indicating the open position. Likewise, when the door is closed, the sensor sends data to the control panel indicating the closed position.
- **The door or window sensor can be used in intrusion detection, access control, remote control, annunciation systems and in energy management applications.** Connecting the door contact through the system allows for all of these applications to be addressed using a single contact for each door, as opposed to multiple contacts at a single door being connected to multiple systems.
- **Users see status and alarms from the sensor at the local keypad.** The control panel can also send a message to the monitoring station.
- **When selecting the right sensor for your door, consider your selection from a variety of sensor styles that are designed to most closely fit your application.** Also, if you are cabling, consider whether you will conceal cabling, or route cabling exposed within the protected area. If the cable is exposed, will it be protected inside of conduit? If using conduit, you will likely use armored sensors if you must expose cabling between the conduit box and the sensor.
- **Living in the lightning belt:** High voltage from lightning strikes can have a negative effect on typical sensors. In some cases, contacts within normal sensors can weld shut, rendering them useless for detecting the opening of the door or window. Honeywell offers the exclusive XTP contacts that can withstand up to 2400-volt surges. Look for the XTP note in the product advantages section when selecting these contacts.
- **Special packaging available for more efficient inventory:** We offer packaging options such as our revolutionary “Ammo Box,” which comes in a box containing an easy-feed roll of individually-wrapped single sensor install kits. Ask your distributor about Ammo Kit packaging today.

Cable Methods

Installation Notes

Concealed in walls and ceiling areas

Concealed and recessed into the frame of the opening

Exposed

Exposed and mounted on the inside of the frame of the protected opening

Exposed in conduit

Exposed in vandal-resistant, armored housing mounted inside of the frame of the protected opening

Concealed between sensor and conduit box

Allows use of concealed sensors in door frames when door frame is hollow

Exposed between sensor and conduit

Use armored sensor leads to protect wiring in areas where vandal resistance is required

Selecting the Right Sensor for Your Application

Knowing a little about the construction of the door or window frame will help you to make proper decisions when selecting the right sensor for the job. Consider asking yourself the following questions and noting your observations on a job planning diagram as you survey the building.

1. What type of frame surrounds the door or window?

- Wood
- Hollow metal
- Filled metal

2. What installation method will I require?

- Concealed
- Exposed

3. If exposed or in conduit, should the sensor be vandal resistant?

- Exposed Armored = Vandal resistant
- Exposed = Standard

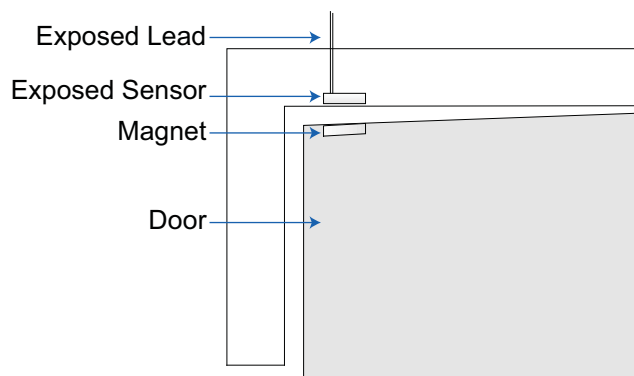

4. What method will I use for the application?

- Wireless
- Hardwired conventional
- Hardwired addressable

Concealed Applications for Wood or Hollow Metal Frames

Exposed Applications for Filled Metal, Hollow Metal and Wood Frames

4939SN

Description:

- For control panels supporting V-Plex devices only
- Surface mount
- Lead connection
- V-Plex polling loop connection – point I.D.

Recommended use/application:

- Install on filled metal door frames
- Compatible with all exposed door and window frame types

Product advantages:

- Epoxy sealed for protection against moisture and impact
- Factory installed 5' lead
- Built-in V-Plex technology reduces overall system cost

Mounting options:

Screw-mounted to a flat surface

Product dimensions:

0.53" H x 2.10" W x 0.50" D

Maximum gap:

1.25"

Compatibility:

V-Plex

Replaces:

Description:

- For control panels supporting V-Plex devices only
- Surface mount
- Lead connection
- V-Plex polling loop connection – point I.D.

Recommended use/application:

Install on wood frame doors and windows in exposed applications

Product advantages:

- Miniature size for smaller spaces
- Cover hides mounting screws and terminals
- Epoxy sealed for protection against moisture and impact
- Factory Installed 5' lead
- Built-in V-Plex technology reduces overall system cost

Mounting options:

Screw-mounted to the door or window frame

Product dimensions:

0.43" H x 1.95" W x 0.43" D

Maximum gap:

0.75"

Compatibility:

V-Plex

PAL-T

Description:

Magnetic contact with hinged case cover for use in exposed applications in public areas

Recommended use/application:

- Use on most door or window frames including solid metal, hollow metal and wood frames
- The unit's secured cover make it a great fit in a wide variety of public access applications such as in schools, offices, retail locations and government offices

Product advantages:

- Patented hinged case protects terminals from tampering
- Concealed screws eliminate the need for splicing or soldering
- Wide gap for compatibility with metal doors and window frames
- Optional screw or adhesive mount makes it easier to hold in place as the unit is mounted
- Six wire entry points for mounting versatility
- Cover conceals the EOL resistor

Mounting options:

- Mount on the inside of the door or window frame adjacent to the accompanying magnet
- Use adhesive tape or screws to adhere the contact to the frame and magnet to the door or window

Product dimensions:

0.48" H x 2.00" W x 0.43" D

Maximum gap:

1.125" wide gap

Included items:

- Mounting adhesive
- Mounting screws

Options available:

- PAL-T-WH: White
- PAL-T-BR: Brown
- PAL-T-GY: Grey
- PAL-WH: With 5' leads (5 pack)
- PAL-M-WH: Extra magnet (10 pack)
- PAL-M-BR: Extra magnet (10 pack)

Description:

- Door/window sensor
- Surface mount
- Terminal
- Form C/SPDT switch

Recommended use/application:

- Install on wood-frame doors and windows in exposed applications
- Single-throw, double-pole contact for high-security applications

Product advantages:

- Form C output for unique applications
- Cover hides terminal, mounting screws and EOL resistor

Mounting options:

Screw-mounted to the door or window frame

Product dimensions:

0.51" H x 2.55" W x 0.63" D

Maximum gap:

1.00"

Compatibility:

Conventional

Included items:

- Magnet

- For control panels supporting V-Plex devices only
- Recessed (3/8" diameter)
- Concealed mount
- Lead connection
- V-Plex polling loop connection – point I.D.

Recommended use/application:

Install on wood frame doors and windows in concealed applications

Product advantages:

- Factory installed 5' lead
- V-Plex technology reduces overall system cost

Mounting options:

Press-fit into hole in door or window frame

Product dimensions:

0.375" diameter x 0.77" D

Maximum gap:

0.625"

Compatibility:

V-Plex

Included items:

Magnet

Option available:

4944SN-WH: White

Listings:

UL/ULC Listed to UL634, CAN/ULC-C634

944T

Description:

- Door/window sensor
- Recessed (3/8" diameter)
- Concealed mount
- Form A/SPST switch

Recommended use/application:

Install on wood frame doors and windows in concealed applications

Product advantages:

Exclusive Staggered "T" terminals eliminate splice, solder and tape, and are compatible with standard size screwdrivers

Mounting options:

Press-fit into hole in door or window frame

Product dimensions:

0.375" diameter x 1.2" D

Maximum gap:

0.75"

Compatibility:

Conventional

Included items:

Magnet

Options available:

- 944T-WH: White
- 944T-BR: Brown
- 944T-WH-M: Extra magnet (10 White)
- 944T-BR-M: Extra magnet (10 Brown)

Listings:

944TRE

Description:

- Door/window sensor with button magnet
- Recessed (3/8" diameter)
- Concealed mount
- Form A/SPST switch

Recommended use/application:

Install on wood-frame doors and windows in concealed applications

Product advantages:

- Exclusive Staggered "T" terminals eliminate splice, solder and tape, and are compatible with standard size screwdrivers
- Rare Earth magnet for smaller window tracks

Mounting options:

Press-fit into hole in door or window frame

Product dimensions:

0.375" dia. x 0.12" D

Maximum gap:

0.5"

Compatibility:

Conventional

Included items:

Magnet

Options available:

- 944TRE-WH: White
- 944TRE-BR: Brown
- PROBTM: 10 pack of button magnets

Listings:

UL Listed to UL634

SENSORS | RECESSED AND CONCEALED CONTACTS

944TSP

Description:

- Door/window sensor
- Recessed
- Concealed mount
- Form A/SPST switch

Recommended use/application:

Install on hollow metal frame doors and windows in concealed applications

Product advantages:

- Exclusive Staggered "T" terminals eliminate splice, solder and tape, and are compatible with standard size screwdrivers
- .375" magnet for tighter installations

Mounting options:

Press-fit into hole in door or window frame

Product dimensions:

0.75" diameter. x 1.38" D

Maximum gap:

0.75"

Compatibility:

Conventional

Included items:

Magnet (.375")

Options available:

- 944TSP-WH: White
- 944TSP-BR: Brown
- 944WH-M: Extra magnets (10 White)
- 944BR-M: Extra magnets (10 Brown)

Listings:

UL/ULC Listed to UL634, CAN/ULC-C634

945

Description:

- Door/window sensor
- Surface mount
- Form A/SPST switch

Recommended use/application:

- Install on filled metal frame doors and windows in exposed applications
- Compatible for use with all door and window frame types

Product advantages:

- Adhesive mount magnetic contact for quick and simple installations
- Factory installed 15' lead

Mounting options:

Adhesive only

Product dimensions:

0.37" H x 1.54" W x 0.44" D

Maximum gap:

1.25"

Compatibility:

Conventional

Included items:

- Mounting adhesive pad
- Magnet

Options available:

- 945-WH: White
- 945-BR: Brown
- 945T-WH-M: Extra magnets (10 White)
- 945T-BR-M: Extra magnets (10 Brown)

Listings:

4959SN

Description:

- For control panels supporting V-Plex devices only
- Overhead door and gate sensor
- Floor mount
- Armored
- V-Plex polling loop connection – point I.D.

Recommended use/application:

Install on floor near overhead doors, hatches and other industrial grade, vandal-resistant applications

Product advantages:

- Rugged aluminum casing for industrial and vandal-resistant applications
- Epoxy sealed for protection against moisture and impact
- Factory installed 24" armored lead
- Built-in V-Plex technology reduces overall system cost

Mounting options:

Screw-mounted to the floor under overhead door

Product dimensions:

0.45" H x 4.25" W x 1.7" D

Maximum gap:

2.00"

Compatibility:

V-Plex

Included items:

Magnet

Listings:

UL/ULC Listed to UL634, CAN/ULC-C634

957

Description:

- Overhead door and gate sensor
- Floor or post mount
- Form A/SPST switch

Recommended use/application:

Mount on floor to protect warehouse overhead doors

Product advantages:

- Rugged cast aluminum housing for protecting magnet
- Designed to withstand more industrial environments
- 18" armored cable

Mounting options:

Screw-mounted to the floor under overhead door

Product dimensions:

0.45" H x 4.25" W x 1.7" D

Maximum gap:

1"

Sensing Motion in Rooms and Areas

Motion detectors can help you to determine if someone is moving in protected rooms or areas. The ceiling or wall-mounted devices detect movement within the protected area and analyze the motion to determine if an actual intrusion occurred. If the sensor detects motion when the system is armed, an alarm message is sent to the central monitoring station. While the system is disarmed, it monitors the motion throughout the day, but does not send alarm messages. It can, however, send messages if someone tampers with the detector.

Some applications require additional considerations: UL requires that motion detectors trip within four steps.

Roof access provides intruders with a concealed area to enter buildings. Motion detectors help you to determine if access occurs after hours, even when other detection devices are not activated by typical use. The control panel can also send a message to the monitoring station.

Sensing Motion in Rooms and Areas

PIR (Passive Infrared) Motion Technology

There are three major types of PIR (passive infrared) sensor visual patterns:

- Wall-mounted long-range curtain or barrier pattern
- Wall-mounted wide angle, volumetric
- Ceiling-mounted 360° wide angle, volumetric

Although the patterns appear as if they represent beams emitting from the detector, this is not true. The rays in the pattern actually represent the visual areas seen by the PIR sensor as directed by an optical mirror or lens. The PIR sensor is like an eye, not like a flash light.

The tiny PIR sensor can be made up of one or more elements that are precisely arranged and aimed so that the sensor can judge the size and speed of travel related to a moving object within its view pattern. This can help to minimize false activations from rodents or other small animals, yet trigger accurately when a person walks within its viewing pattern.

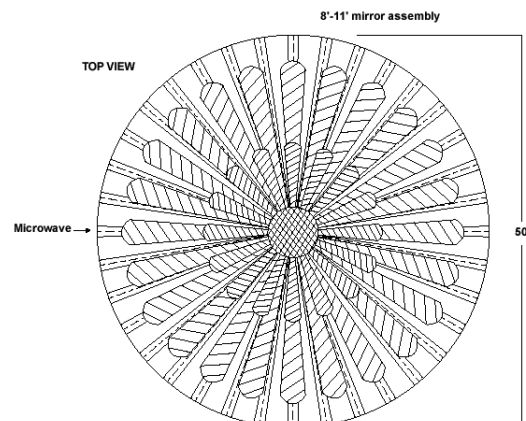

When the detector senses motion in the protected area, its relay output changes the state of a zone input on the system. The control panel responds to this change according to its program.

Wall-mounted long-range curtain or barrier pattern

Wall-mounted wide angle, volumetric

Ceiling-mounted 360° wide angle, volumetric

Microwave Motion Technology

Another sensor technology uses microwave technology to determine when an object moves in relation to a fixed background.

The sensor uses the Doppler effect to sense a change in the frequency of a low-power microwave signal. As an object moves toward the sensor, the reflected frequency increases. As an object moves away from the sensor, the reflected frequency decreases. By comparing these characteristics with the frequency being transmitted, the detector can accurately sense an object as it moves through the protected area.

When the detector senses motion in the protected area, its relay output changes the state of a zone input on the system. The control panel responds to this change according to its program.

Honeywell's precise K-Band technology:

This unique, innovative microwave technology allows our engineers to design a source in such a way as to provide a crisp pattern with no dead spaces. The pattern wave is so precise that it is less likely to activate when objects outside of the protected room move, such as in the case with store-front display windows or multi-tenant office complexes.

DUAL TEC® Motion Technology

In an attempt to validate the motion sensed by a single sensor, the DUAL TEC Motion Detector uses both PIR and Microwave technologies to determine if there is motion within a protected area.

The major advantage of using DUAL TEC technology is the built-in validation of motion within the protected area. Since both sensors must detect motion, but both sense very different ways, it is like getting an immediate "second opinion" before alarm activation. This helps to minimize false activations caused by environmental changes, small animals and other unexpected conditions.

In some cases, the unit can conserve power by allowing the PIR to remain active while allowing the microwave sensor to sleep. If the PIR senses motion, the microwave sensor activates and verifies the motion. If there is no motion sensed, the detector does not change the state of its alarm output.

When the detector senses motion from the PIR and microwave sensors in the protected area, its relay output changes the state of a zone input on the system. The control panel responds to these changes according to its program.

Selecting the Right Motion Detector for Your Application

Because selecting the right detector for the job is so important, we arranged this section to address the needs of various room or area sizes. To make it easier to select the best motion detector, see the following discussions within this section:

Motion Detectors for Smaller Rooms and Areas (see pages 101-111)

Motion Detectors for Medium-Sized Rooms and Areas (see pages 112-126)

Motion Detectors for Large-Sized Rooms and Areas (see pages 127-133)

Motion Detectors for Barrier-Style Protection Applications (see pages 134-147)

Honeywell offers an impressive variety of motion detectors that support a wide variety of protection strategies. Honeywell is an easy choice for the most trusted motion detectors – and now it is even easier for you to choose motion detectors for your application.

Motion Detectors for Small Rooms and Areas

When planning for smaller rooms, consider using motion detectors that provide smaller detection patterns for a better fit. You can also use multiple smaller-pattern motion detectors to cover selected spaces in larger rooms. Honeywell offers a wide variety of motion detectors with patterns suitable to protect rooms of all sizes. This group of motion detectors is suitable for rooms smaller than 40 ft. by 40 ft. (approximately 1600 sq. ft.).

1. How do you want to connect the motion detector to the system?
 - V-Plex Addressable
 - 5800 Series Wireless
 - Conventional zone inputs
2. Where do you want to locate the motion detector?
 - On the wall
 - On the ceiling (check ceiling height)
3. Will the detector be located in a room occupied by the general public, such as in lobbies, classrooms, libraries or in rooms of similar uses? Are you concerned about intentional sensor tampering or masking of its view?
 - Consider choosing a motion detector that includes tamper supervision for its cover and its base
 - Consider choosing a motion detector that features anti-mask supervision to avoid blockage of its view
4. Will the detector be located in an area that normally experiences wide changes in temperature, or is the location likely to experience very low temperatures at night?
 - Consider choosing a motion detector designed for low temperature environments
5. In each connectivity group, find the sensor technology:
 - PIR – for stable environments, these detectors work best in areas with no open windows and minimal air flow
 - DUAL TEC – for harsh environments such as drafty areas in front of windows, warehouse and storage environments or in multi-tenant facilities
6. Check the dimensions of the protected area against the pattern diagram to find the most suitable motion detector for your application.
7. If you choose a motion detector pattern that is smaller than the area you are protecting, you can improve system detection by using more than one to cover the area. This also allows the system to provide more accurate information about the location of the motion detected in the building.
8. Are animals present in the area to be protected (i.e. birds, cats, rodents, dogs)?
 - Consider detectors with animal immunity
9. Are there valuables in the area to be protected, a high security application, or an area where the sensors are expected to be tampered with in an attempt to defeat them?
 - Consider sensors with look down zones, protecting the area directly beneath the detector
 - Consider sensors with AntiMask technology, guarding against masking of the PIR visibility

DT7500SN

Smart Contact Technology: Senses when system is armed or disarmed. When armed it switches to high-security mode. When disarmed it activates standby mode to reduce activity on the V-Plex bus. Smart Contact Technology is available with VISTA-32FB, VISTA-128FBP, VISTA-128BPT, VISTA-250FBP and VISTA-250BPT control panels.

Remote Walk-test LED Enable: Eliminates the need for a ladder or the need to open the detector to activate the walk-test LED. Available with VISTA-128BPT and VISTA-250BPT control panels.

Description:

- Motion detector for VISTA V-Plex DUAL TEC technology
- Uses a combination of PIR passive infrared and the revolutionary K-Band microwave technology

Recommended use/application:

- A perfect fit for lobbies, meeting rooms, classrooms, storerooms and other small-sized areas
- A great fit for multi-tenant or multi-use buildings

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Simple, two-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- V-Plex compatible addressable for compatibility to a wide range of industry-leading control panels requiring fewer power supplies for larger systems
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing environments (i.e. fans, motors) throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

On walls, located at a height of 6' to 9' from the floor in corners or along the wall

Product dimensions:

4.93" H x 2.93" W x 1.68" D

Recommended pattern:

35' x 40' (small)

Compatibility:

All VISTA control panels equipped with V-Plex addressable technology:

VISTA-32FB	FA1600C
VISTA-128BP	FA1660C
VISTA-128FBP	FA1670C
VISTA-250BP	FA1700C
VISTA-250FBP	

Temperature:

-4° F to 131° F (-20° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- Provided by V-Plex Bus
- 3mA (LED disabled); 6mA (LED enabled); 6.5mA (during initialization)

Included items:

- 35' x 40' Lens (Animal Immune)
- 50' x 60' Lens – installed

Options available:

- DT7000-LRLK: Long Range lens kit (89' L x 18' W)
- DT7000-PALK: Pet Alley lens kit (35' L x 40' W)
- DT7000-HSLK: High Security lens kit (35' L x 40' W)
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Listings:

- ETL Listed to UL639, CAN/ULC-S306
- FCC
- IC

5898

**Description:**

Wireless PIR motion detector with remotely selectable animal immunity and temperature monitoring capabilities

Recommended use/application:

- Use in small-sized rooms or areas within a wide variety of indoor locations such as offices, kitchen area, store rooms and retail spaces
- Exclusive K-Band technology makes this a perfect fit for multi-tenant or multi-partitioned systems
- Excellent for rooms with wide temperature changes from -4° F to 122° F (-20° C to 50° C)

**Product advantages:**

- Easy install, easy testing, easy adjustment saves money with every installation
- Five-year battery life
- Selectable animal immunity adjustable for 0, 50 lb or 100 lb animals
- Fully-supervised wireless connection requires no cabling between the control panel and the detector
- Temperature alerts for high (above 95° F) and low (below 45° F) temperature conditions
- Remotely programmable animal immunity from downloading software – adaptable to new building uses such as food storage and others where rodents may suddenly appear
- K-Band microwave technology reduces false activations from occupied adjoining areas
- Reduced back lobe effect minimizes false activation from activity behind the wall where the unit is mounted
- Flash light activates timed walk test. No need for ladders. No need to touch the detector before or after testing – makes the test more reliable.
- Dual slope temperature compensation allows the detector to automatically adjust to background temperatures and offers a better comparison of the background and the moving object
- Front and back tamper make the unit suitable for location in public areas
- Sealed optics and patented black bug guard minimizes false alarms due to the presence of insects within the housing
- Look down optic zone senses a pattern just below the unit
- Digital fluorescent light interference filter overcomes interference caused by noisy fluorescent fixtures
- Automatically compensates for the presence of operating business machines such as fans in PCs, cash registers, projectors and other commonly-used business equipment

5898 (continued)

Mounting options:

- Mount at a height between 7 ft and 9 ft high on the wall, either flat on the wall surface or in a corner
- Mount on the wall using SMB10 swivel mounting bracket
- Mount on the ceiling using the SMB10C swivel mounting bracket

Product dimensions:

2.94" W x 4.92" H x 2.05" D

Recommended pattern:

35' x 40' (small)

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works with all Honeywell VISTA series systems equipped with 5800 Wireless receivers

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

Up to 95%, non-condensing

Power:

Lithium

Included items:

- 35' x 40' Lens
- 50' x 60' Lens
- Mounting screws
- Batteries

Options available:

- DT7000-LRLK: Long Range lens kit (Pattern 50' x 8')
- SMB10: Universal wall-mount bracket
- SMB10C: Universal ceiling-mount bracket

5800PIR

Description:

Wireless PIR motion detector with and without animal immunity* for use in smaller rooms

Recommended use/application:

- Small lobbies, offices, areas and storage rooms where small animals and rodents may be present (up to 80 lbs.)
- Use in public or private offices where cabling is a challenge
- Great for lobbies, storage rooms and smaller work spaces
- One unit covers a room size up to 35' x 40'
- Use multiple units for larger rooms

Product advantages:

- Wireless device requires no cable runs
- Automatic walk-test eliminates the need for a ladder to test
- Longer battery life – up to 10 years
- Cold-temperature alert when temperature falls below 45° F
- Remote programmable saves service calls
- Dual-temperature slope compensation for more reliable operation at hot temperatures
- Bug Guard minimizes alarms due to movement of small insects within the unit
- UV-protected lens for longer lens life and continued clarity of optics
- Flashlight walk test makes installation, service testing and future inspection easier by eliminating the need for a ladder or cover removal while testing the unit for detection coverage

Mounting options:

- 7' to 9' high on wall
- Mount directly to appropriate mounting surface using screws
- Mount onto optional mounting brackets for surface-mounting on walls, in corners or on ceiling

Product dimensions:

2.375" H x 3.375" W x 1.5" D

Recommended pattern:

Standard Lens – 35' long x 40' wide

*Animal immunity feature can be turned on or off

Operating range:

- 200' from receiver, repeater or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works well with any Honeywell VISTA wireless receiver such as the 5881ENHC

Temperature:

14° F to 122° F (-10° C to 50° C)

Humidity:

Up to 95% relative, non-condensing

Power:

Battery powered device – up to ten years battery life using one (Honeywell #466, Duracell DL 123A, Sanyo CR123A, Panasonic CR 123A)

Included items:

- Lens mask
- Mounting screws
- One CR123A battery

Options available:

- SMB10: Universal wall-mount bracket
- SMB10C: Universal ceiling-mount bracket
- SMB10T: Universal wall-mount bracket, tampered

Listings:

- ETL
- FCC
- IC

35' / 11m Wide Angle Animal Immune Lens / Lentille à grand angle insensible aux animaux / Lente gran angular con tolerancia a animales (P/N 5-532-719-01)

DT7435C

Description:

- DUAL TEC motion detector with K-Band technology
- Uses a combination of PIR passive infrared and K-Band microwave technology

Recommended use/application:

- Use in commercial buildings, offices, school classrooms and storage rooms
- Great for small to medium areas
- One unit covers 35' x 40' area
- Use multiple units for monitoring larger rooms and areas

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs off sensor element
- Digital dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures, and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On walls, located at a height of 7' 6" from the floor in corners or along the wall
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Product dimensions:

4.685" H x 2.795" W x 1.654" D

Recommended pattern:

- 35' W x 40' L: Wide angle, High Security
- 35' W x 40' L: Wide angle, Animal Immune

Compatibility:

- Form C dry contact
- Compatible with all controls and zone input modules providing compatibility with dry contact output activation upon status change

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

12V 30mA idle to 35mA maximum

Included items:

- 35' x 40' High Security lens – included
- 35' x 40' Pet Immune – installed

Options available:

- DT7435: DUAL TEC motion detector, form A output
- DT7000-LRLK: Long Range lens kit (Pattern 8' W x 35' L)
- DT7000-PALK: Pet Alley lens kit (Pattern 35' W x 40' L)
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

IS2535

Description:
PIR motion detector

Recommended use/application:

- Use in commercial buildings, offices, school classrooms and storage rooms
- Great for small to medium areas
- Wide angle use: One unit covers a space 35' long x up to 40' wide
- Use multiple units for monitoring larger rooms and areas

Product advantages:

- 45° terminal blocks
- DIP switch programming
- Spare EOL terminals
- Automatic Walk Test mode
- Four sensitivity settings
- 7' 6" to 9' mounting height
- Uniform sensitivity optics
- Patented mirror look down
- SIA PIR-01 false alarm compliant
- Dual slope temperature compensation
- Works with SMB10 family of swivel brackets
- Microprocessor controlled
- Totally silent tamper proof relay

Detection method:
Dual Element Passive Infrared

Detection pattern:
35' x 40' (11m x 12m)

Pet/animal immunity:

- Switch Selectable Animal Immunity
- 0, 40, or 80 lbs. (0, 18 or 36Kg)

Mounting height:
7' 6" to 9'

Product dimensions:
4.375" H x 2.25" W x 1.5" D

Power requirements:
8.5 – 15.4VDC

Current draw:

- IS2535/T = 17 mA nominal, 20 mA Max
- IS2535TC = 21 mA nominal, 25 mA Max

Alarm relay:

- IS2535/T = Form A (normally closed), 30 mA, 24VDC, 40 Ohms resistance max
- IS2535TC = Form C (normally open/closed), 30 mA, 24VDC, 40 Ohms resistance max

Tamper switch:

Front (IS2535T) and Cover/Back (IS2535TC) = Form A (normally closed), 30 mA, 24VDC

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Options available:

- IS2535: Range 35' x 40' (11m x 12m)
- IS2535T: Front case tamper
- IS2535TC: Form C relay/case and wall tamper
- IS2500-PALK Pet Alley lens kit
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

IS2500LT

Description:

PIR motion detector with lower temperature technology designed for indoor unheated environments

Recommended use/application:

- Provide interior protection coverage for small rooms and areas
- A perfect fit for low-temperature applications such as large closed garages, mechanic shops, wood shops, storage sheds, green houses, enclosed outdoor nursery areas and other shed-like environments

Product advantages:

- Effective in a wider variety of temperature ranges
- Small, large and barrier lenses included for a wide variety of applications
- Discrete, low profile – not a distraction from style and architecture
- Simple, four-wire installation
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

Directly on walls or on SMB10 mounting brackets (listed under options available) for walls and ceilings located at height of 7' 6" to 9' from the floor in corners or sides of the room or area

Product dimensions:

4.375" H x 2.25" W x 1.5" D

Recommended pattern:

35' x 40' Lens (small rooms)

Compatibility:

- All controls and zone input modules providing compatibility with dry contact output activation upon status change
- Form C/SPDT
- 12VDC power input required

Temperature:

-40° F to 131° F (-40° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- 8.5-15.4VDC
- Idle 21mA
- Alarm 25mA

Included items:

- 35' x 40' Lens (small rooms) – installed
- 60' x 85' Lens (large rooms) – installed
- 100' x 20' Lens (long-range, barrier, curtain)

Options available:

- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

997

Description:

PIR motion detector for public areas where ceiling-mounting is an advantage against tampering and is also less vulnerable to changing room configurations and plants blocking pattern

Recommended use/application:

A perfect fit for school classrooms and administration offices, retail areas, public libraries, payment centers and other locations where the general public is invited

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Ceiling-mount to minimize vandalism in public places
- Simple, four-wire installation – minimizes installation cost and complexity
- On-board LED status indicators
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On ceilings: located at a ceiling height of 8-12' from the floor in the center of an area up to 36' in diameter
- Use multiple detectors to monitor larger rooms and areas

Product dimensions:

1" H x 3.5" diameter

Recommended pattern:

Floor pattern is 360° circular pattern, up to 36' in diameter when detector is located at a height of 8-12' from the floor

Compatibility:

- Status output: dry contact. All controls and zone input modules providing compatibility with dry contact output activation upon status change.
- Power: 12VDC power input required

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

10-95% relative, non-condensing

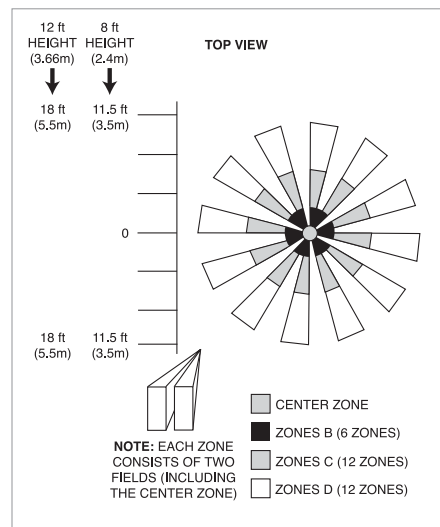

Power:

17mA @12VDC

Motion Detectors for Medium-Sized Rooms and Areas

Honeywell offers a wide variety of motion detectors with patterns suitable to protect rooms of all sizes. You can use any motions listed in “Motion Detectors for Smaller-Sized Rooms and Areas.” In addition, this group of motion detectors is suitable for rooms between 40 ft. by 40 ft. and 60 ft. by 60 ft. (between 1600 sq. ft. and 3600 sq. ft.).

1. How do you want to connect the motion detector to the system?

- V-Plex Addressable
- 5800 Wireless
- Conventional zone inputs

2. Where do you want to locate the motion detector?

- On the wall
- On the ceiling (check ceiling height)

3. Will the detector be located in a room occupied by the general public, such as in lobbies, classrooms, libraries or in rooms of similar uses? Are you concerned about intentional sensor tampering or masking of its view?

- Consider choosing a motion detector that includes tamper supervision for its cover and its base
- Consider choosing a motion detector that features anti-mask supervision to avoid blockage of its view

4. Will the detector be located in an area that normally experiences wide changes in temperature, or is the location likely to experience very low temperatures at night?

- Consider choosing a motion detector designed for low temperature environments

5. In each connectivity group, find the sensor technology:

- PIR – for stable environments, these detectors work best in areas with no open windows and minimal air flow
- DUAL TEC – for harsh environments such as drafty areas in front of windows, warehouse and storage environments or in multi-tenant facilities

6. Check the dimensions of the protected area against the pattern diagram to find the most suitable motion detector for your application.

7. If you choose a motion detector pattern that is smaller than the area you are protecting, you can improve system detection by using more than one to cover the area. This also allows the system to provide more accurate information about the location of the motion detected in the building.

8. Are animals present in the area to be protected (i.e. birds, cats, rodents, dogs)?

- Consider detectors with animal immunity

9. Are there valuables in the area to be protected, a high security application, or an area where the sensors are expected to be tampered with in an attempt to defeat them?

- Consider sensors with look down zones, protecting the area directly beneath the detector
- Consider sensors with AntiMask technology, guarding against masking of the PIR visibility

DT7500SN

Smart Contact Technology: Senses when system is armed or disarmed. When armed it switches to high-security mode. When disarmed it activates standby mode to reduce activity on the V-Plex bus. Smart Contact Technology is available with VISTA-32FB, VISTA-128FBP, VISTA-128BPT, VISTA-250FBP and VISTA-250BPT control panels.

Remote Walk-test LED Enable: Eliminates the need for a ladder or the need to open the detector to activate the walk-test LED. Available with VISTA-128BPT and VISTA-250BPT control panels.

Description:

- Motion detector for VISTA V-Plex with DUAL TEC technology
- Uses a combination of PIR passive infrared and the revolutionary K-Band microwave technology

Recommended use/application:

- A perfect fit for lobbies, meeting rooms, classrooms, warehouses and other medium-to-large sized rooms where sensing motion makes sense
- A great fit for multi-tenant or multi-use buildings

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Simple, two-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- V-Plex compatible/addressable for compatibility to a wide range of industry-leading control panels requiring fewer power supplies for larger systems
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing environments (i.e. fans, motors) throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

On walls, located at a height of 6' to 9' from the floor in corners or along the wall

Product dimensions:

4.93" H x 2.93" W x 1.68" D

5898

Description:

Wireless PIR motion detector with remotely selectable animal immunity and temperature monitoring capabilities

Recommended use/application:

- Use in medium-sized rooms or areas within a wide variety of locations such as offices, restaurants, warehouses and retail spaces
- Exclusive K-Band technology makes this a perfect fit for multi-tenant or multi-partitioned systems
- Excellent for rooms with wide temperature changes from -4° F to 122° F (-20° C to 50° C)

Product advantages:

- Easy install, easy testing, easy adjustment saves money with every installation
- Five-year battery life
- Selectable animal immunity adjustable for 0, 50 lb or 100 lb animals
- Fully-supervised wireless connection requires no cabling between the control panel and the detector
- Temperature alerts for high (above 95° F) and low (below 45° F) temperature conditions
- Remotely programmable animal immunity from downloading software – adaptable to new building uses such as food storage and others where rodents may suddenly appear
- K-Band microwave technology reduces false activations from occupied adjoining areas
- Reduced back lobe effect minimizes false activation from activity behind the wall where the unit is mounted
- Flash light activates timed walk test. No need for ladders. No need to touch the detector before or after testing – makes the test more reliable.
- Dual slope temperature compensation allows the detector to automatically adjust to background temperatures and offers a better comparison of the background and the moving object
- Front and back tamper make the unit suitable for location in public areas
- Sealed optics and patented black bug guard minimizes false alarms due to the presence of insects within the housing
- Look down optic zone senses a pattern just below the unit
- Digital fluorescent light interference filter overcomes interference caused by noisy fluorescent fixtures
- Automatically compensates for the presence of operating business machines such as fans in PCs, cash registers, projectors and other commonly-used business equipment

5898 (continued)

Mounting options:

- Mount at a height between 7 ft and 9 ft high on the wall, either flat on the wall surface or in a corner
- Mount on the wall using SMB10 swivel mounting bracket
- Mount on the ceiling using the SMB10C swivel mounting bracket

Product dimensions:

2.94" W x 4.92" H x 2.05" D

Recommended pattern:

50' x 60' (medium)

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works with all Honeywell VISTA series systems equipped with 5800 Wireless receivers

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

Up to 95%, non-condensing

DT7450C

Description:

- DUAL TEC motion detector with K-Band technology
- Uses a combination of PIR passive infrared and K-Band microwave technology

Recommended use/application:

- Use in commercial buildings, auditoriums, schools and industrial warehouse environments
- Great for small to medium hallways and inside large warehouse loading door areas
- Wide angle use: One unit covers a space 50' wide x up to 60' long
- Use multiple units for monitoring larger rooms and areas

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures, and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On walls: located at a height of 7' 6" from the floor in corners or along the wall or on SMB10 brackets (listed under options available) for walls and ceilings
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Product dimensions:

4.92" H x 2.94" W x 1.72" D

Recommended pattern:

50' L x 60' W (medium)

Compatibility:

- Form C dry contact (SPDT)
- Compatible with all controls and zone input modules providing compatibility with dry contact output activation upon status change

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

**Description:**

- Anti-Mask DUAL TEC motion detector with K-Band microwave technology
- Uses a combination of PIR passive infrared and K-Band microwave technology

Recommended use/application:

- Use in commercial buildings, auditoriums, schools and industrial warehouse environments
- Great for small to medium hallways and inside large warehouse loading door areas
- Wide angle use: One unit covers a space 50' wide x up to 60' long
- Covering larger areas: Use multiple units for monitoring larger rooms and areas
- Protected against masking or blocking coverage pattern

Product advantages:

- Detector generates a trouble condition when its view is blocked
- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR Pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures, and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On walls, located at a height of 7' 6" from the floor in corners or along the wall (or on SMB10 brackets listed under options available) for walls and ceilings
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Product dimensions:

4.92" H x 2.94" W x 1.72" D

Recommended pattern:

50' L x 60' W (medium)

Compatibility:

- Form C dry contact (SPDT)
- Compatible with all controls and zone input modules providing compatibility with dry contact output activation upon status change

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

12V 30mA idle to 40mA maximum

Included items:

50' x 60' Lens – installed

Options available:

- DT7000-LRLK: Long Range lens kit (Pattern 8' x 50')
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Listings:

- UL/cUL Listed to UL639, CAN/ULC-S306
- FCC
- IC

DT900

Description:

DUAL TEC motion detector with PIR, microwave and anti-masking technology

Recommended use/application:

- Use in gymnasiums, auditoriums and industrial warehouse environments
- Great for lobbies, locker rooms, lecture halls and work spaces
- One unit covers a room size up to 70' x 90' when mounted in a corner
- Use multiple units for larger rooms

Product advantages:

- Mask-alert technology guards against unit from being blocked
- DUAL TEC technology reduces false alarms
- Digital fluorescent light filter minimizes interference
- Adaptive baseline and bidirectional temperature compensation makes the unit perform better in harsher environments

Mounting options:

- 6' to 12' high
- Wall mounted on flat surface, single-gang electrical box, using a swivel mount bracket

Product dimensions:

6" H x 6.5" W x 8" D

Operating range:

- 50' x 40' (medium)
- 90' x 70' (large)

Compatibility:

- Works well with any hardwired zone input modules
- 12VDC power required

Power:

12V/50mA

Included items:

Mounting screws

Listings:

IS216T

Description:

Entry-level PIR motion detector with temperature compensation for small to medium-sized rooms

Recommended use/application:

- Use in lobbies, business offices, classrooms, restaurants, retail shops and similar areas
- Great for small to medium-sized rooms
- Wide angle use: One unit covers a space 40' wide x up to 40' long
- Covering larger areas: Use multiple units for monitoring larger rooms and areas

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Selectable pulse count
- Dual-slope temperature compensation
- Microprocessor controlled
- Patented look-down mirror
- Built-in tamper switch
- Simple, four-wire installation – minimizes installation cost and complexity
- On-board LED status indicators
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Intelligent Dual Element PIR technology evaluates size and speed of object in motion
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On walls, located at a height of 7' 6" to 9' from the floor
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Product dimensions:

3.375" H x 2.375" W x 1.5" D

Recommended pattern:

40' x 40' wide angle, volumetric

Compatibility:

- Status Output: dry contact. All controls and zone input modules providing compatibility with dry contact output activation upon status change.
- Power: 12VDC power input required

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

12VDC 16mA maximum

Options available:

- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

IS2500LT

Description:

PIR motion detector with lower temperature technology designed for indoor unheated environments

Recommended use/application:

- Provide interior protection coverage for medium rooms and areas
- A perfect fit for low-temperature applications such as large closed garages, mechanic shops, wood shops, storage sheds, green houses, enclosed outdoor nursery areas and other shed-like environments

Product advantages:

- Effective in a wider variety of temperature ranges
- Small, large and barrier lenses included for a wide variety of applications
- Discrete, low profile – not a distraction from style and architecture
- Simple, four-wire installation
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector’s view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

Directly on walls or on SMB10 mounting brackets (listed under options available) for walls and ceilings located at height of 7' 6" to 9' from the floor in corners or sides of the room or area

Product dimensions:

4.375" H x 2.25" W x 1.5" D

Recommended pattern:

60' x 85' (medium rooms)

Compatibility:

- All controls and zone input modules providing compatibility with dry contact output activation upon status change
- Form C/SPDT
- 12VDC power input required

Temperature:

-40° F to 131° F (-40° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- 8.5-15.4VDC
- Idle 21mA
- Alarm 25mA

Included items:

- 35' x 40' Lens (small rooms) – installed
- 60' x 85' Lens (large rooms)
- 100' x 20' Lens (long-range, barrier, curtain)

Options available:

- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered

Description:

Ceiling PIR for medium-sized rooms

Recommended use/application:

- Medium-sized rooms in offices, cafeterias, libraries or public activity centers
- Use in schools, commercial offices and environments
- Great for classrooms, lobbies, storage rooms and work spaces
- One unit covers a room size up to 50' x 50' when mounted on the ceiling
- Use multiple units for larger rooms

Product advantages:

Ceiling-mount PIR for large rooms

Mounting options:

- 8' to 12' high on ceiling
- Mount on electrical box or mount directly to appropriate mounting surface

Product dimensions:

4.9" diameter x 1.5" H

Operating range:

Circular pattern, 23' radius maximum

Compatibility:

- Works well with any wireless or hardwired zone input modules
- 12VDC power required

Temperature:

14° F to 122° F (-10° C to 50° C)

Humidity:

95% relative, non-condensing

Power:

12V 17mA

Included items:

Mounting screws

Motion Detectors for Larger Rooms and Areas

Honeywell offers a wide variety of motion detectors with patterns suitable to protect rooms of all sizes. This group of motion detectors is suitable for barrier applications and rooms larger than 60 ft. by 60 ft. (approximately 3600 sq. ft.).

1. How do you want to connect the motion detector to the system?
 - V-Plex Addressable
 - 5800 Series Wireless
 - Conventional zone inputs
2. Where do you want to locate the motion detector?
 - On the wall
 - On the ceiling (check ceiling height)
3. Will the detector be located in a room occupied by the general public, such as in lobbies, classrooms, libraries or in rooms of similar uses? Are you concerned about intentional sensor tampering or masking of its view?
 - Consider choosing a motion detector that includes tamper supervision for its cover and its base
 - Consider choosing a motion detector that features anti-mask supervision to avoid blockage of its view
4. Will the detector be located in an area that normally experiences wide changes in temperature, or is the location likely to experience very low temperatures at night?
 - Consider choosing a motion detector designed for low temperature environments
5. In each connectivity group, find the sensor technology:
 - PIR – for stable environments, these detectors work best in areas with no open windows and minimal air flow
 - DUAL TEC – for harsh environments such as drafty areas in front of windows, warehouse and storage environments or in multi-tenant facilities
6. Check the dimensions of the protected area against the pattern diagram to find the most suitable motion detector for your application.
7. If you choose a motion detector pattern that is smaller than the area you are protecting, you can improve system detection by using more than one to cover the area. This also allows the system to provide more accurate information about the location of the motion detected in the building.
8. Are animals present in the area to be protected (i.e. birds, cats, rodents, dogs)?
 - Consider detectors with animal immunity
9. Are there valuables in the area to be protected, a high security application, or an area where the sensors are expected to be tampered with in an attempt to defeat them?
 - Consider sensors with look down zones, protecting the area directly beneath the detector
 - Consider sensors with AntiMask technology, guarding against masking of the PIR visibility

DT7500SN

Smart Contact Technology: Senses when system is armed or disarmed. When armed it switches to high-security mode. When disarmed it activates standby mode to reduce activity on the V-Plex bus. Smart Contact Technology is available with VISTA-32FB, VISTA-128FBP, VISTA-128BPT, VISTA-250FBP and VISTA-250BPT control panels.

Remote Walk-test LED Enable: Eliminates the need for a ladder or the need to open the detector to activate the walk-test LED. Available with VISTA-128BPT and VISTA-250BPT control panels.

Description:

- Motion detector for VISTA V-Plex with DUAL TEC technology
- Uses a combination of PIR passive infrared and K-Band microwave technology

Recommended use/application:

- A perfect fit for lobbies, meeting rooms, classrooms, warehouses and other large-sized areas
- A great fit for multi-tenant or multi-use buildings

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Simple, two-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- V-Plex compatible addressable for compatibility to a wide range of industry-leading control panels requiring fewer power supplies for larger systems
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing environments (i.e. fans, motors) throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

On walls, located at a height of 6' to 9' from the floor in corners or along the wall

Product dimensions:

4.93" H x 2.93" W x 1.68" D

Recommended pattern:

50' x 60' Lens (large)

Compatibility:

All VISTA control panels equipped with V-Plex addressable technology:

VISTA-32FB	FA1600C
VISTA-128BP	FA1660C
VISTA-128FBP	FA1670C
VISTA-250BP	FA1700C
VISTA-250FBP	

Temperature:

-4° F to 131° F (-20° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- Provided by V-Plex Bus
- 3mA (LED disabled); 6mA (LED enabled); 6.5mA (during initialization)

Included items:

- 35' x 40' Lens (Animal Immune)
- 50' x 60' Lens – installed

Options available:

- DT7000-LRLK: Long Range lens kit (50' L x 14' W)
- DT7000-PALK: Pet Alley lens kit (35' L x 40' W)
- DT7000-HSLK: High Security lens kit (35' L x 40' W)

5800PIR-COM

Description:

Wireless PIR motion detector for use in larger rooms with a wider temperature range

Recommended use/application:

- Large lobbies, offices, areas and storage rooms
- Wider temperature range also operates in rooms or areas without heating systems
- Use in public or private meeting rooms where cabling is a challenge
- Great for warehouses, meeting rooms and larger work spaces
- One unit covers a room size up to 60' x 80'
- Use multiple units for larger rooms

Product advantages:

- Wireless device requires no cable runs
- Automatic walk-test eliminates the need for a ladder for testing
- Longer battery life – up to 10 years
- Cold-temperature Alert when temperature falls below 45° F
- Remote programmable for fewer service calls
- Dual-temperature slope compensation for more reliable operation at hot temperatures
- Bug Guard minimizes alarms due to movement of small insects within the unit
- UV-protected lens for longer lens life and continued clarity of optics
- Flashlight walk test makes installation, service testing and future inspection easier by eliminating the need for a ladder or cover removal while testing the unit for detection coverage

Mounting options:

- 7' to 9' high on wall
- Mount directly to appropriate mounting surface using screws
- Mount onto optional mounting brackets for surface-mounting on walls, in corners or on ceiling

Product dimensions:

2.375" H x 3.375" W x 1.5" D

Recommended pattern:

Standard Lens – 60' long x 80' wide

Operating range:

- 200' from receiver, repeater or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works well with any Honeywell VISTA wireless receiver such as the 5881ENHC

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

Up to 95% relative, non-condensing

Power:

Battery powered device – up to ten years battery life (Honeywell #466, Duracell DL 123A, Sanyo CR123A, Panasonic CR 123A)

Included items:

- Lens mask
- Mounting screws
- One CR123A battery
- 60' x 80' Lens (large room) – installed
- 100' x 20' Lens (long-range, barrier, curtain) – included

Options available:

- SMB10: Universal wall-mount bracket
- SMB10C: Universal ceiling-mount bracket
- SMB10T: Universal wall-mount bracket, tampered

Description:

PIR motion detector for medium to large-sized rooms

Recommended use/application:

- Use in commercial offices and industrial warehouse environments
- Great for lobbies, storage rooms and work space
- One unit covers a room size up to 60' x 85'
- Use multiple units for monitoring larger rooms and areas

Product advantages:

- 45° terminal blocks
- DIP switch programming
- Spare EOL terminals
- Automatic Walk Test mode
- Four sensitivity settings
- 7' 6" to 9' mounting height
- Uniform sensitivity optics
- Patented mirror look down
- SIA PIR-01 false alarm compliant
- Dual slope temperature compensation
- Works with SMB10 family of swivel brackets
- Microprocessor controlled
- Totally silent tamper proof relay

Detection method:

Dual Element Passive Infrared

Operating range:

60' long x 85' wide

Mounting height:

7' 6" to 9'

Product dimensions:

4.375" H x 2.25" W x 1.5" D

Power requirements:

8.5 – 15.4VDC

Current draw:

- IS2560/T = 17 mA nominal, 20 mA Max
- IS2560TC = 21 mA nominal, 25 mA Max

Alarm relay:

- IS2560/T = Form A (normally closed), 30 mA, 24VDC, 40 Ohms resistance max
- IS2560TC = Form C (normally open/closed), 30 mA, 24VDC, 40 Ohms resistance max

Tamper switch:

Front (IS2560T) and Cover/Back (IS2560TC) = Form A (normally closed), 30 mA, 24VDC

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

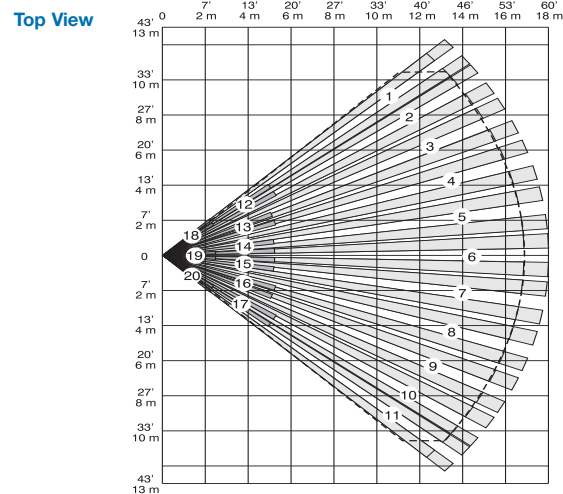

5-95% relative, non-condensing

Options available:

- IS2560: PIR with no tamper supervision
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Listings:

- UL/cUL Listed to UL639, CAN/ULC-S306
- SIA PIR-01

Motion Detectors for Barrier-Style Protection

Using a motion detector to create an invisible barrier of protection can be advantageous when separating a building, protecting a long hallway, covering a long wall of windows, or as a backup protection measure for a row of rollup doors in a shipping warehouse. In any case, the barrier-style protection pattern is an effective method for many kinds of sites.

Honeywell offers a wide variety of motion detectors with patterns suitable to protect rooms of all sizes. This group of motion detectors is suitable for barrier applications and rooms of all sizes.

1. How do you want to connect the motion detector to the system?

- V-Plex Addressable
- 5800 Series Wireless
- Conventional zone inputs

2. Where do you want to locate the motion detector?

- On the wall
- On the ceiling (check ceiling height)

3. Will the detector be located in a room occupied by the general public, such as in lobbies, classrooms, libraries or in rooms of similar uses? Are you concerned about intentional sensor tampering or masking of its view?

- Consider choosing a motion detector that includes tamper supervision for its cover and its base
- Consider choosing a motion detector that features anti-mask supervision to avoid blockage of its view

4. Will the detector be located in an area that normally experiences wide changes in temperature, or is the location likely to experience very low temperatures at night?

- Consider choosing a motion detector designed for low temperature environments

5. In each connectivity group, find the sensor technology:

- PIR – for stable environments, these detectors work best in areas with no open windows and minimal air flow
- DUAL TEC – for harsh environments such as drafty areas in front of windows, warehouse and storage environments or in multi-tenant facilities

6. Check the dimensions of the protected area against the pattern diagram to find the most suitable motion detector for your application.

7. If you choose a motion detector pattern that is smaller than the area you are protecting, you can improve system detection by using more than one to cover the area. This also allows the system to provide more accurate information about the location of the motion detected in the building.

8. Are animals present in the area to be protected (i.e. birds, cats, rodents, dogs)?

- Consider detectors with animal immunity

9. Are there valuables in the area to be protected, a high security application, or an area where the sensors are expected to be tampered with in an attempt to defeat them?

- Consider sensors with look down zones, protecting the area directly beneath the detector
- Consider sensors with AntiMask technology, guarding against masking of the PIR visibility

DT7500SN

(with DT7000-LRLK Long-range Lens Kit)

Smart Contact Technology: Senses when system is armed or disarmed. When armed it switches to high-security mode. When disarmed it activates standby mode to reduce activity on the V-Plex bus. Smart Contact Technology is available with VISTA-32FB, VISTA-128FBP, VISTA-128BPT, VISTA-250FBP and VISTA-250BPT control panels.

Remote Walk-test LED Enable: Eliminates the need for a ladder or the need to open the detector to activate the walk-test LED. Available with VISTA-128BPT and VISTA-250BPT control panels.

Description:

- Motion detector for VISTA V-Plex with DUAL TEC technology
- Uses a combination of PIR passive infrared and the revolutionary K-Band microwave technology

Recommended use/application:

- Provides effective coverage in hallways, walls with multiple windows, inside long storefronts, and as a backup security measure for long rows of overhead doors in warehouses
- A perfect fit for schools, warehouses, industrial centers, office complexes and other large-sized areas
- A great fit for multi-tenant or multi-use buildings

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Simple, two-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- V-Plex compatible addressable for compatibility to a wide range of industry-leading control panels requiring fewer power supplies for larger systems
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing environments (i.e. fans, motors) throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

On walls, located at a height of 7' 6" from the floor in corners or along the wall

Product dimensions:

4.93" H x 2.93" W x 1.68" D

Recommended pattern:

DT7000-LRLK: Long-range mounting kit for barrier-style protection (sold separately; pattern 10' x 50'; 10 pack)

Compatibility:

All VISTA control panels equipped with V-Plex addressable technology:

VISTA-32FB	FA1600C
VISTA-128BP	FA1660C
VISTA-128FBP	FA1670C
VISTA-250BP	FA1700C
VISTA-250FBP	

Temperature:

-4° F to 131° F (-20° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- Provided by V-Plex Bus
- 3mA (LED disabled); 6mA (LED enabled); 6.5mA (during initialization)

Included items:

- 35' x 40' Lens (Animal Immune)
- 50' x 60' Lens – installed

Options available:

- DT7000-LRLK: Long Range lens kit (50' L x 14' W)
- DT7000-PALK: Pet Alley lens kit (35' L x 40' W)
- DT7000-HSLK: High Security lens kit (35' L x 40' W)
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Listings:

- ETL/cETL Listed to UL639, CAN/ULC-S306.01/3

Description:

PIR motion detector for VISTA V-Plex addressable systems

Recommended use/application:

- Provide interior protection coverage for a row of doors or windows along a common wall
- A perfect fit for long storefronts, lobbies, hallways, classrooms and other large-sized rooms where barrier protection is needed
- A great fit for schools malls and office complexes

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Simple, two-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- V-Plex compatible/addressable for compatibility to a wide range of industry-leading control panels requiring fewer power supplies for larger systems
- On-board LED status indicator
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

On walls or on SMB10 Brackets (listed under options available) for walls and ceilings located at an ideal height of 6' to 9' from the floor in corners or along the wall

Product dimensions:

4.92" H x 2.94" W x 1.72" D

Recommended pattern:

50' x 60' (large)

Compatibility:

All VISTA control panels equipped with V-Plex addressable technology:

5898

Description:

Barrier-style, wireless DUAL TEC motion detector with remotely selectable animal immunity and temperature monitoring capabilities

Recommended use/application:

- Use in barrier, hallway or curtain applications in rooms up to 50 feet across
- Use within a wide variety of locations such as offices, restaurants, warehouses and retail spaces
- Exclusive K-Band technology makes this a perfect fit for multi-tenant or multi-partitioned systems
- Excellent for rooms with wide temperature changes from -4° F to 122° F (-20° C to 50° C)

Product advantages:

- Easy install, easy testing, easy adjustment saves money with every installation
- Five-year battery life
- Selectable animal immunity adjustable for 0, 50 lb or 100 lb animals
- Fully-supervised wireless connection requires no cabling between the control panel and the detector
- Temperature alerts for high (above 95° F) and low (below 45° F) temperature conditions
- Remotely programmable animal immunity from downloading software – adaptable to new building uses such as food storage and others where rodents may suddenly appear
- K-Band microwave technology reduces false activations from occupied adjoining areas
- Reduced back lobe effect minimizes false activation from activity behind the wall where the unit is mounted
- Flash light activates timed walk test. No need for ladders. No need to touch the detector before or after testing – makes the test more reliable.
- Dual slope temperature compensation allows the detector to automatically adjust to background temperatures and offers a better comparison of the background and the moving object
- Front and back tamper make the unit suitable for location in public areas
- Sealed optics and patented black bug guard minimizes false alarms due to the presence of insects within the housing
- Look down optic zone senses a pattern just below the unit
- Digital fluorescent light interference filter overcomes interference caused by noisy fluorescent fixtures
- Automatically compensates for the presence of operating business machines such as fans in PCs, cash registers, projectors and other commonly-used business equipment

5898 (continued)

Mounting options:

- Mount at a height between 7 ft and 9 ft high on the wall, either flat on the wall surface or in a corner
- Mount on the wall using SMB10 swivel mounting bracket
- Mount on the ceiling using the SMB10C swivel mounting bracket

Product dimensions:

2.94" W x 4.92" H x 2.05" D

Recommended pattern:

50' x 8' (DT7000-LRLK barrier-style lens ordered separately)

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works with all Honeywell VISTA series systems equipped with 5800 Wireless receivers

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

Up to 95%, non-condensing

Power:

Lithium

Included items:

- 50' x 60' Lens
- Mounting screws
- Batteries

Options available:

- DT7000-LRLK: Long Range lens kit (Pattern 50' x 8')
- SMB10: Universal wall-mount bracket
- SMB10C: Universal ceiling-mount bracket

Listings:

5800PIR-COM

Description:

Wireless PIR motion detector for use in large rooms with a wider temperature range for barrier-style applications

Recommended use/application:

- Provide primary detection in hallways. Divide large warehouses and meeting rooms using a barrier.
- Provide backup detection behind a row of windows or a row of rollup doors
- Long hallways, warehouses, areas and storage rooms
- Wider temperature range also operates in rooms or areas without heating systems
- Use in public or private meeting rooms where cabling is a challenge
- Great for warehouses, meeting rooms and larger work spaces
- One unit covers a room size up to 100' x 20'
- Use multiple units for longer protection areas

Product advantages:

- Wireless device requires no cable runs
- Automatic walk-test eliminates the need for a ladder for testing
- Longer battery life – up to 10 years
- Cold-temperature alert when temperature falls below 45° F
- Remote programmable for fewer service calls
- Dual-temperature slope compensation for more reliable operation at hot temperatures
- Bug Guard minimizes alarms due to movement of small insects within the unit
- UV-protected lens for longer lens life and continued clarity of optics
- Flashlight walk test makes installation, service testing and future inspection easier by eliminating the need for a ladder or cover removal while testing the unit for detection coverage

Mounting options:

- 7' to 9' high on wall
- Mount directly to appropriate mounting surface using screws
- Mount onto optional mounting brackets for surface-mounting on walls, in corners or on ceiling

Product dimensions:

2.375" H x 3.375" W x 1.5" D

Recommended pattern:

Standard Lens – 100' long x 20' wide

Operating range:

- 200' from receiver, repeater or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

Works well with any Honeywell VISTA wireless receiver such as the 5881ENHC

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

Up to 95% relative, non-condensing

Power:

Battery powered device – up to 10 years battery life (Honeywell #466, Duracell DL 123A, Sanyo CR123A, Panasonic CR 123A)

Included items:

- Lens mask
- Mounting screws
- One CR123A battery
- 60' x 80' Lens (large room) – installed
- 100' x 20' Lens (long-range, barrier, curtain) – included

Options available:

- SMB10: Universal wall-mount bracket
- SMB10C: Universal ceiling-mount bracket
- SMB10T: Universal wall-mount bracket, tampered

- ETL
- FCC
- IC

100' / 30 m Long Range Curtain Lens / Objectif Longue Portée / Lente de Largo Alcance [P/N 5-532-384-01 (Included)]

DT7450C

Description:

- DUAL TEC Motion Detector with K-Band technology
- Uses a combination of PIR passive infrared and the revolutionary K-Band microwave technology

Recommended use/application:

- Use for commercial buildings, auditoriums, schools, and industrial warehouse environments
- Great for small to medium hallways and inside large warehouse loading door areas or along a wall of windows
- Barrier applications: One unit covers a space 50' long x up to 10' wide
- Use multiple units for monitoring larger rooms and areas

Product advantages:

- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures, and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

- On walls, located at a height of 7' 6" from the floor in corners or along the wall or on SMB10 brackets (listed under options available) for walls and ceilings
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Description:

DUAL TEC motion detector with PIR, microwave and anti-masking technology

Recommended use/application:

- Use in commercial buildings, auditoriums, schools and industrial warehouse environments
- Great for long hallways and inside large warehouse loading door areas
- One unit covers a space 15' wide x up to 200' long
- Use multiple units for longer coverage

Product advantages:

- Mask-alert technology guards unit from being blocked
- DUAL TEC technology reduces false alarms
- Digital fluorescent light filter minimizes interference
- Adaptive baseline and bidirectional temperature compensation makes the unit perform better in harsher environments

Mounting options:

- 6' to 12'
- Wall mounted on flat surface, single-gang electrical box, using a swivel mount bracket

Product dimensions:

6" H x 6.5" W x 8" D

Operating range:

IS216T-CUR

Description:

Wall mounted curtain motion detector for hallways long rooms, and even skylight openings

Recommended use/application:

- Use in smaller indoor environments
- Great for small offices, lobbies and work spaces
- Coverage pattern is 33' x 5.5'
- Use multiple units for larger rooms

Product advantages:

- Unique ceiling mount for curtain applications in public spaces
- Low current draw
- Digital fluorescent light filter minimizes interference
- Adaptive baseline and bidirectional temperature compensation makes the unit perform better in harsher environments
- Can be mounted sideways

Mounting options:

7' 6" to 9' high on wall

Product dimensions:

3.375" H x 2.375" W x 1.5" D

Operating range:

- Vertical mounting: 33' L x 5.5' W
- Horizontal mounting: 20' L x 33' W
- Ceiling mounting: 8' L x 25' W

IS2500LT

Description:

PIR motion detector with lower temperature technology designed for indoor unheated environments

Recommended use/application:

- Provide interior protection coverage for a row of doors or windows along a common wall
- A perfect fit for low-temperature applications such as closed garages, mechanic shops, wood shops, storage sheds, green houses, enclosed outdoor nursery areas and other shed-like environments

Product advantages:

- Effective in a wider variety of temperature ranges
- Small, large and barrier lenses included for a wide variety of applications
- Discrete, low profile – not a distraction from style and architecture
- Simple, four-wire installation
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in – the detector resists false alarms due to radio communication and other typical interference

Mounting options:

Directly on walls or on SMB10 mounting brackets (listed under options available) for walls and ceilings located at height of 7' 6" to 9' from the floor in corners or sides of the room or area

Product dimensions:

4.375" H x 2.25" W x 1.5" D

Recommended pattern:

100' x 20' Lens (long-range, barrier, curtain)

Compatibility:

- All controls and zone input modules providing compatibility with dry contact output activation upon status change
- 12VDC power input required
- Form C/SPDT

Temperature:

-40° F to 131° F (-40° C to 55° C)

Humidity:

5-95% relative, non-condensing

Power:

- 8.5-15.4VDC
- Idle 21mA
- Alarm 25mA

Included items:

- 35' x 40' Lens (small rooms) – installed
- 60' x 85' Lens (large rooms)
- 100' x 20' Lens (long-range, barrier, curtain)

DUAL TEC Family Features

Animal Immune to 100 lbs.:

Sensor is immune to pets and other animals with combined weight of 100 lbs. when installation guidelines for animal immunity are followed

Coverage Pattern:

Length by width of area protected

Signal Processing:

Analysis performed on PIR and microwave signals to determine alarm conditions

- DualCore – Signals are analyzed in multiple domains, including amplitude, time, frequency and duration. Supports functions including diagnostics and other advanced false alarm features.
- C3 – Correlates data from both channels simultaneously, instead of independently processing each
- MAP – Timing and sequence of signals are compared to settings for specific environments to qualify each channel individually
- Queue Event Logic – Pulse counting while looking for specific sequences of events
- Advanced – Pulse counting with timing relationships
- Standard – Basic pulse counting

Optical Technology:

Technology used to collect infrared radiation for PIR processing

- Uniform Sensitivity – Fresnel lens that provides the same sensitivity at the edge of the pattern as exists directly in front of the sensor
- Split-Zone – Zones are split into two sub-zones where each sub-zone has half the sensitivity of a regular zone, requiring targets to be in both zones for an alarm
- Standard – Basic Fresnel lens
- Mirror – Basic mirror optics

Microwave Frequency Band:

Frequency at which the microwave signal is radiated and received. Higher frequencies generally penetrate non-metallic objects less than lower frequencies.

- S-Band – 2.54 GHz
- X-Band – 10.525 GHz
- K-Band – 24.125 GHz

Environmental Adaption:

Microwave thresholds are adapted either in hardware or digitally to remove the effect of low level interference such as ceiling fans

Temperature Compensation:

Sensor automatically adjusts PIR thresholds and/or other parameters to adapt to change in ambient temperature relative to human body temperature

- Standard – Compensates at ambient temperatures below body temperature
- Advanced – Compensates at ambient temperatures both below and above body temperature

Digital Fluorescent Light Filter:

Software algorithms provide infinite rejection of microwave interference due to fluorescent lights

Analog Fluorescent Light Filter:

Hardware circuitry provides rejection of microwave interferences due to fluorescent lights.

Anti-Masking:

Detects intentional and accidental blocking of the PIR optics

Walk Test Mode:

Determines the coverage pattern and functionality for both the PIR and microwave channels, usually through LED indicators

PIR Sensitivity Adjustment:

Selectable option to change the PIR process sensitivity, usually through a DIP switch or jumper link

Microwave Sensitivity Adjustment:

Selectable option to change the microwave sensitivity and/or range, usually through a potentiometer

Vertical Adjustment:

Capability to adjust the vertical PIR detector position relative to the optics, usually through a vertical shift in the PCB. Usually used to adjust range at different mounting heights, or accurately set the coverage pattern for different lenses or mirrors.

Horizontal Adjustment:

Capability to shift the PIR zones left or right by a few degrees. Usually used to locate potential false alarm sources, such as a heating vent between zones, or to aim the optics in a particular direction, such as a hallway.

Trouble Output:

Separate output used to indicate supervision failures and/or anti-mask detection to the control panel

Alarm Relay Forms:

Type of output relay used to signal panel when an intrusion is detected.

- Form A – Two-terminal relay with Normally Closed output when energized
- Form C – Three-terminal relay with both Normally Closed and Normally Open outputs when energized

LED Indicators:

Light Emitting Diodes used to provide visual feedback about alarm state, supervision, walk test and other modes of operation

- 1 LED – Single red LED
- 3 LEDs – Red, green, yellow LEDs, usually with PIR and microwave channels associated with a specific color

Microwave Supervision:

Automatic self-test of microwave channel for proper operation

PIR Supervision:

Automatic self-test of microwave channel for proper operation

Recommended Mounting Height:

Suggested height to mount processor for optimal performance. Usually important for animal immune applications.

Operating Temperature:

Temperature range at which the sensor can be expected to provide adequate protection. UL certification may have a narrower range.

Input Voltage:

Voltage range at the terminal strip at which the sensor will operate. UL may have certified for a slightly narrower range.

Swivel Bracket Options:

Brackets used to mount sensors in installations that have special aiming or mounting heights

Mounts

Mounting brackets for use with DT7000, DT6100, IS2500, IS215, 5894PI and 5800PIR Series of detectors:

0-000-110-01
SMB10 Universal White Swivel Mount Bracket (5 pack)

0-000-111-01
SMB10C Universal White Ceiling Mount Bracket (5 pack)

0-000-155-01
SMB10T Tampered Universal White Swivel Mount Bracket (5 pack)

Lenses

DT7000-LRLK Long Range Lens Kit (10 pack)

Provides:

- 35' x 8' when used with DT7235, DT7435
- 50' x 10' when used with DT7450, DT7550, DT7500SN, IS2500SN

Protecting Outdoor Areas

Theft of remote farming equipment, outdoor supply inventory, tools and vehicles is something to consider in industrial, campus, agriculture and automotive industries. Protecting rooftops to help manage losses related to high-value HVAC equipment components and electrical cabling is also a challenge. Honeywell can help you manage outdoor risks. We offer a number of products that will help cover your outdoor protection needs, anywhere that outdoor storage is needed. Honeywell offers time-tested outdoor detection products like photoelectric beams and labor-saving wireless outdoor PIR motion detectors.

Use Honeywell's unique line of outdoor detection products to provide coverage for rooftops, fence lines, outdoor parking areas, storage areas, yards, fields, playgrounds and other fenced-in outdoor areas.

5800PIR-OD

Description:

Wireless outdoor PIR for Honeywell VISTA 5800 Series wireless systems

Recommended use/application:

- When outdoor motion detection is required, such as in the case of secured outdoor areas, cellular sites, electrical substations and public utility storage yards
- Use for commercial locations employing 5800 wireless receivers and transceivers

Product advantages:

- Ideal for outdoor use
- Adjustable view field and pattern
- Dual PIR sensors in one unit to minimize false activations
- Immune to bright lights and flashes
- Can be located up to 200' from receivers, transceivers or repeaters
- Tampered front and back
- Continual battery and tamper supervision
- Regular supervision check-in signals
- Adjustable battery-saving feature
- Seven-day low battery advanced warning before failure
- Large and small animal immune

Mounting options:

- **On walls:** Locate between 2.7' and 4' from the ground. Operates best if you can mount in the general line of sight of receivers, repeaters and transceivers.
- **On poles:** Clamp included

Product dimensions:

7.8" H x 3.2" W x 4.7" D

Recommended pattern:

- Adjustable 7'– 40'
- 90° pattern adjustable within 180° field

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range available in larger buildings with clear, open spaces

Compatibility:

All VISTA Control panels that are compatible with 5800 Series Wireless devices.

Temperature:

-4° F to 122° F (-20° C to 50° C)

Humidity:

0-95%

Power:

Four 1.5 V lithium AA cells included (Model 462)

Included items:

- Four 1.5V AA Lithium batteries (low temperature)
- Pole mount kit
- Mounting screws
- Lens masking

Listings:

- FCC
- IC

Top View

IB100D

Description:

Photoelectric beam for use in small to medium indoor or outdoor applications

Recommended use/application:

- Ideal for outdoor applications like fence lines, parking areas, outdoor stock areas, garden centers, nursery and grower buildings, driveway and roadway alarms
- Ideal for indoor applications like stock isle protection, backup protection for shipping and receiving doors
- Ideal for outdoor agricultural and live stock applications

Product advantages:

- Easy install, easy testing, easy adjustment saves money with every installation
- Adjustable optics make aiming simple
- Adjustable obscuration time helps overcome environmental issues
- Wide input voltage range minimizes effect from voltage drop on long cable runs
- Designed for quick, weather-resistant conduit connections

Mounting options:

- Requires two mounting locations that are within an open line of sight
- Mount on a sturdy surface, such as a pole, post or wall
- Pole-mount hardware is included
- Locate the receiving unit closest to the control to minimize cabling of tamper and alarm outputs

Product dimensions:

6.75" H x 3.25" W x 2.875" D

Effective range:

- Outdoor: 100 ft (30m)
- Indoor: 300 ft (90m)

Optical adjustment:

- Vertical: 20°
- Horizontal: 180°

Outputs:

- Tamper: Form A
- Alarm: Form C

Temperature:

-13° F to 131° F (-25° C to 55° C)

Humidity:

Up to 95%, non-condensing

Power:

- Transmitter: 27mA @ 10.5VCD to 28VDC
- Receiver: 31mA @ 10.5VCD to 28VDC

Included items:

Pole mounting hardware

Listings:

UL Listed to UL639

IB200D

Description:

Photoelectric beam for use in small to large indoor or outdoor applications

Recommended use/application:

- Ideal for outdoor applications like fence lines, parking areas, outdoor stock areas, garden centers, nursery and grower buildings, driveway and roadway alarms
- Ideal for indoor applications like stock isle protection, backup protection for shipping and receiving doors
- Ideal for outdoor agricultural and live stock applications

Product advantages:

- Easy install, easy testing, easy adjustment saves money with every installation
- Adjustable optics make aiming simple
- Adjustable obscuration time helps overcome environmental issues
- Wide input voltage range minimizes effect from voltage drop on long cable runs
- Designed for quick, weather-resistant conduit connections

Mounting options:

Pole mounting hardware

Listings:

UL Listed to UL639

IB250S

Description:

Photoelectric beam for use in small to larger indoor or outdoor applications

Recommended use/application:

- Ideal for outdoor applications like longer fence lines, parking areas, outdoor stock areas, garden centers, nursery and grower buildings, driveway and roadway alarms
- Ideal for indoor applications like long stock aisle protection, backup protection for shipping and receiving doors
- Ideal for outdoor agricultural and live stock applications

Product advantages:

- Easy install, easy testing, easy adjustment saves money with every installation
- Adjustable optics make aiming simple
- Adjustable obscuration time helps overcome environmental issues
- Wide input voltage range minimizes effect from voltage drop on long cable runs
- Designed for quick, weather-resistant conduit connections

Protecting High-value Business Assets

As technology improves the audio-visual experience and as the cost of certain business machines becomes within reach, we begin to see more common use of flat-screen TVs, video projectors and portable ATM machines in public areas. In places like restaurants, hotel lobbies, retail locations, lounges and common business offices, these items are easy to remove even during normal business hours.

Honeywell offers a number of powerful products to help you manage risks related to high-value business assets. We offer seismic detectors for safes, vaults, ATMs and vending machines. We offer movement detectors that help you protect paintings, flat-screen monitors, projectors, registers, computers and a wide variety of other business assets. Protect your image and your investment with Honeywell's asset protection devices.

5870API

Asset Protection

Guard against theft with Honeywell's exciting new 5870 Asset Protection Sensor. Utilizing 5800 Series wireless and advanced technology, the device easily affixes to any asset needing to be protected within a business. It is ideal for paintings, safes, flat screen TV's, electronics, equipment and more.

Description:

Wireless indoor asset protection sensor

Recommended use/application:

- Museums and art galleries (paintings and sculptures)
- Universities and schools (computers, projectors, laboratory equipment)
- Office (printers, copiers, computers and cash box)
- Construction sites (tools and building materials)
- Ideal for Total Connect awareness applications

Product advantages:

- Offer an additional layer of protection which is always on (even when the panel is disarmed)
- Ideal for theft protection and alarm verification
- Protect specific assets while complementing the interior space protection
- Quick and easy installation
- Increase content per sale and RMR

Product dimensions:

1.8" H x 1.7" W x 0.63" D
(45.72 mm x 43.18 mm x 16.02 mm)

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range is available in larger buildings with wide, open spaces

Temperature:

14° to 122°F (-10° to 50°C)

Humidity:

<90% relative, non-condensing

Power:

Lithium battery (Single 3V Honeywell model 469, Panasonic CR2, Sanyo CR2, Duracell DLCR2) – included

Options available:

- 5870API-WH: White
- 5870API-GY: Gray

Listings:

- UL Listed to UL1037
- FCC Part 15
- IC

Modes of Operation:

High Security (Fast Trigger) Mode (Loop 1)

Standard Security Mode (Loop 2)

SC100

Description:

Seismic sensor that detects tampering and attack of high security safes and ATM machines

Recommended use/application:

- Use to detect tampering or burglary of safes, vault doors, ATMs, night deposit safes, strong room vaults, modular vaults, free-standing safes, hatches, gates and chests
- Excellent for use in areas with wide temperature range, -58° F to 158° F (-50° C to 70° C)
- 5m detection radius makes this unit ideal for larger vaults, safes and commercial ATM machines

Product advantages:

- Simple install, easy testing and effortless adjustment saves money with every installation
- Temperature alerts detect entry by torch; above 158° F (70° C)
- Built-in EOL resistor selection saves steps
- Mounting hole patterns match most competitor screw mounting patterns simplifying replacement when replacing older or malfunctioning devices
- Four different sensitivity settings make the unit configurable for a wide variety of applications
- Wide variety of accessories available extending the product's detection capabilities
- Optional keyhole protection kit extends protection to the safe's keyhole
- Optional internal or external test transmitters allow the system user to easily test the unit from the normal system arming location
- Optional armored cable makes conduit connection fast, secure and effective

Mounting options:

Mount onto the safe, vault, ATM, or night deposit safe

Product dimensions:

3.15" H x 2.36" W x 0.83" D

Compatibility:

All control panels that accept a hardwired zone

Temperature:

-58° F to 158° F (-50° C to 70° C)

Humidity:

Up to 95%, non-condensing

Power:

1.3mA @ 12VDC

Options available:

- SC110: Mounting Plate
- SC111: Movable Mounting Kit
- SC112: Keyhole protection Kit
- SC113: Internal Test Transmitter
- SC114: Armored Cable (1.8m)
- SC115: External Test Transmitter

Listings:

UL/cUL Listed to UL639, CAN/ULC-S306

SC105

**Description:**

Seismic sensors detect tampering and attack of cabinets or vending and ATM machines located in public areas

Recommended use/application:

- Use to detect tampering or burglary of lobby ATMs, filing cabinets, containers, vending machines, gates and chests, chemical or pharmaceutical storage
- Excellent for use in areas with wide temperature ranges, -58° F to 158° F (-50° C to 70° C) such as soda and candy vending machines
- 3m detection radius makes this unit ideal for vending machines, smaller safes and lobby-style ATM and ticket machines

Product advantages:

- Simple install, easy testing and effortless adjustment saves money with every installation
- Temperature alerts detect entry by torch; above 158° F (70° C)
- Delayed triggering option helps reduce unwanted activation in public areas
- Built-in EOL resistor selection saves steps
- Mounting hole patterns match most competitor screw mounting patterns simplifying replacement when replacing older or malfunctioning devices
- Four different sensitivity settings make the unit configurable for a wide variety of applications
- Wide variety of accessories available extending the product's detection capabilities
- Optional keyhole protection kit extends protection to the safe's keyhole
- Optional internal or external test transmitters allow the system user to easily test the unit from the normal system arming location
- Optional armored cable makes conduit connection fast, secure and effective

Mounting options:

Mount onto the vending machine, lobby ATM, filing cabinet or secured container

Product dimensions:

3.15" H x 2.36" W x 0.83" D

Compatibility:

All control panels that accept a hardwired zone

Temperature:

-58° F to 158° F (-50° C to 70° C)

Humidity:

Up to 95%, non-condensing

Power:

1.3mA @ 12VDC

Options available:

- SC110: Mounting Plate
- SC111: Movable Mounting Kit
- SC112: Keyhole protection Kit
- SC113: Internal Test Transmitter
- SC114: Armored Cable (1.8m)
- SC115: External Test Transmitter

Protecting Windows and Glass Panes

FlexGuard lets you provide your customers with the highest level of security, unmatched detection and false alarm immunity without labor and installation headaches or costly service calls.

FlexGuard is also the industry's most versatile glassbreak—the only one to offer a choice of hardwired, wireless or V-Plex polling loop technology for the ultimate in installation flexibility. It makes perimeter protection as easy to provide and trouble-free as any other part of the system.

FlexGuard detectors mount virtually anywhere—on walls, window frames or ceilings—and are UL and ULC listed for all glass types, including plate, tempered, laminated, wired, film-coated and sealed insulating. Rigorously challenged in test rooms built to exceed the toughest standards, it's no wonder there are more installed worldwide than any other brand of glassbreak.

Dealers worldwide rely on Honeywell's FlexGuard® glassbreak detectors as a first line of defense because they help keep intruders where they belong—outside.

Protecting Windows and Glass Panes

There are many types of glass used for windows and doors. To avoid having to note every glass type for each window in the building, it is important to have the ability to sense the characteristics and patterns associated with a wide variety of common glass types like:

- Plate
- Tempered
- Laminated
- Coated
- Wired
- Double pane, sealed and insulated

Also, consider that the distance of a designated glassbreak detector location might be very close to the window that it is protecting. The sensor should be designed to suppress very loud noises associated with a near window break so that it performs as expected.

Security films: Coated glass with security films up to 12 mils (0.3mm) thick including film for solar protection may be used.

As a final consideration, simplifying installation helps you to manage risks related to injury and property damage. Consider choosing installation-friendly features like:

- **Secure mounting screws:** The detector is designed to hold the mounting screws in place as installers raise the detector to its mounting surface. While on a ladder, this eliminates the need to hold the sensor with one hand while searching the tool belt for screws.
- **Cable-routing channels:** To support mounting the sensor flatly upon its surface while protecting terminal connections from sudden movement in cables, routing channels allow the cable to lead into the unit at the correct angle while securing the cable from jarring.
- **Easier, more reliable test mode:** Our test method uses a tester that activates an accurate test from the floor, so your technician need not bring the ladder inside.

Configuring the glassbreak range is vital to the detector's performance. The information below provides the settings for the detector's sensitivity (range)*.

Sensitivity	Approximate Range**
Max	25 ft. (7.6m)
Medium	15 ft. (4.6m)
Low	10 ft. (3m)
Lowest	5 ft. (1.5m)

*This information shows the patterns for the glassbreaks included in this section.

**The acoustic characteristics of all rooms vary. Always verify proper sensitivity with FG701 Glassbreak Simulator/Tester.

FG1625

Description:

Glassbreak detector

Product advantages:

- FlexCore™ processing
- New hinged-case styling – nearly 180° opening
- Four adjustable sensitivity settings
- 25' range/no minimum range
- Remote test mode activation
- Protected PCB

Product dimensions:

4.5" H x 2.8" W x 1.05" D

Temperature:

14° F to 120° F (-10° C to 48.9° C)

Power:

12VDC 12mA idle, 22mA alarm

Options available:

- FG1615: Non-adjustable with 15' fixed range
- FG1625T: Tamper/Form "C" Relay

Listings:

UL/cUL/ULC Listed to UL639, CAN/ULC-S306

FG1625SN

Description:

V-Plex glassbreak detector

Product advantages:

- FlexCore™ processing
- Serial number addressable*
- Set-up and performance identical to the FG1625
- Four adjustable sensitivity settings
- 25' range/no minimum range
- Remote test mode activation
- Protected PCB

Product dimensions:

4.5" H x 2.8" W x 1.05" D

Temperature:

14° F to 120° F (-10° C to 48.9° C)

Power:

V-Plex bus 1mA idle, 5mA LED illuminated

Listings:

UL/cUL/ULC Listed to UL639, CAN/ULC-S306

*For use with Honeywell V-Plex addressable control panels.

5853

Description:

Wireless glassbreak detector

Product advantages:

- FlexCore™ processing
- Set-up and performance identical to the FG1625
- Hinged-case styling – nearly 180° opening
- Easily replaceable batteries with up to a 10 year battery life
- Four selectable sensitivity settings (max, medium, low and lowest)
- 25' range/no minimum range
- Covers all glass types
- Remote test mode activation
- Protected PCB

Product dimensions:

4.5" H x 2.8" W x 1.05" D

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range is available in larger buildings with wide, open spaces

Temperature:

14° F to 120° F (-10° C to 48.9° C)

Power:

Two 3V lithium batteries (Honeywell model 466, Duracell DL123A, Panasonic CR123A, Sanyo CR123A, Varta CR123A)

FG1625R

Description:

Glassbreak detector

Product advantages:

- FlexCore™ processing
- Round case styling
- Four adjustable sensitivity settings
- 25' range/no minimum range
- Remote test mode activation
- Protected PCB

Product dimensions:

0.875" H x 4.25" diameter

Temperature:

14° F to 131° F (-10° C to 55° C)

Power:

12VDC 12mA idle, 22mA alarm

Option available:

FG1625RT: Tamper/Form "C" Relay

Listings:

UL/cUL/ULC Listed to UL639, CAN/ULC-S306

FG1608

Description:

Glassbreak detector with magnetic contact

Product advantages:

- FlexCore™ processing
- Built-in magnetic contact
- High/low sensitivity setting
- 8' range/no minimum range
- Remote test mode activation
- Magnetic contact gap:
 - make gap = 0.9" minimum
 - break gap = 2.2" maximum

Glassbreak housing:

4.562" H x .312" W x 1.25" D
(11.6 cm x 2.3 cm x 3.2 cm)

Magnet housing:

4.562" x .938" x .5"
(11.6 cm x 2.3 cm x 1.3 cm)

Temperature:

14° F to 131° F (-10° C to 55° C)

Power:

13mA typical @ 12VDC, 22mA max @ 12VDC
(LED latched)

Listings:

UL/cUL/ULC Listed to CAN/ULC-S306

FG1625RFM

Description:

Hardwire flush mount glassbreak detector

Product advantages:

- FlexCore™ processing
- Recess mounts in a 1" diameter hole in ceilings or walls
- Four adjustable sensitivity settings
- Staggered "T" terminals for easy wiring
- 25' range/no minimum range
- Remote test mode activation

Product dimensions:

- Sleeve: 1" hole, 2.6" deep
- Large cover: 2.5" diameter
- Small cover: 1.8" diameter

Temperature:

14° F to 131° F (-10° C to 55° C)

Power:

12VDC 5.5mA idle, 12mA alarm

Listings:

UL/cUL/ULC Listed to UL639, CAN/ULC-S306

FG701

Description:

Glassbreak simulator/tester

Product advantages:

- Compatible with all IntelliSense and ADEMCO acoustic glassbreak detectors
- Remote test mode activation operates from 15' away*
- Calibrated signal output to allow true range verification
- Low battery announcement
- Digitally produced glassbreak sound

Power:

9V battery

*When used with FG1500 and FG1600 Series glassbreak detectors.

Protecting Areas from Temperature and Water Damage

In commercial settings, the damages from flood and extreme temperature changes can be personally and financially devastating—making it critical to incorporate environmental sensors as a part of your security installations.

Floods

Which scenario would you be more likely to accept...a slow leak under a sink or a broken pipe resulting in a fast gushing flood?

A slow leak results in an unknown loss of water, rotting of building materials and the slow development of toxic molds. Reconstruction of plumbed areas and mold removal are costly services. Although a fast soaking from a broken pipe is easier to detect, the water leak may go undetected for hours during off hours—resulting in damage to floors and wall materials and potential slip-and-fall injuries, which increase the risk of litigation and liability claims.

Extreme Temperatures

In many commercial environments, including medical labs and restaurants, maintaining the correct temperature is a critical concern.

Pharmaceuticals stored in at incorrect temperatures may lose their remedial effectiveness. Crystallization of liquids can cause an unwanted separation of product ingredients, resulting in the dispensing of either inert or only concentrated effective ingredients. Powders and pills may melt or clump, resulting in more challenging counting or handling during dispensation.

When frozen foods thaw, spoil and are refrozen due to incorrect temperatures, there is a risk of sickness, death, loss of inventory and potential litigation and liability claims.

Honeywell Solutions

Honeywell offers a number of detection devices that can be easily integrated into security systems, helping businesses to manage risks related to water leaks, floods and temperature changes. When incorporated with Honeywell's Total Connect Remote Services, they can be alerted to these changes and get the information they need to help avert or minimize damages and dangerous conditions. See the next couple of pages for recommended products.

5821

Description:

Wireless temperature sensor and flood detector

Recommended use/application:

- Honeywell's 5821 is a versatile wireless device that can be configured to operate as either a standalone temperature sensor and/or a remote temperature sensor or flood detector
- It is ideally suited for a wide range of applications including bathrooms, laundry rooms and basements

Product advantages:

- Five selectable temperature ranges
- Local or remote temperature probe
- Up to 10 year battery life
- Transmits supervisory, tamper and low battery
- Can monitor low temp sensing plus any other function simultaneously

Product dimensions:

3.1" H x 1.6" W x 1" D

Operating range:

- 200' from receiver, repeater, or transceiver in semi-enclosed buildings
- Greater range is available in larger buildings with wide, open spaces

Included items:

Replaceable battery

Options available:

- T280R: Temperature probe
- 470PB: Remote water probe

Listings:

- FCC Part 15
- IC

T280R

470PB

TS300

**Description:**

Dual temperature sensor

Product advantages:

- Simultaneous operation of local and remote probes
- Programmable hysteresis prevents multiple alarms
- Local audio alarm with silence time out
- Alarm memory (up to eight events)
- Two programmable outputs

Temperature:

- Local sensor:
32° to 140° F (0° to 60° C) +/-3° F (+/- 1.7° C)
- Remote probe:
-40° to 140° F (-40° to 60° C) +/-4° F (+/-2.2° C)

Power:

7-16VDC, 25mA max.

Option available:

T280R: Temperature probe

T280R

470-12

**Description:**

Water sensor

Recommended use/application:

Ideal for placement by sump pumps, washing machines, kitchens, etc., where flooding is a possibility

Product advantages:

- Will detect water or any conductive nonflammable liquid
- Form C (SPDT) output
- Provided with two sensitivity settings for greater flexibility

Power:

12VDC, 40mA max.

Included items:

Includes one remote water probe (470PB)

Hold-Up and Service Request Devices

Honeywell offers a wide variety of hold-up buttons and equipment to support various service request strategies.

HOLD-UP AND SERVICE REQUEST DEVICES

269R

**Description:**

Hold-up switch with stainless steel cover

Product advantages:

- Switch type: Plunger type DPDT
- Switch action: Selectable latching or momentary
- Switch rating: 0.2A at 30VDC maximum
- Connections: four position 45° screw terminal block for each output side with EOL resistor splicing terminals
- Operating temp: 14° F to 140° F (-10° C to 60° C)

Product dimensions:

3.5" L x 2" W x 1.25" D

Listings:

UL/cUL Listed to UL634, UL636

269SN

**Description:**

V-Plex hold-up switch with stainless steel cover "polling loop only"

Product advantages:

- Switch action: Selectable latching or momentary
- Connections: two position 45° screw terminal block for each output side
- Operating temp: 14° F to 140° F (-10° C to 60° C)

Product dimensions:

3.25" L x 2" W x 1.25" D

Listings:

UL/cUL Listed to UL634, UL636, CAN/ULC-C634

270R

**Description:**

Hardwired hold-up switch in plastic case

Product advantages:

- Switch type: Plunger type DPDT
- Switch action: Selectable latching or momentary
- Switch rating: 0.2A at 30VDC maximum
- Connections: four position 45° screw terminal block for each output side with EOL resistor splicing terminals
- Operating temp: 14° F to 140° F (-10° C to 60° C)

Product dimensions:

3.5" L x 2" W x 1.25" D

Listings:

UL Listed to UL634, UL636, CAN/ULC-C634

264

**Description:**

Money clip

Product advantages:

- Designed for installation in cash registers, cash boxes and at tellers' windows
- When activated, sends an immediate signal to either the police or central office
- Single pole double-throw contacts
- Recessed screws provided for easy mounting

Listings:

UL Listed to UL636

HOLD-UP AND SERVICE REQUEST DEVICES

266

Description:
Foot Rail

Product advantages:

- Reliable easy to operate foot activated hold-up device
- Housing made from rugged cast aluminum
- Designed to minimize the possibility of false alarms while permitting unobtrusive operation
- Indicator flag locks when alarm is tripped
- Switch rating: .5A at 30VAC/DC maximum

Product dimensions:
18" L x 3.5" D x 4" H

Listings:
UL Listed to UL634

5869

Description:

Wireless hold-up switch in white plastic case

Product advantages:

- Ideal for open or semi-enclosed commercial locations of all sizes
- Wireless connection allows location anywhere within 200 feet of 5800 series receivers or repeaters
- Ultra quiet switch for silent operation during crisis
- Tampered cover and base protects against unauthorized product removal
- Keyed reset for verification of activation

Power:

3V lithium battery such as ADEMCO 466, Duracell DL123A, Panasonic CR123A, Sanyo CR 123A, Varta CR123A or equivalent

Product dimensions:
5.938" H x 1.938" W x 1.188" D

Listings:
UL/cUL Listed to UL636, UL1641, CAN/ULC-C634, CAN/ULC-C1023, CSA-C22.2 No.205

5802MN

Description:

Wireless single-button personal panic

Product advantages:

- Sleek design, fully supervised portable panic
- Single button action
- Use as a pendant or belt clip (belt clip included)
- Includes user-changeable lithium battery

Product dimensions:
2.5" H x 1.5" W

5802MN2

Description:

Wireless dual-button personal panic

Product advantages:

- Sleek design, fully supervised portable panic
- Dual button action
- Use as a pendant or belt clip (belt clip included)
- Includes user-changeable lithium battery

Product dimensions:
3.25" H x 2" W

Access Control Solutions

Access control systems allow business owners to limit entry into selected departments based upon time, user authority and the armed state of the department's intrusion detection system.

State-of-the-art access control software integrates the most advanced security technologies with innovative networking capabilities to bring you full-featured security solutions serving any size facility. We are committed to continually developing state-of-the-art technology and providing you with total system solutions for your access control needs.

VistaKey

VISTAKEY

V-Plex Single-Door Access Control Module with Plastic Enclosure

VISTAKEY-SK

Starter Kit:

Everything you need for a one-way, single-reader door with up to 25 users. To add a reader on the inside to log as users exit, add a VISTAKEY-EXPK.

- 1-VistaKey Module
- 1-Cabinet (UL Listed)
- 1-Transformer
- 1-OP30-FWM Proximity Card Reader
- 1-PTPROX25 Proxcards (25)**
- 1-SA12040 Power Supply Board
- 1-VistaKey Two-Module Mounting Plate

VISTAKEY-EXPK

Expansion Kit:

Everything you need to add a reader inside of the door for reading out of the protected area.

- 1-VistaKey Module
- 1-OP30-FWM Proximity Reader

VISTAKEYPAC

A VistaKey Door Module kit is used when you want to select from the many other reader styles that are compatible with VistaKey.

- 1-VistaKey
- 1-Cabinet (UL Listed)
- 1-Transformer
- 1-SA12040 Power Supply Board

*Panel dependent

**Additional proxcard packs can be purchased as required

Honeywell's VistaKey Single Door Access Control System is incredibly easy to install and configure.

Designed to provide low-cost access control expansion for the popular VISTA-32FB, 128BP, 128FBP, 250BP or 250FBP integration-ready control panels, this state-of-the-art module maximizes security investments by integrating access control, intrusion detection and fire detection into one system. Installation costs are reduced by eliminating the need to install additional wiring, panels and software.

VistaKey communicates with the control panel on a standard two-wire V-Plex polling loop. Access validation time is minimized through Honeywell's patented Global Polling feature and special V-Plex protocol. Installation time is reduced through automatic enrollment and quick-start test functions. All programming can be accomplished locally by a keypad or remotely using Honeywell's Compass Downloader software. Specific system events can be reported to the central station via Honeywell's Contact ID.

- Supports 250 to 500 card holders and eight access groups*
- Supports up to two VistaKey modules per kit
- A maximum of four to 15 readers, accommodating up to 15 doors
- Wires on standard V-Plex polling loop

Dealer Benefits

- Reduces installation material and labor costs by eliminating the need to install additional control panels, software and wiring for access control
- Reduces the time required for installation through automatic module enrollment and quick-start testing
- Simplifies installation and service through tightly coupled integration, eliminating the need to program multiple databases
- One downloader programs security, fire and access control

End-User Benefits

- Maximizes security investments by integrating access control, intrusion detection, early warning fire detection and industrial process control into a single system
- Helps reduce false alarms by simplifying operation through the use of a card swipe or wireless keyfob
- Reduces operational costs by eliminating the need to re-key (due to employee turnover)
- Improves security by controlling access to specified areas in the protected premises
- Streamlines security operations by monitoring and recording user activity at a single location

Controlling Entry with VistaKey

User Benefits

- **Additional security** – VistaKey keeps unwatched doors locked and warns users if doors are left propped open
- **Helps to prevent unauthorized entry by employees or others into secure areas** – the system minimizes employee traffic, allowing entry only into areas where authorized
- **Prevent unauthorized entry outside of desired time schedules** – after hours, VistaKey can automatically reduce or increase a user's authority into normal working areas based upon predetermined schedules assigned to the individual
- **Minimize employee theft and shrinkage** – by controlling foot traffic into high-value areas, VistaKey minimizes the opportunity for theft of office products, tools and other expensive equipment.
- **Helps to minimize false system activations** – VistaKey helps to control false alarms by using an optional single-action disarming capability. If the user is authorized to enter a department that is currently armed, VistaKey can automatically disarm the system when the user presents his card. Alternatively, you can require the user to present a valid ID device and then use a keypad to disarm the system.
- **Supervisor first** – the system can be configured to allow employees to enter the building only if a supervisor or manager is present
- **Control employee overtime costs** – VistaKey can automatically lock customer entry doors at closing time. This bars the door at closing time, while allowing those who have completed their business to freely exit.
- **Automate your building to save money** – the system can switch on lights, heating and air conditioning when employees enter the facility at the beginning of the day. When the last employee leaves the building, the system can turn off lights and disable heating and air conditioning.
- **Improve employee safety** – the system can automatically lock perimeter doors in the event of a riot or other crisis. Alternatively, the system can unlock exit doors in the event of fire alarm activation.
- **Minimize locksmith charges** – because the system uses electronic keys that can be disabled individually, it saves locksmith costs related to re-keying or lock cylinder replacement
- **Eliminate distributing new keys when locks are replaced** – VistaKey replaces the need for using standard keys, so if the locksmith changes door locks, there is no need to distribute new keys to all of the employees
- **Better manage temporary employees** – the system allows administrators to assign use restrictions on visitor and temporary ID devices, which will cause the ID device to become inoperable within a specified time frame
- **Minimize security guard costs** – replace security guards at gates and lobbies. If you are using security guards to log visitors, this can be performed much more effectively using access control, cameras and intercom systems. The system allows a single guard to manage multiple entrances from a single, centralized control room.

Additional VistaKey Advantages to Consider

Honeywell's access control system is flexible and fits into most small applications. There are a number of ways to control access through doors. Because you can separate the system into many partitions or departments, the system offers a number of powerful capabilities.

- **Lock and unlock doors on a time schedule** – by establishing a separate schedule for each partition, you can limit access into departments depending upon the day of the week or time of day
- **Lock and unlock doors based upon the armed state of the intrusion detection system** – the system provides a seamless integration with intrusion detection systems and is automatically aware of the armed or disarmed state of each department. This allows you to block access into a department when it is armed.
- **System continues to operate when data cables are damaged** – each of the system's door controllers stores the IDs of the first 250 users in the access database. This allows the door to continue to operate even in the event of damaged data cabling between the main control panel and the door controller.
- **System offers single users varying authority into each department** – unlike most integrated systems, Honeywell's solution provides the unique ability to assign each user a different access authority into each department while still using a single ID card or other device
- **Automatically unlock emergency exit doors in the event of a fire or other critical event** – because the system integrates seamlessly with fire alarm and other critical condition systems, locked access doors leading to building exits can be unlocked by the system, allowing occupants to exit to safety
- **Superior door locking capabilities** – many access control systems keep the lock open for a specific time after a card read. Honeywell's anti-door bounce technology causes locking hardware to energize as soon as the door is opened, causing the door to lock immediately when closed. This minimizes the threat of unauthorized persons making entry immediately after an authorized user enters the protected department.
- **Distributed intelligence for higher security and faster response to card presentation** – because each door controller is located at the door and stores the active card user database, the system can more quickly grant access through protected doors. In addition, the overall system design costs are minimized due to Honeywell's addressable access control technology.
- **Fewer cables between main control panel and distant doors** – Honeywell's access control uses a single pair of wires to connect the door controller to the main system panel. Because of this advanced design, cables for readers, door locks, exit request devices, door position sensors and system tampers connect to a local door controller that then connects to the V-Plex bus. This reduces the amount of cable required for the system and minimizes labor required to route cable between access doors and the control panel.

VistaKey

Compatible Controls

- Three input zones, supervised or unsupervised, can be used for door status monitoring
- Request-to-Exit monitoring and cabinet monitoring (tamper)
- One open collector output trigger (sink 12mA at 12VDC)
- 512 to 1,000* access control events recorded in VISTA event log
- Programmable locally from keypad or remotely from Compass Downloader

VistaKey can be used on any commercial VISTA control platform that supports V-Plex and Honeywell's patented Global Polling feature: VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP.

Control	Maximum number of readers	Cards	Schedules
VISTA-32FB	4	250	8
VISTA-128BP	8	250	8
VISTA-128FBP	8	250	8
VISTA-250BP	15	500	8
VISTA-250FBP	15	500	8

IS310 RTE Motion Detectors

Description:

PIR motion detector for Request-to-Exit applications for door access control

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Installer-friendly – start and hold screw holes. Exclusive cable channel and aim and hold strategy makes it easier to install.
- Adjustable “tamper-proof” shutters provide precise target area near the door
- Swivel optics allow for offset mounting
- Simple, four-wire installation – minimizes installation cost and complexity
- Quiet relay switching
- Adjustable relay time (0.5-64 seconds)
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view

Recommended use:

- Use for Request-to-Exit strategy for door access control systems in commercial buildings, auditoriums, schools and industrial warehouse environments
- Ideal for lobby entrances

Mounting options:

The Request-to-Exit Motion Detector is flexible by design. You can mount the detector above the door, on the door frame or on the ceiling between 7' and 15' from the floor.

Compatibility:

- **Status output:** Dry contact
Compatible with all controls and zone input modules providing compatibility with dry contact output activation upon status change
- **Power:** 12VDC power input required

Dimensions:

2" H x 7" W x 2" D

Pattern:

- 2' x 5.5' Short range
- 8.4' x 15.8' Long range

Power:

12 – 28VAC or VDC, 50mA maximum

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Outputs:

Two form C

Options available:

- IS310WH: RTE motion, white
- IS310BL: RTE motion, black
- RTE6PKWH: Six-pack RTE motion detectors, white
- RTE6PKBL: Six-pack RTE motion detectors, black
- IS310WHTP: Trim plate, white
- IS310BLTP: Trim plate, black

Listings:

UL Listed to UL294, CSA-C22.2 No.205

IS320 RTE Motion Detectors with Piezo Sounder

Description:

PIR motion detector with piezo sounder for Request-to-Exit applications related to door access control

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Installer-friendly – start and hold screw holes. Exclusive cable channel and aim and hold strategy makes it easier to install.
- Adjustable “tamper-proof” shutters provide precise target area near the door
- Swivel optics allow for offset mounting
- Piezo Sounder with volume control
- Door contact input
- Reader/keypad/keyswitch input
- Remote arming and sounder inputs
- Cover tamper
- Simple, four-wire installation minimizes installation cost and complexity
- Quiet relay switching
- Adjustable relay time (0.5-64 seconds)
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view

Recommended use:

- Use for Request-to-Exit strategy for door access control systems in commercial buildings, auditoriums, schools and industrial warehouse environments
- Ideal for lobby entrances

Mounting options:

The Request-to-Exit motion detector is flexible by design. You can mount the detector above the door, on the door frame or on the ceiling between 7' and 15' from the floor.

Compatibility:

Status output: Dry contact
Compatible with all controls and zone input modules providing compatibility with dry contact output activation upon status change

Dimensions:

2" H x 7" W x 2" D

Pattern:

- 2' x 5.5' Short range
- 8.4' x 15.8' Long range

Power:

12 – 28VAC or VDC, 70mA maximum

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Outputs:

Two form C

Options available:

Web-based Access Control

NetAXS™

Honeywell's web-based access control offering provides solutions for installations of any size. NetAXS™ enables users to manage their system anywhere there's an Internet connection – with no dedicated PC costs. The user-friendly design makes it simple to install and easy to operate and maintain. Its superior scalability means you can purchase the exact amount of access control you need now, and add doors later as business needs change. NetAXS also integrates with Honeywell's fully-featured WIN-PAK software to enable more robust integrations.

NetAXS-123 starts at one, two or three doors – perfect for single sites and smaller facilities.

NetAXS-4 is ideal for installations starting at four doors.

Simple. Scalable. Flexible.

- Web-based system enables you to easily manage your access control anywhere with an Internet connection
- Power over Ethernet (PoE)* or built-in power supply reduce wiring requirements to save money on installation
- Modular design makes adding doors easy and affordable
- Choice of enclosures for various installations:
 - 1-door compact plastic enclosure for mounting right at the door
 - 1-door standard metal enclosure for traditional mounting
 - 4-door standard metal enclosure
 - 4-door deluxe metal enclosure

*Compact plastic enclosure offers PoE or 12 VDC

NetAXS-123

NX1P

Description:

- 1-door, compact plastic enclosure with tamper switch
- PoE or externally powered

Enclosure dimensions:

7.75" H x 7.75" W x 2.75" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Listings:

- UL Listed to UL294 pending
- CE and FCC compliant

NX1MPS

Description:

- 1-door, standard metal enclosure with tamper switch and terminal block
- Includes 4 A, 12 VDC output/100-240 VAC input power supply and 12V, 7 AH battery

Enclosure dimensions:

13.9" H x 11.9" W x 4.7" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Listings:

- UL Listed to UL294 pending
- CE and FCC compliant

NXD1

Description:

- 1-door add-on board
- Adds 1 door to your existing 1-door system = 2 doors

NX1P10

Description:

- 1-door, compact plastic enclosure with tamper switch
- PoE or externally powered
- (1) OmniProx mini-mullion reader

Enclosure dimensions:

7.75" H x 7.75" W x 2.75" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Listings:

- UL Listed to UL294 pending
- CE and FCC compliant

NX1MPS10

Description:

- 1-door, standard metal enclosure with tamper switch and terminal block
- Includes 4 A, 12 VDC output/100-240 VAC input power supply and 12V, 7 AH battery
- (1) OmniProx mini-mullion reader

Enclosure dimensions:

13.9" H x 11.9" W x 4.7" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

23.9" H x 17.7" W x 4" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Listings:

- UL Listed to UL294
- CE and FCC compliant

NX4OP40L

Description:

- 4-door, deluxe metal enclosure
- Includes (4) OP40HONR OmniProx Readers

Enclosure dimensions:

23.9" H x 17.7" W x 4" D

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Listings:

- UL Listed to UL294
- FCC compliant

Integrated Solutions WIN-PAK® Software

WIN-PAK® provides a single user interface that integrates access control with video and intrusion to create a more robust platform with increased functionality. Functions that have traditionally been tied together through physical relays and input devices are now controlled logically. This simplicity gives users greater control over their systems than they had using multiple software platforms and interfaces.

- Integrate access control, digital video and intrusion integration
- Manage cardholders through multiple locations
- Available as single or five concurrent operator workstations
- Quick start setup and configuration wizards
- Real-time alarm/event monitoring

PRO2200 Professional Series Access Control Panel

The PRO2200 is an advanced access control panel capable of providing solutions where installation space is at a premium. Designed to fit in tight spaces, it provides high-density installations for up to 16 doors in under two square feet of space. The rack-mount design makes it ideal for applications where eight or more doors are needed.

- Expandable door modules offer incremental protection for two doors at a time
- Easily grow the system as needs change
- Supports multiple reader and card formats

PRO22E1IC

Description:

- Intelligent Controller Kit* RS485 Communication
- Includes (1) PRO22IC, (1) PRO22DCC, (1) PRO22E1PS, (1) PRO22BAT1, (1) PRO22ENC1

Enclosure dimensions:

13.9" H x 17" W x 9" D
(35.3 cm H x 43.2 cm W x 22.9 cm D)

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Humidity:

0 to 85% RHNC

Listings:

- UL Listed to UL294
- CE and FCC compliant

PRO22E1EN

Description:

- Intelligent Controller Kit* TCP/IP Communication
- Includes (1) PRO22IC, (1) PRO22EN, (1) PRO22DCC, (1) PRO22E1PS, (1) PRO22BAT1, (1) PRO22ENC1

Enclosure dimensions:

13.9" H x 17" W x 9" D
(35.3 cm H x 43.2 cm W x 22.9 cm D)

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Humidity:

0 to 85% RHNC

Listings:

- UL Listed to UL294
- CE and FCC compliant

*Software not included; order WPSE

PRO2200 Professional Series Access Control Panel

PRO22E1D2

Description:

- 2-Door TCP/IP Kit*
- Includes (1) PRO22IC, (1) PRO22EN, (1) PRO22DCC, (1) PRO22E1PS, (1) PRO22BAT1, (1) PRO22ENC1, (1) PRO22R2, (2) S4

Enclosure dimensions:

13.9" H x 17" W x 9" D
(35.3 cm H x 43.2 cm W x 22.9 cm D)

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating
- -67° F to 185° F (-55° C to +85° C) Storage

Humidity:

0 to 85% RHNC

Listings:

- UL Listed to UL294
- CE and FCC compliant

PRO22E1D4

Description:

- 4-Door TCP/IP Kit*
- Includes (1) PRO22IC, (1) PRO22EN, (1) PRO22DCC, (1) PRO22E1PS, (1) PRO22BAT1, (1) PRO22ENC1, (2) PRO22R2, (4) S4

Enclosure dimensions:

13.9" H x 17" W x 9" D
(35.3 cm H x 43.2 cm W x 22.9 cm D)

Temperature ratings:

- 32° F to 120° F (0° C to 49° C) Operating

The PRO22SKD8 Kit comes with WIN-PAK SE software!

Managed Access Control WIN-PAK® CS 4.1 Software

Honeywell's WIN-PAK® CS access control product provides a cost effective and easy-to-manage security solution for businesses, while providing security dealers with multiple recurring revenue streams. WIN-PAK CS is a departure from traditional access control systems by removing the hassle of installing software, training employees, managing operating systems, computer compatibility problems and dealing with virus protection. The total cost of ownership is reduced to a manageable service fee, which results in a higher closing rate and more recurring revenue.

Managed access is ideal for professional services companies, commercial offices, property managers, industrial, manufacturing and warehousing, but can be applied to almost any type of customer that wants to save on management costs.

- Remote access control management helps win new business and creates RMR
- Customized reporting capabilities make it easy create and schedule detailed reports
- User web interface allows customers to access their system anywhere with an Internet connection
 - Live door control including remote locking and unlocking
 - Create access control alarm and event reports
 - Full user control allows customers to add or remove users instantly
- Photo-ID badging management offers increased recurring revenue opportunities and increased customer value

Managed Access Control Playbook

How Honeywell Can Help You Be Successful

From tools and resources to help you launch managed access services, to sales and marketing support, we teach you how to sell managed access and build and maintain RMR. Honeywell's Managed Access Control Playbook covers:

- Step 1: What is managed access
- Step 2: How to implement
- Step 3: How to sell

Contact your Honeywell RSM to get one today.

Visit honeywellaccess.com/mac/ for more information about Managed Access Control.

Access Control Cards, Readers and Accessories

Honeywell offers a comprehensive selection of readers, cards and accessories. From basic badging components to cards or key tags, you can find the exact products to personalize an access control system to fit your needs.

Video Applications

Making the proper selection for the integrated camera system is essential for usable images and clips. Consider the viewed area's lighting arrangement. To capture a usable image, background lighting must not overcome the forward lighting of the person or item that you want to capture. Furthermore, consider the distance between the camera and what you are trying to see. Positioning the camera too far from the subject can cause the camera to render an image of a subject that is too small. Positioning the camera too close may provide a clear image, but the movements of the responsible persons may occur outside of the close field of view and may never be recorded.

You can also use the video system as a deterrent to a crime by locating cameras in plain sight over registers, near exit doors and at rear entrances.

Honeywell offers many integrated video options that are a perfect match for a wide variety of facilities and protected locations. This section describes applications for remote look-in, local viewing and alarm verification strategies.

Total Connect Video Solutions

Honeywell's Total Connect Video Services combine cost-effective, easy-to-install cameras with a comprehensive, customer-focused communications service.

Wired/Wireless IP Cameras are easy to install and feature a compact, portable design—allowing consumers to move them whenever they choose. A pan/tilt version is also available.

Honeywell's WAP (Wireless Access Point) provides secure, wireless networking ability (Wi-Fi) in iPCAM installations. It connects easily to a port on a router and is configured with iPCAMs using Wi-Fi Protected Setup (WPS).

Total Connect Remote Video Services, part of Honeywell's suite of Total Connect digital communications services, lets you view activity around the interior or exterior of your business on PCs or mobile devices over a highly secure Internet connection.

iPCAM-WI

Description:

Wired/Wireless IP camera

Product features:

- Image sensor – CMOS 1/6" VGA resolution
- Lens – F2.8 fixed focus
- LED indicators – power and network status
- Privacy button – used to enable or disable viewing
- Wired/wireless Internet connectivity – RJ-45 Ethernet connector or wireless connector or wireless using Wi-Fi technology
- Wi-Fi capable – 802.11g
- Encryption – push button WPS (Wi-Fi Protected Setup) providing secure wireless communication
- Video Compression – MPEG-4 and M-JPEG streaming up to 30 FPS
- Video resolution – 640 x 480, 320 x 240
- Adobe® Flash® upgradeable firmware allows firmware updates over the Internet
- Screw mount base
- Total Connect Ready* – remote service required for viewing

Product dimensions:

3.8" H x 3.5" W x 1.4" D

Product weight:

0.93 lb. (422g) with stand

Operating temperature:

23° F to 122° F (-5° C to 50° C)

Power:

5V/1A

Included items:

Power supply

Listings:

- FCC
- CE

*Subscription service required.

Adobe® Flash player and QuickTime® are registered trademarks of Adobe Systems Incorporated.

iPCAM-PT

Description:

Pan/Tilt camera

Product features:

Hardware:

- LED Indicators – Power, Active, Network
- Connector Ethernet – RJ-45, SPK, DC power, reset, external microphone
- Motion sensor – 15 ft., 100° area coverage
- Bright light LED – four white light LEDs light up to 15 ft.
- Privacy button for video enable/disable

Wireless (RC8061):

- Standard – IEEE 802.11g and 802.11b
- Encryptions – WEP 64 Bits/128 Bits, WPA/WPA2 Personal, WPS

Video:

- Image sensor – CMOS 1/4" VGA resolution
- Lens – F2.0 fixed focus, effective range: 50cm to infinity
- Compression – MPEG-4/M-JPEG dual stream
- Resolution support – 640 x 480, 320 x 240, 160 x 120
- Frame Rate – up to 30 frames per second in VGA (640 x 480)
- Image control – AWB, AGC, Sharpness, Brightness

Pan/Tilt:

- Pan range – 300° (Left 150° ~ Right 150°) + 53° view angle
- Tilt range – 120° (Up 90° ~ Down 30°) + 53° view angle

Product dimensions:

5.7" H x 3.8" W x 3.1" D

Product weight:

1.5 lbs.

Operating temperature:

23° F to 122° F (-5° C to 50° C)

Power:

Adapter 5V/2A, 100/240 VAC

Listings:

- FCC
- CE

WAP

Description:

Wireless Access Point

Product features:

- 802.11 G/N Wi-Fi protocols
- Supports Total Connect video applications
- Optimized for video streaming
- Enhanced network security
- Simple configuration using Wi-Fi Protected Setup (WPS)
- Six LEDs
- Network protocol – TCP/IP
- Network interface
 - 4 x 10/100BaseT (RJ45) LAN connection
 - 1 x RJ-45 for ADSL/Broadband modem

Product dimensions:

1.18" H x 4.92" W x 4.8" D

Operating temperature:

32° F to 104° F (0° C to 40° C)

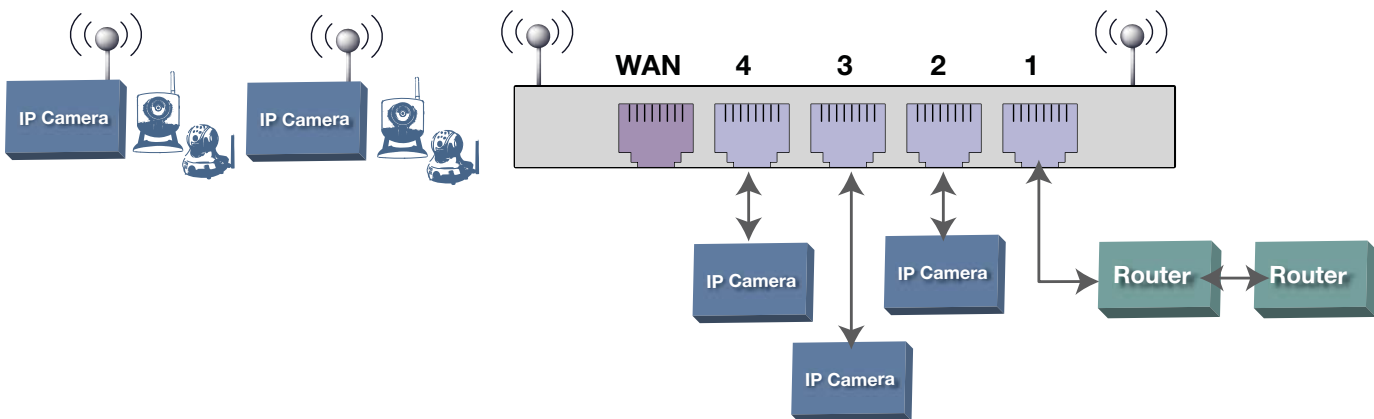

Power:

Adapter 12V DC External

Listings:

- FCC
- CE

Wired or Wireless IP Camera Setup to the WAP (Wireless Access Point)

ACU

Description:
Analog Converter Unit

Features:

General:

- Indicators – Power; Active; Network
- Connectors
 - Ethernet, RJ45 connector
 - Composite video input, BNC connector
 - Composite video output (loop out), BNC connector
 - Reset button, tack switch
- Housing structure is aluminum body and panels with wall mount kits

Hardware:

- High quality analog TV decoder supporting NTSC and PAL standard
- Provides MPEG4 Simple Profile
- LAN – 10/100 Base TX Ethernet with auto-MDIX
- PoE – 802.3af Power-Over-Ethernet
- Hardware 128-bit AES and 64-bit DES/3DES data encryption

Firmware:

- Supports motion detection by analyzing video stream
- Image controls – Auto White Balance (AWB), Auto Gain Control (AGC), Sharpness, Image Quality, Time Stamp and Text Overlay

Video:

- Compression – MPEG-4 SP; MJPEG
- Resolution – 640 x 480; 320 x 240; up to 30 FPS

Alerts:*

- Four motion detection areas with individual sensitivity
- Three E-mail address
- One HTTP notification for instant notification

Product dimensions:

1.18" H x 3.54" W x 5.5" L

Product weight:

0.77 lbs. (350g)

Operating temperature:

32° F to 104° F (0° C to 40° C)

Humidity:

10-80%

Power:

12V DC/PoE (Power Over Ethernet)

*Requires Honeywell Total Connect Remote Services

Total Connect Video Services

Features:

- Advanced graphic user interface
 - Total Connect's video viewer is an attractive, easy to use interface with customizable multiple images, sizing capability and streaming views
 - Optional pan/tilt controls for compatible cameras
- Adobe® flash player-based application
 - QuickTime® video player
- Secure communications firewall friendly video streaming
 - No router changes required, no port forwarding necessary
- Web-based camera configuration
 - Video application parameters configured via Total Connect
- Up to six cameras supported per account
 - Selectable per user multi-camera view
- Event driven video notification with adjustable video motion detection technology
- Video storage of up to 100MB of video clips

Video Surveillance

As a leader in video security with products that protect millions of homes and businesses ranging in size from entry level to enterprise, Honeywell offers an extraordinary range of video surveillance technologies for any application and for every budget.

While providing the latest in IP surveillance solutions, Honeywell continues to offer analog and hybrid equipment to meet the needs of its diverse customer base - from commercial buildings and retail stores to industrial sites and government facilities, from residential homes to mission-critical applications.

A portion of our IP products and Performance Series products are included within this section.

For more information on these products and on our complete video product portfolio, visit www.honeywellvideo.com or call 1-800-796-2288.

Video Product Portfolio At A Glance

Cameras and Domes

- IP Cameras

- Keyboards and Controllers
- Power Supplies
- Surge Protectors
- Twisted Pair Video

IP Security Solutions

Honeywell's IP portfolio allows integration of a broader offering of technology into existing analog systems—including video analytics, high definition cameras and a powerful video management platform. By integrating the latest in IP technology with traditional analog components, end users can better control operational costs and maximize existing investments in surveillance equipment.

There are several reasons to migrate to IP:

- Opens a world of possibilities like the ability to view high-quality, full-frame-rate video
- Provides cost efficiencies and the convenience of leveraging existing network infrastructure
- Maximizes your existing investment in analog components by integrating them with digital technologies
- Installs quickly and easily with auto-discovery tools
- Offers system scalability – add one camera at a time or hundreds; use a single-client workstation/server configuration or expand to multiple client workstations and servers

For more information on IP products and security solutions, call 1-800-796-2288 or visit www.honeywellsolutions.com.

IP/Network Cameras

- Superb image quality, low bandwidth and less storage requirements
- Indoor & outdoor mini-domes, box, bullet and PTZs
- 540 TVL, high definition, megapixel resolutions

Recording Engines

Whether you need to migrate from an analog system or you need an all-IP, end-to-end solution, Honeywell's recording devices are high performing yet designed for maximum storage and easy installation and operation.

- Fusion IV Hybrid DVR
- Fusion IV NVR
- IP Engine
- Enterprise System

Software

- MAXPRO® VMS
 - View video feeds from multiple cameras on a single user interface
 - Integrate video cameras, alarm systems and access control to quickly detect threats and areas of risk
- Intelligent video analytics
 - Automatically detect, analyze, track and classify behaviors of people and vehicles
- IDM (Integrated Data Manager)
 - Integrate POS data with the corresponding video
- IP Engine
- Enterprise NVR

System Components

Choose from a variety of components from Honeywell to complete your IP security solution:

- Matrix Switching Systems
- Encoders
- Decoders
- Keyboards & Controllers

HD3MDIP

Description:

Indoor mini-dome, 720p (1280 x 720), True Day/Night

Recommended use/application:

HD3MDIP is perfect for installations requiring excellent picture clarity at minimal bandwidth. At three times the resolution of standard analog cameras, this compact, one-piece design installs quickly and easily in commercial or government facilities, schools, casinos, retail stores or hospitals.

Product features:

- High definition images provide higher pixel counts which reduce pixilation of images when digital software PTZ features are implemented
- 30 fps progressive scan
- True Day/Night, 3.3-12 mm VFAI lens with removable IR cut filter
- Excellent low light performance
- Camera tamper and video motion detection
- Selectable compression formats
- Dual digital video streams simultaneously, independently configurable
- Remote firmware update
- Supports both dynamic and static IP addresses
- Single model for surface mount and recessed ceiling applications, 4S adapter plate also supplied
- Includes advanced IP locator software to make system setup easy
- Web server for remote setup of camera video and network parameters

Product dimensions:

Refer to datasheet for mounting option dimensions

Product weight:

1.0 lb. (.448 kg) camera only

Operating temperature:

14° F to 122° F (-10° C to 50° C)

Relative humidity:

0% to 85%, non-condensing

Power:

24 VAC or PoE IEEE 802.3af, Class 1

Mounts:

HD3-MK – Wall/Pendant Mount Kit

HD4MDIP

Description:

Outdoor mini-dome, 720p (1280 x 720), True Day/Night

Recommended use/application:

HD4MDIP is perfect for installations requiring excellent picture clarity at minimal bandwidth. At three times the resolution of standard analog cameras, yet with similar bandwidth requirements, this vandal-resistant, impact-resistant outdoor dome offers maximum protection against dust, dirt, and water, offering optimum performance for both outdoor and indoor applications including high-risk environments such as prisons, airports and train stations.

Product features:

- High definition images provide higher pixel counts which reduce pixilation of images when digital software PTZ features are implemented
- 30 fps progressive scan
- True Day/Night, 3.3-12 mm VFAI lens with removable IR cut filter
- Excellent low light performance
- Camera tamper and video motion detection
- Selectable compression formats
- Dual digital video streams simultaneously, independently configurable
- Remote firmware update
- Supports both dynamic and static IP addresses
- Single model for surface mount and recessed ceiling applications, 4S adapter plate also supplied
- Includes advanced IP locator software to make system setup easy
- Web server for remote setup of camera video and network parameters

Product dimensions:

Refer to datasheet for mounting option dimensions

Product weight:

3.0 lbs. (1.3 kg) camera only

Operating temperature:

-4° F to 122° F (-20° C to 50° C)

Relative humidity:

0% to 85%, non-condensing

Protection classification:

IP66

Power:

24 VAC or PoE IEEE 802.3af, Class 1

Mounts:

- HD4DIP-PK – Pendant Mount Bracket
- HD4DIP-WK – Wall Mount Bracket

HD4DIP

Description:

Outdoor mini-dome, 540 TVL, True Day/Night

Recommended use/application:

The HD4DIP is perfect for locations where variable light conditions exist. Its discreet, vandal-resistant, impact-resistant design provides maximum protection against dust, dirt and water. HD4DIP offers optimum performance for both outdoor and indoor applications including schools, hospitals, commercial sites, industrial parks, airports, retailers, gated entrances, foyers, loading docks or driveways.

Product features:

- 4CIF, 2CIF, or CIF resolutions
- 1/3" color CCD, 540 TVL
- Excellent low light performance, down to 0.1 lux
- Camera tamper detection
- MPEG-4 compression
- Remote firmware updates
- Supports both dynamic and static IP addresses
- Variable day/night threshold setting to accommodate switching to black and white images in low light
- Multiple levels of password-protected remote access prevents unauthorized users from altering settings
- Includes advanced IP locator software to make system setup easy
- Web server for remote setup of camera video and network parameters

Product dimensions:

Refer to datasheet for mounting option dimensions

Product weight:

3.0 lbs. (1.3 kg) camera only

Operating temperature:

-4° F to 122° F (-20° C to 50° C)

Relative humidity:

0% to 85%, non-condensing

Protection classification:

IP66

Power:

24 VAC or PoE IEEE 802.3af, Class 1

Mounts:

- HD4DIP-PK – Pendant Mount Bracket
- HD4DIP-WK – Wall Mount Bracket

ACUIX™ IP

Description:

High-speed Pan/Tilt/Zoom Dome System

Recommended use/application:

The combination of the latest in digital technology, advanced video processing and aesthetically pleasing design makes the ACUIX IP ideally suited for large retailers, airports, government installations, schools and campuses, industrial environments and anywhere detailed surveillance is essential.

Product features:

- Housings: In-ceiling, indoor, outdoor, rugged
- Cameras: 35X, 26X, 18X, 18X Color
- Lens: 35X, 26X, 18X optical zoom
- Wide Dynamic (128X) on 35X, 26X, 18X
- True Day/Night on 35X, 26X, 18X
- Electronic Image Stabilization on 35X
- MPEG-4 compression
- 4CIF, 2CIF, and CIF resolutions
- Up to 30 fps
- Camera tamper detection
- Backup of all camera settings
- Up to 150 user-defined presets
- 16 preset tours of 64 presets each
- Built-in surge and lightning protection

Product dimensions and weights:

Refer to datasheet for mounting option dimensions

Operating temperature:

- In-ceiling and indoor: 14° F to 131° F (-10° C to 55° C)
- Outdoor and rugged: -40° F to 131° F (-40° C to 55° C)

Relative humidity:

0 to 95%, non-condensing

Protection classification:

IP66, NEMA4X

Input consumption:

24 VAC @ 50/60 Hz, Class 2 LPS

Indoor mounts:

- HDCM1 – Ceiling Mount
- HDVWM1 – Wall Mount

Indoor/outdoor mounts:

- HDXWM2 – Wall Mount
- HDPRM2 – Parapet and Flat Roof Mount

Adapters (for HDXWM2):

- HDXPMA1 – Pole Mount Adapter
- HDXCMA1 – Corner Mount Adapter

HCX Series

Description:

Indoor or outdoor box cameras, megapixel

Recommended use/application:

The HCX Series provides optimum performance for both indoor and outdoor applications requiring higher resolution over a larger field of view than is available from a high resolution analog camera. Retail and banking industries greatly benefit from using megapixel cameras. When properly positioned, both the full transaction as well as a person's identifying features can be zoomed in to analyze transactions or identify fraud. Other applications include multi-lane driveways, wide lobbies, gated entrances and loading docks.

Product features:

- 5 megapixel, True Day/Night (HCX5DW2)
- 3.1 megapixel color (HCX3W)
- 1.3 megapixel color (HCX13MW)
- 1/2" progressive scan imager on 5, 3.1 MP, 1/3" progressive scan imager on 1.3 MP
- Up to 2560 X 1920 pixel resolution
- Excellent low light performance
- Vari-focal Manual Iris lens (F1.8, 4.5-13 mm) on 5 MP
- Vari-focal Manual Iris lens (F1.8, 4-10 mm) on 3.1, 1.3 MP
- Full time analog video output
- MJPEG compression
- Multi-zone motion detection
- E-mail notification of alarms or motion events

Product dimensions:

Refer to datasheet for mounting option dimensions

Product weight:

- HCX5DW2, HCX3W: 0.8 lb. (0.36 kg) camera only
- HCX13MW: 0.4 lb. (0.16 kg) camera only

Operating temperature:

32° F to 104° F (0° C to 40° C)

Relative humidity:

0% to 85%, non-condensing

Power:

12 VDC/24 VAC or PoE 802.3af

Indoor mounts:

- HBC5WT – Wall/Ceiling Mount, White
- HBC5BK – Wall/Ceiling Mount, Black

Environmental housings:

HHC12 Series - Environmental housings

Indoor/outdoor mounts:

- HHMW13 – Wall Mount
- HHMC21J – Ceiling "J" Mount

HCD554IP

Description:

Indoor or outdoor box camera, 540 TVL, True Day/Night

Recommended use/application:

HCD554IP is perfect for locations where variable and low light conditions exist. It is well-suited for indoor applications in retail, financial, and other commercial markets. Combined with the HHC12 environmental housing, it can be used as a solution for outdoor applications such as parking lots, building entrance ways and driveways.

Product features:

- 4CIF, 2CIF, or CIF resolutions
- 1/3" color CCD, 540 TVL
- Excellent low light performance, down to 0.4 lux
- Camera tamper detection
- MPEG-4 compression
- Remote firmware updates
- Supports both dynamic and static IP addresses
- Variable day/night threshold setting to accommodate switching to black and white images in low light
- Multiple levels of password-protected remote access prevents unauthorized users from altering system settings
- Includes advanced IP locator software to make system setup easy
- Web server for remote setup of camera video and network parameters

Product dimensions:

Refer to datasheet for mounting option dimensions

Product weight:

1.1 lb. (.5 kg) camera only

Operating temperature:

14° F to 122° F (-10° C to 50° C)

Relative humidity:

0% to 85%, non-condensing

Power:

12 VDC/24 VAC or PoE IEEE 802.3af

Indoor mounts:

- HBC5WT – Wall/Ceiling Mount, White
- HBC5BK – Wall/Ceiling Mount, Black

Environmental housings:

HHC12 Series – Environmental housings

Indoor/outdoor mounts:

- HHMW13 – Wall Mount
- HHMC21J – Ceiling "J" Mount

Performance Series

No matter what performance you need in your video surveillance system, Honeywell's popular Performance Series has the options you're looking for. Introduced several years ago and developed with our experience and commitment to innovation, the Performance Series speaks for itself.

It's easy to meet your existing and emerging security challenges with the wide range of Performance Series products—and all are competitively priced, giving you value from a security partner you know and trust.

Digital Video Recorders

We've recently expanded our Performance Series DVR offering with options that have H.264 video compression. Available in 4, 8 or 16 channels, this line offers clear crisp video at up to 240 ips recording rates. And the H.264 DVRs feature the new HRV (Honeywell Remote-View) app so users can view video from the DVR remotely on their iPhone!

All Performance Series DVRs offer an advanced feature set at a lower price. Perfect for a wide variety of surveillance applications including small to medium-sized retail, financial, warehouse, and educational facilities, these DVRs meet all your requirements for quick and easy setup and operation. The embedded Linux operating system provides ultimate reliability for 24/7 recording. Express search helps the operator find video evidence quickly, and web browser support enables remote live view and searching video stored in the DVR from a networked PC without having to load remote access software.

HRDP

Product features:

- New iPhone app!
- 4, 8, 16 channel options
- H.264 or MPEG-4 compression
- Storage from 250 GB to 2 TB
- Up to 120, 240 or 480 ips
- Internal DVD-R/W on most models
- 2 USB ports

HRV app

Cameras

Our Performance Series offers a variety of indoor, outdoor and low light cameras that let you pick just the right one for virtually any application.

Performance Series cameras include a wide range of high-performing IR bullet cameras and mini-domes powered by 12 VDC. These cameras are armed with a 1/3" SONY Super HAD CCD image sensor that provides sharper image quality, so you see every detail when it counts. We've recently expanded the line to include a high-performing 10X PTZ that's dual powered by 24 VAC/12 VDC. This low-profile unit has a 1/4" Interline Transfer CCD image sensor that provides excellent picture quality in daytime and low light conditions.

Audio Applications

In large facilities, expanded interdepartmental voice communications and voice paging applications begin to make sense. With increased numbers of persons within a facility, clear, simple communication is the key to effective, ongoing work efficiency and successful emergency response activities. Honeywell's UVS, Universal Voice System, provides up to seven communications stations allowing building management to centralize building-wide messaging and provide enhanced, simplified communication between offices. Building occupants can use the system for:

- Speaking to one another between offices with the intercom
- Answering an incoming telephone call with speaker phone function
- Voice paging functions throughout the building
- Hearing alarms from the alarm system
- Remotely answering the doorbell
- Checking audible activity in all or selected rooms
- Combined use with Optiflex Video Surveillance (local and remote)
- Optional background music
- Receiving pages and responding to building alerts

Honeywell's VISTA system provides a wide variety of local and remote communication and surveillance options that integrate seamlessly in a reliable, integrated solution.

AUDIO APPLICATIONS

AVS

Honeywell's Audio Verification System (AVS) provides two-way communication between the monitoring station and the protected site after alarms or events are reported and provides an alarm sounder at each AVST remote station.

Product advantages:

- High-quality 87 dB two-way audio for small commercial applications
- Clear, intelligible audio at a powerful 87 dB
- Provides both two-way audio and alarm audio
- ECP keypad connection routes through the AVST remote station, minimizing labor for cabling
- Up to three remote stations

Recommended use:

- Use for small business applications where audio verification of alarms and other events is needed
- Place AVST remote station next to each keypad

Mounting options:

- Main unit board: Mount inside of the control panel's enclosure or in a separate housing
- AVST: Mount next to a system keypad or locate anywhere along the ECP Bus

Product compatibility:

Works well with VISTA-15P, VISTA-20P and VISTA-21iP control panels

Power:

- AVS Unit: 50mA idle, 110mA active plus the current drawn by the stations from inside station power terminal
- AVST Station: 50mA idle, 250mA in audio mode, 350mA in siren mode

Temperature:

14° F to 140° F (-10° C to 60° C)

Dimensions:

- Main Board: 5.5" W X 4" H X .75" D
- Mounting bracket dimensions: 6.188" W x 8.25" H x .812" D
- AVST remote station: 4.5" H x 2.96" W x 1.52" D

Included Items:

- 620-1 Connector cord
- Cable assembly
- Owner's Manual
- AVS base unit
- One AVST remote station

Listings:

- ETL/cETL Listed to UL985, UL1637, UL1023, CAN/ULC-S545, CAN/ULC-C1023
- CSFM Certification Number: 7300-1645:164

IS215TCE-MIC

Description:

- Listen-in microphone integration in motion detector
- Uses PIR passive infrared technology

Product advantages:

- Internal microphone-ready for immediate integration with UVS and other listen-in systems. UVS can connect to up to seven microphones.
- Discrete, low profile – not a distraction from style and architecture
- Simple, six-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Intelligent dual-element PIR technology evaluates size and speed of object in motion
- False alarm protection is built-in. The detector resists false alarms due to radio communication and other typical interference.

Recommended use:

- Use in lobbies, business offices, classrooms, restaurants, retail shops and similar areas
- Great for small to medium-sized rooms
- **Wide angle use:** One unit covers a space 40 feet wide x up to 40 feet long
- **Covering larger areas:** Use multiple units for monitoring larger rooms and areas

Mounting options:

- On walls, located at a height of 7' 6" to 9' from the floor
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Compatibility:

- **Status output:** Dry contact – all controls and zone input modules providing compatibility with dry contact output activation upon status change
- **Power:** 12VDC power input required.
- **Audible MIC:** Honeywell UVS and other listen-in systems

Product dimensions:

3.375" H x 2.375" W x 1.5" D

Pattern:

40' x 40' wide angle, volumetric

Power:

- 12VDC 16mA maximum
- MIC: 18mA at 12VDC

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Options available:

- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Listings:

- UL/cUL Listed to UL639, CAN/ULC-S306
- SIA PIR-01

DT7450-MIC

Description:

- Listen-in microphone integration in motion detector with DUAL TEC technology
- Uses a combination of PIR passive infrared and the revolutionary K-band microwave technology

Product advantages:

- Internal microphone ready for immediate integration with UVS and other listen-in systems. UVS can connect to up to seven microphones.
- Revolutionary K-Band technology delivers sharp detection without holes or weak spots. The custom-made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern, which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.
- Discrete, low profile – not a distraction from style and architecture
- Simple, six-wire installation – minimizes installation cost and complexity
- Optional mounting bracket to maximize aiming options while making the sensor compatible with a wide range of surface angles
- On-board LED status indicators
- Patented look-down zone
- Patented black bug guard resists bright lights and keeps bugs out of the view
- Dual-core technology keeps the detector's view clear by filtering noise caused by light fixtures, and allows the detector to dynamically adapt to a wide range of changing light and temperature conditions throughout the day
- False alarm protection is built-in. The detector resists false alarms due to radio communication and other typical interference.

Recommended use:

- Use in commercial buildings, auditoriums, schools and industrial warehouse environments
- Great for small to medium hallways and inside large warehouse loading door areas
- **Long range use:** One unit covers a space 10 feet wide x up to 50 feet long
- **Wide angle use:** One unit covers a space 50 feet wide x up to 60 feet long
- **Covering larger areas:** Use multiple units for monitoring larger rooms and areas

Mounting options:

- On walls, located at a height of 7' 6" from the floor
- Aim toward areas where motion sensing is desired
- Where required, aim across windows, but avoid aiming at windows

Compatibility:

- **Status output:** Dry contact – all controls and zone input modules providing compatibility with dry contact output activation upon status change
- **Power:** 12VDC power input required
- **Audible MIC:** Honeywell UVS and other listen-in systems

Product dimensions:

4.92" H x 2.94" W x 1.72" D

Pattern:

- 10' x 50' long-range curtain, barrier
- 50' x 60' wide angle, volumetric

Power:

12V 30mA idle to 35mA maximum

Temperature:

14° F to 131° F (-10° C to 55° C)

Humidity:

5-95% relative, non-condensing

Included items:

50' x 60' Lens

Options available:

- DT7000-LRLK: Long Range lens kit (pattern 8' x 50')
- SMB10: Universal wall-mount bracket
- SMB10T: Universal wall-mount bracket, tampered
- SMB10C: Universal ceiling-mount bracket

Sirens, Sounders and Accessories

Sirens and Sounders for Local Alarm Indications

Sounds generated by the system can be made different for various system alarms. In addition, the type of sound can help to scare away an intruder or evacuate the building during a fire.

During a burglary the siren's sound is startling, but more effectively, filling the room with sound blocks the intruder's ability to hear police sirens approaching. This lack of ability to hear into the distance raises the panic level of an intruder most likely making them want to leave. Consider outfitting the system with indoor sounders to fill the room with noise and outdoor sirens to call for the immediate attention of neighbors. Whatever your strategy, we have a number of styles and types to choose from.

AB12M

Description:

Motorized bell in box

Product advantages:

- Required on UL Grade A installation
- Extra heavy steel
- 10" underdome bell
- Two tamper switches
- Insulated inner box
- Fully tampered for protection from attempts to open, drill or chisel through cabinet

Power:

100mA at 12VDC

Product dimensions:

14.938" H x 14.938" W x 4.5" D

Mounting options/enclosure:

Enclosure included

In/Outdoor use:

Outdoor

Tamper options:

Included for cover and base

Listings:

UL/ULC Listed to UL365, UL464, UL609, CAN/ULC-S303, CAN/ULC-S525

1011BE12M

Description:

Motorized bell in box

Product advantages:

- 10" motorized bell
- Fully tampered for protection from attempts to open, drill or chisel through cabinet

Power:

100mA at 12VDC

Product dimensions:

15" H x 11" W x 4" D

Mounting options/enclosure:

Enclosure included

In/Outdoor use:

Outdoor

Tamper options:

Optional

WAVE2PD

Description:

Two-tone piezo dynamic siren

Product advantages:

- Half the weight of standard sirens
- 1/3 the current requirements of standard sirens
- Terminals eliminate soldering and splicing
- Snap-open hinged case cover for faster installation

Power:

120mA at 12VDC

Watt/dB rating:

105 dB at one meter

Product dimensions:

4.46" H x 3.25" W x 1.4" D

Mounting options/enclosure:

Surface mount

In/Outdoor use:

Indoor

Tamper options:

Optional

Option available:

WAVE2PDT: Includes tamper switches

Listings:

UL Listed to UL1641, UL985

WAVE2

Description:

Two-tone siren

Product advantages:

- Attractive patented design fits single gang wall plate
- Snap-open hinged case cover for faster installation
- Louder (106 dB) dual tone siren output
- Terminals eliminate soldering and splicing
- Corner or ceiling mounting with no additional brackets or hardware
- Channeled case back for convenient wiring access
- UL commercial burglary

Power:

500mA at 12VDC

Watt/dB rating:

106 dB at one meter

Product dimensions:

4.46" H x 3.25" W x 1.4" D

Mounting options/enclosure:

Surface mount

Listings:

UL Listed to UL1641, UL985, UL609, UL464, UL365

WAVE2F

Description:

Two-tone flush mount siren

Product advantages:

- Same performance as WAVE2
- Unique hinged case design allows for installation without disassembly
- Fits a standard double gang electric box
- Easy terminal block wire connections
- Attractive new design

Power:

500mA at 12VDC

Watt/dB rating:

- 15 watt
- 106 dB at one meter

Speaker impedance:

8 ohms

Product dimensions:

4.4" H x 4.4" W x 0.75" D

Mounting options/enclosure:

Double-gang electrical box or flush-mounted

In/Outdoor use:

Indoor

Tamper options:

N/A

Temperature:

20° F to 175° F (-7° C to 79° C)

5800WAVE

Description:

Wireless siren for use with 5800 Series wireless systems

Product advantages:

- Plug into any standard duplex receptacle
- 12 hour battery backup
- Ready to mount – no disassembly required
- Transmits status, tamper, low battery, supervisory and AC signals

Power:

- 110VAC receptacle
- Standby battery included; 205mA typical

Watt/dB rating:

- 105 dB at 3'
- 95 dB @ 3 meters

Speaker impedance:

8 ohms

Product dimensions:

4.5" H x 7.5" W x 2.25" D

Mounting options/enclosure:

Plugs into standard electrical outlet

In/Outdoor use:

Indoor

Tamper options:

Included

748

Description:
Dual-tone siren

Product advantages:

- Extremely loud (119 dB)
- Smaller – mounts directly to wall or 4" electrical box
- Dual tone output – steady and warble
- Ready to mount – no disassembly required
- Tamper proof and weather resistant
- Attractive, can be used indoors or outdoors
- Snap on trim ring conceals screws

Power:
1200mA at 12VDC

Watt/dB rating:

- 25 watt
- 119 dB at one meter

Speaker impedance:
8 ohms

Product dimensions:
4.625" H x 4.188" W x 3.75" D

Mounting options/enclosure:
Surface mount or to standard 4" electrical box

In/Outdoor use:
Outdoor

Tamper options:
Included

Option available:

743BE: Protective cabinet

719

Description:

Self-contained electronic siren

Product advantages:

- Combination speaker and siren driver
- Dual-tone – warble and steady
- 6 to 12VDC power input
- Small size – 5" diameter
- Indoor or outdoor use
- Weather resistant, high impact construction

Power:

550mA at 12VDC

Watt/dB rating:

115 dB at ten feet

Speaker impedance:

8 ohms

Product dimensions:

5" diameter

Mounting options/enclosure:

742BE enclosure

Option available:

705-820: 20 watt speaker made of durable ABS plastic

745VSD3

Description:

Trilingual Voice Siren Driver

Product advantages:

- Capable of verbally announcing burglary, fire and carbon monoxide conditions
- Can speak alarm messages in three languages – English, Spanish, French or combinations of each
- Fully configurable (interchangeable language and siren tones)
- ETL Listed (when used with a 32 ohm speaker)

Power:

- 8 ohm speaker 1400mA
- 16 ohm speaker 875mA
- 32 ohm speaker 500mA

Watt/dB rating:

- 85 dB at ten feet with 32 ohm speaker
- 108 dB max.

Speaker impedance:

8, 16, 32 ohms

Product dimensions:

4" H x 2.75" W x 1.5" D

Mounting options/enclosure:

Inside alarm control enclosure

In/Outdoor use:

Indoor

Tamper options:

Speaker supervision

Temperature:

32° F to 122° F (0° C to 50° C)

Options available:

- 745VSD3PK2: Trilingual Voice Siren Driver Kit includes 32 ohm speaker
- 746-32: 32 ohm, 15 watt indoor speaker

Listings:

ETL/cETL Listed to UL985, UL1023, CAN/ULC-S545, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-C1023

705-820

Description:
Self-contained speaker

- Product advantages:**
- Small size – 5" diameter
 - Weather resistant, high impact construction

Power:
12VDC

Watt/dB rating:
20 watt

Speaker impedance:
8 ohms

Product dimensions:
5" diameter

Mounting options/enclosure:
742BE enclosure

In/Outdoor use:
Outdoor

Tamper options:
Model 955WH with model 28-2 mounting bracket at enclosure

Temperature:
-14° F to 122° F (-26° C to 50° C)

Listings:
UL Listed to UL464

735BE

Description:
Cabinet including speaker

- Product advantages:**
- Includes 705-820, 8 ohm, 20 watt speaker
 - Tampered cabinet
 - Reduced installation time

Power:
12VDC

Watt/dB rating:
20 watt

Speaker impedance:
8 ohms

Product dimensions:
5.5" H x 6.5" W x 8.5" D

Mounting options/enclosure:
Enclosure included

In/Outdoor use:
Outdoor

Tamper options:
Tampers included

Temperature:
-14° F to 122° F (-26° C to 50° C)

- Options available:**
- 742BE: Cabinet for 5" diameter siren or speaker
 - 743BE: 10" cabinet for 702 external siren
 - For tamper provision, use the 955WH and 28-2 bracket

WAVE

Description:
Speaker

Product advantages:

- Attractive patented design fits single gang wall plate
- Snap-open hinged case cover for faster installation
- Two positions terminal block eliminates splicing and soldering
- Corner or ceiling mounting with no additional brackets or hardware
- Channeled or horizontal mounting for great versatility

Watt/dB rating:
15 watt

Speaker impedance:
8 ohms

Product dimensions:
4.25" H x 3.25" W x 2.0" D

Mounting options/enclosure:
Single-gang electrical box or flush-mounted

In/Outdoor use:
Indoor

Tamper options:
N/A

Temperature:
20° F to 175° F (-7° C to 79° C)

Listings:
UL Listed to UL464, UL609, UL365, UL864, UL985

WAVE-F

Description:
Flush mount speaker

Product advantages:

- Unique hinged case design allows for installation without disassembly
- Fits a standard double gang electric box
- Easy terminal block wire connections
- Attractive new design
- 10 watt power rating (15 watt peak)

Watt/dB rating:
15 watt

Speaker impedance:
8 ohms

Product dimensions:
4.25" H x 3.25" W x 2.0" D

Mounting options/enclosure:
Flush mount

In/Outdoor use:
Indoor

Tamper options:
Included

Temperature:
20° F to 175° F (-7° C to 79° C)

Listings:
UL Listed to UL1641, UL464, UL985

713

Description:

High power speaker

Product advantages:

- Weather resistant housing
- Ideal for indoor and outdoor applications
- Jacketed three-conductor lead included tamper loop

Watt/dB rating:

40 watt

Speaker impedance:

8 ohms

Product dimensions:

10" speaker

Mounting options/enclosure:

Surface

In/Outdoor use:

Outdoor

Temperature:

-14° F to 122° F (-26° C to 50° C)

Listings:

UL Listed to UL1641, UL464, UL985

746

Description:

Indoor speaker

Product advantages:

- Easy to mount on wall
- Double polyurethane coated voice coil – prevents corrosion
- Mounting hardware included
- Heavy duty magnet

Watt/dB rating:

15 watt (20 watt peak)

Speaker impedance:

8 ohms

Product dimensions:

4" H x 4" W x 1.65" D

Mounting options/enclosure:

Surface mount

In/Outdoor use:

Indoor

Tamper options:

N/A

Temperature:

32° F to 122° F (0° C to 50° C)

746F

Description:

Indoor flush mount speaker

Product advantages:

- Flush mount
- Double polyurethane coated voice coil – prevents corrosion
- Mounting hardware included
- Heavy duty magnet

Watt/dB rating:

15 watt (20 watt peak)

Speaker impedance:

8 ohms

Product dimensions:

5" H x 6.75" W x 1.65" D

Mounting options/enclosure:

Flush mount in 3.5" x 3.5" hole

In/Outdoor use:

Indoor

Tamper options:

N/A

Temperature:

32° F to 122° F (0° C to 50° C)

749

Description:

Speaker/Horn

Product advantages:

- Smaller – mounts directly to wall or 4" electrical box
- Ready to mount – no disassembly required
- Attractive, can be used indoors or outdoors
- Snap on trim ring conceals screws

Power:

12VDC

Watt/dB rating:

20 watt (25 watt peak)

Speaker impedance:

8 ohms

Product dimensions:

4.625" H x 4.188" W x 3.75" D

Mounting options/enclosure:

- Surface mount
- 4" standard electrical box

In/Outdoor use:

Outdoor

Tamper options:

Included

Temperature:

32° F to 122° F (0° C to 50° C)

Cords, Brackets, Power Supplies and Accessories

Honeywell offers a wide variety of devices, brackets, cords, power supplies and other items to support system customization.

TAMPER SWITCHES, BRACKETS AND PRE-WIRE PLUGS

112

Description: Plunger switch for closed circuit alarms

Listings: UL/ULC Listed to UL634, CAN/ULC-C634

28

Description: Bracket for cabinet mounting the 112 tamper switch

112 and 28 shown together

955WH

Description: Plunger switch for alarm cabinets

Listings: UL Listed to UL634

28-2

Description: Bracket for cabinet mounting the 955WH tamper switch (mounts to alarm can)

955WH and 28-2 shown together

116

Description: Plunger switch for closed circuit alarms that fits 0.75" (19mm) hole

Listings: UL/ULC Listed to UL634, CAN/ULC-C634

913WH

Description: White 0.75" pre-wire plug

Option available: 913BR: Brown

24

Description: Angled mounting bracket for 39 and 7939 style contacts

Shown with contact

914WH

Description: Steel door adapter for 3/8" recessed contacts

920

Description: L-bracket for 950 magnetic contact

29

Shown with contact

Description: Offset mounting bracket for 39 and 7939 style contacts

FOIL CONTACT SWITCHES AND DOOR CORDS

367

Description:
Foil contact

Options available:

- 367WH: White
- 367BR: Brown
- 380WH: White

Listings:

UL Listed to UL634

380

Description:
Spacer for 367

Options available:

- 380WH: White

64

Description:
Retractable slimline stretch door cord

Product advantages:

Solves the problem of carrying protective circuits off double hung-windows, sliding doors and other movable fixtures

Options available:

- 64WH: White
- 64BR: Brown
- 64GY: Gray

Listings:

UL Listed to UL634

69

Description:
Disconnecting door cord

Product advantages:

- Ideal for protecting areas such as overhead garage and roll up doors
- Can be used as a contact or as a combination contact and circuit take-off
- Contains polarized plug and special stress relief chains which protect door cord wires

Listings:

UL Listed to UL634

POWER SUPPLIES

AD12612

Description:

Auxiliary power supply/battery charger

Product advantages:

- Provides 6 or 12VDC (6 or 12V operation)
- 1.2 Amps continuous output to power devices
- Factory preset at 13.6VDC, with the jumper set to supply 12VDC
- Transformer purchased separately

Option available:

1361: Transformer for 12VDC

Listings:

- UL/ULC Listed to UL1610, UL1635, UL464, UL609, UL365, UL1637, UL1641, UL2044, UL985, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-C1023, CSA-C22.2 No.205, CAN/ULC-S545
- CSFM Certificate Number: 7300-1645:165

AD25624

Description:

Auxiliary power supply/battery charger

Product advantages:

- Provides 12 or 24VDC operation
- 2-1/2 Amps continuous output to power device
- Transformer purchased separately

Option available:

XF30: Transformer for 24VDC

Listings:

None

Fire Alarm and Life Safety Equipment

A photograph showing several firefighters in full protective gear, including helmets and oxygen tanks, working at a fire scene. They are positioned in front of a large, bright fire that is consuming a structure. The scene is illuminated by the intense orange and yellow light of the fire. The firefighters are wearing yellow and black gear, and their helmets have reflective strips. One firefighter's helmet has the number '34' on it, and another has '14'. The background is a dark, smoky environment with a large, curved metal structure visible above the fire.

Technology supporting fire alarm detection and life safety continues to advance into new detection strategies and building automation requirements. More and more, even smaller businesses are being required to provide some complex building automation functions associated with fire alarm activation. There is no match for the way Honeywell addresses the need for a wide range of fire alarm and life safety applications. This section provides information about fire alarm and life safety equipment.

Control Panels

For fire and life safety applications, Honeywell offers superior, reliable control panels for a wide variety of low-rise applications. We offer control panels for standalone fire alarm applications as well as integrated applications where fire alarm functions are to be included in an overall, combined application.

Conventional Panels

These control panels provide conventional hardwired zones at the control panel for connecting initiating devices. See [Making Connections to Control Panels](#) on page 8 for more information about connecting conventional devices to the system.

- 5110XM

Addressable Panels

These control panels support conventional, V-Plex and wireless technologies.

- VISTA-32FB
- VISTA-128FBP
- VISTA-250FBP

5110XM

The 5110XM is effective in integrated fire alarm and life safety applications such as daycare centers, restaurants, small retail shops or commercial offices. It provides up to five individual zone inputs for detection purposes.

The wide variety of sensing devices that are compatible with the 5110XM make it an ideal sensing, indicating and monitoring system for fire alarm and life safety systems.

The 5110XM provides five on-board zone inputs, so it is ideal for small commercial locations requiring water flow monitoring and fire alarm sensing.

SPECIFICATIONS

Capabilities:

Users: 6

User interfaces:

Total Keypads: 4

Zones:

- On-board Zones: 5
- On-board Relays: 1

Communication options:

On-board Dialer: dual line included, supervised

Programming options:

- Keypad
- Telephone

Power:

- Power Input: 18 VAC 40VA
- Standby Battery: 12VDC 7AH sealed lead
- Operating power: 155mA Idle, 235mA Active
- Aux Power Output: 10-14VDC at 350mA
- Bell Output: one supervised 10-14VDC at 1A

Environmental:

- Temperature: 32° F to 122° F (0° C to 50° C)
- Humidity: 85% non-condensing

Physical:

- Enclosure Dimensions: 12.5" W x 14.5" H x 3" D

VISTA-32FB

The VISTA-32FB is effective in environments such as daycare centers, restaurants, small to medium-sized retail shops or commercial offices. It provides up to 32 individual zone inputs for detection purposes.

The wide variety of sensing devices that are compatible with the VISTA-32FB make it an ideal sensing, indicating and monitoring system for fire alarm and life safety systems.

The VISTA-32 provides eight on-board zone inputs and supports up to 24 V-Plex zone expansion devices and/or up to 32 wireless sensing devices. This makes it ideal for small to medium-sized commercial locations.

The VISTA-32FB's V-Plex SLC (Signaling Line Circuit) supports zone inputs and relay outputs, allowing the system to recall elevators, release fire doors, shut down fans and perform other vital life-safety functions.

The VISTA-32FB is also available in the larger red commercial fire/burglary cabinet with external transformer. Order part number V32FB-9COM.

VISTA-128FBP

The VISTA-128FBP is perfect in environments such as warehouses, school buildings, government offices and institutional locations. It provides up to 128 individual zone inputs for detection purposes. When facility requirements include fire alarm and life safety systems, the VISTA-128FBP is an ideal fit. The VISTA-128FBP's V-Plex SLC (Signaling Line Circuit) supports zone inputs and relay outputs, allowing the system to recall elevators, release fire doors, shut down fans and perform other vital life-safety functions. For systems that also include intrusion detection, users can split the building's protection to arm and disarm up to eight separate partitions, and a common partition, so you can separate the occupied areas from unoccupied areas, or the office from public areas. For example, this allows users to arm the administration offices while the classrooms are occupied after hours, or to arm the cafeteria after the delivery staff departs, while leaving the gymnasium disarmed for public activities.

Optional remote status and control options allow building administrators to manage the system from home or other locations using an Internet browser, cell phone, PDA or other modern mobile device. The wide variety of sensing devices that are compatible with the VISTA-128FBP make it an ideal sensing, indicating and monitoring system for fire alarms, intrusion detection, access control and environmental status like temperature, water and humidity. This allows the system to extend its purposes into additional important facility status indications that assist local building management and maintenance professionals. The VISTA-128FBP provides eight on-board zone inputs and supports up to 120 V-Plex zone expansion devices and/or up to 127 wireless sensing devices.

User Interfaces

User interface products allow system users to interact, administrate and control the system.

Fire alarm status and reset capabilities allow users and responding agencies to quickly take charge of the system and see current status of the fire alarm when needed.

(Keypad shown with and without door)

6160CR-2

Commercial Fire Alpha Keypad

The 6160CR2 is an addressable remote keypad intended for use in commercial fire applications with Honeywell's control platforms. The keys are continuously backlit for convenience and easy visibility. The LCD display is backlit only when a key is depressed* or when the system is in alarm or trouble condition.

- Four programmable function keys
- Built-in sounder
- Seven status LEDs:
 - Armed (red)
 - Ready (green)
 - Power (green)
 - Fire Alarm (red)
 - Silenced (yellow)
 - Supervisory (yellow)
 - Trouble (yellow)
- Large, easy-to-read display
- Red removable door
- For use with UL864 rev. 9 panels

- ETL Listed to UL864

*Note: On some platforms, the LCD may be programmed to remain on at all times (see panel instructions for details).

ECP Isolator

Description:

The ECP Isolator is designed to isolate burglary devices from fire devices on the ECP bus, so that a trouble on the burglary side of the bus will not affect the operation of fire devices. It can also be used in any system to prevent wire shorts or grounds from interfering with operation on another wired branch on the bus.

Product advantages:

The device helps to maintain the operation of near-side isolated equipment such as fire keypads and communicators in the event of shorts or grounds on the extended ECP bus.

Recommended use:

The ECP Isolator is a requirement for commercial fire alarm systems installed as combination fire/burglary systems, or other high-security applications where isolation is required.

Mounting recommendations:

Mount inside the control panel enclosure

Compatibility:

- VISTA-32FBP
- VISTA-128FBP
- VISTA-250FBP
- FA1670C
- FA1700C

Product dimensions:

3" W x 2-3/4" H x 1" D

Power:

12VDC nominal

Temperature:

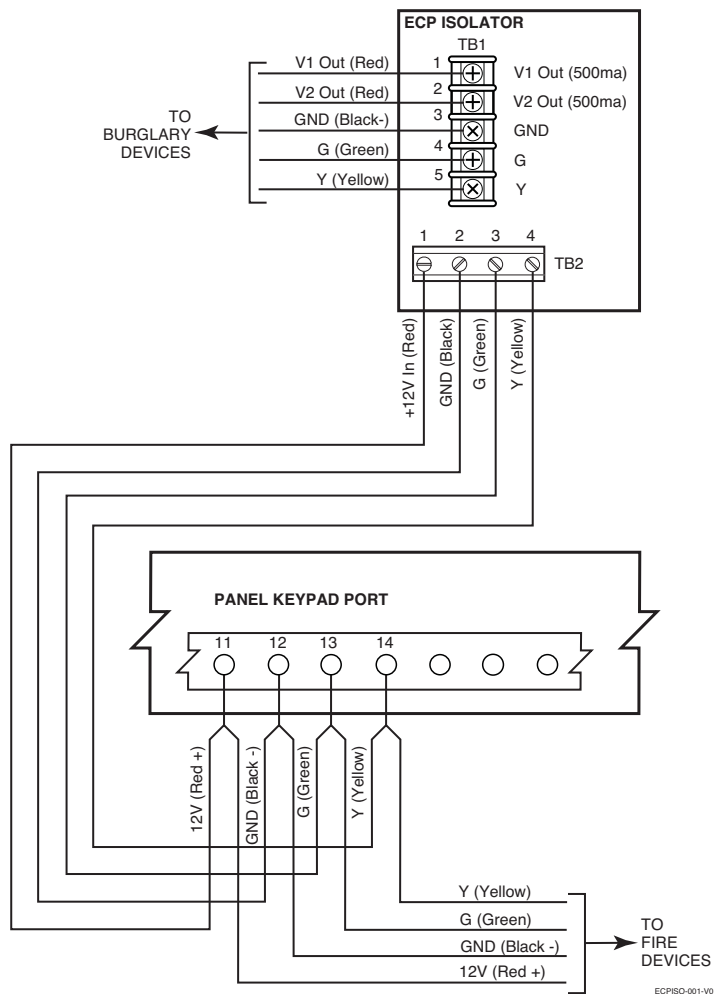

32° F to 122° F (0° C to 50° C)

Humidity:

0-86% non-condensing

Listings:

- UL Listed to UL864
- ETL Listed to UL864

ECPISO-001-V0

Fire Zone Interfaces

Hardwired Connections

Honeywell offers a variety of ways to connect a fire alarm device to the system.

4297

V-Plex SLC (Signaling Line Circuit) Extender Module

Extends the V-Plex SLC distance and provides bus isolation. (See page 58 for more information)

V-Plex-VSI

SLC (Signaling Line Circuit) Isolator Module

Provides isolation for SLC bus circuits. (See page 59 for more information)

4193SN

Zone Input Module

Provides an addressable zone input for V-Plex SLC Buses, allowing the system to recognize a conventional initiating device with dry contact output. (See page 55 for more information)

4208U

V-Plex Addressable Loop Module

(See page 57 for more information)

Fire Zone Expansion

Wireless Connections

Many jurisdictions now approve the use of listed wireless device connection strategies in the design of a fire alarm or life safety system. Our listed transmitters provide a number of important features for these critical applications:

- Transmitter provides Class B Loop with an end-of-line resistor
- Install up to two listed receivers to extend coverage for larger buildings
- Tampered cover and base alert administrators when the cover is removed or when the transmitter is removed from its mounting surface
- Repetitive alarm transmission option causes transmitters to repetitively send alarm reports until the loop is returned to normal condition
- Powerful signal transmission provides a wireless connection to receivers up to 200 feet away in a semi-enclosed building and to even farther distances in large open buildings such as warehouses and auditoriums

To make connections to the fire alarm system, we provide the following wireless products that are listed for commercial fire alarm applications:

5881ENHC

Commercial Wireless Receiver

Listed for use in commercial fire alarms and provides a wireless input to the control panel. You can connect up to two 5881ENHC receivers to the system to double system range. (See page 65 for more information)

5817CB

Commercial Wireless Transmitter

Listed for commercial fire alarm applications and provides a wireless connection for any initiating device with a dry-contact output. (See page 68 for more information)

4204CF

Description:

Supervised notification appliance module

Product advantages:

- Adds up to two Class B (style Y) supervised notification outputs to compatible VISTA panels
- Applications such as sounders and strobe lights to provide added convenience
- Easily wires to the control and fits comfortably inside the cabinet
- Has a built-in cover tamper switch to detect and report the removal of its cover to the panel

Recommended use:

Ideal for commercial fire alarm applications where additional notification circuits require activation and supervision

Mounting recommendations:

Inside of the FACP enclosure or in the NAC power supply enclosure

Compatibility:

Use with VISTA-32FB, VISTA-128FBP, VISTA-250FBP FACP Controls

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

12VDC at 25mA + 80mA per active relay

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

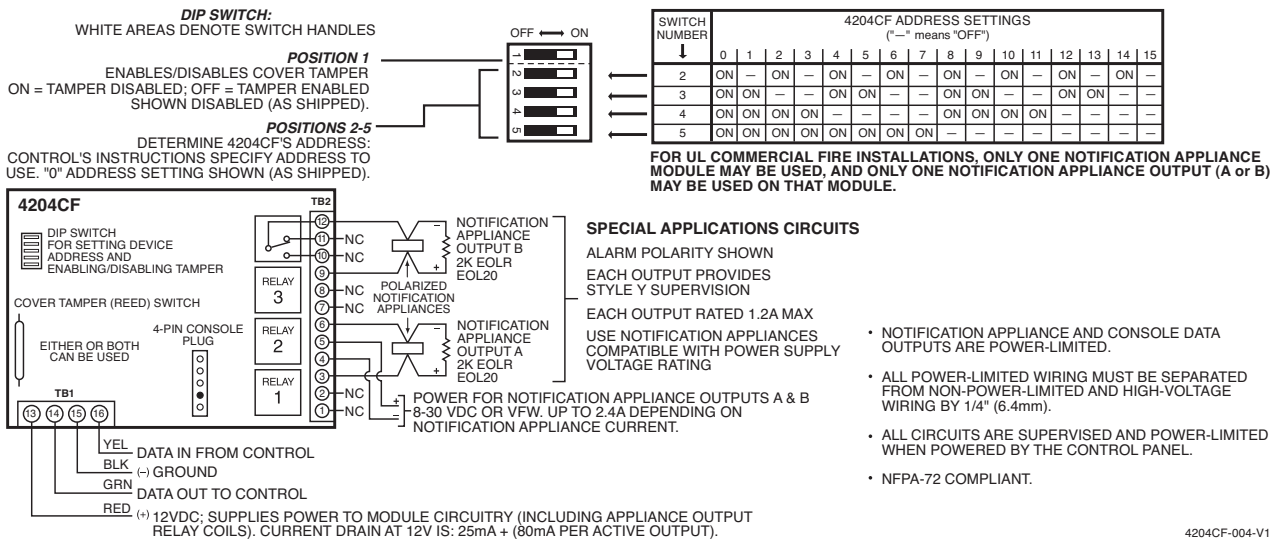

0-86% non-condensing

Included items:

Enclosure

Listings:

- UL Listed to UL864
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645:126

4204CF-004-V1

4208SNF

Description:

Addressable eight-zone expander for Honeywell V-Plex addressable systems, automatically addressed:
Two zones Class A, Six zones Class B

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Converts any conventional detection device to an addressable device. Conventional detector must provide dry-contact output
- Enclosure splice box included for easy mounting and tamper protection
- Adds up to two Class A zone inputs to a V-Plex addressable system
- Adds up to six Class B zone inputs to a V-Plex addressable system, each with 10K end-of-line resistors
- Class B Loops provide a broad, 300 ohm tolerance
- Supervised for open, shorted or normal circuit conditions
- UL Listed for commercial burglary and fire alarm applications

Recommended use:

Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system when using a centralized connection approach

Mounting recommendations:

- On a flat surface, centrally located to collect up to eight zones from nearby detectors
- Locate anywhere on the addressable V-Plex bus

Compatibility:

- All VISTA Control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Compatible with all VISTA controls as a Class A expander

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

- Supplied by the control panel's two-wire V-Plex bus: 33.6mA at 8-11VDC (0.6mA when powered externally)
- External power supply option: 33.6mA at 12VDC (all loops shorted)

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

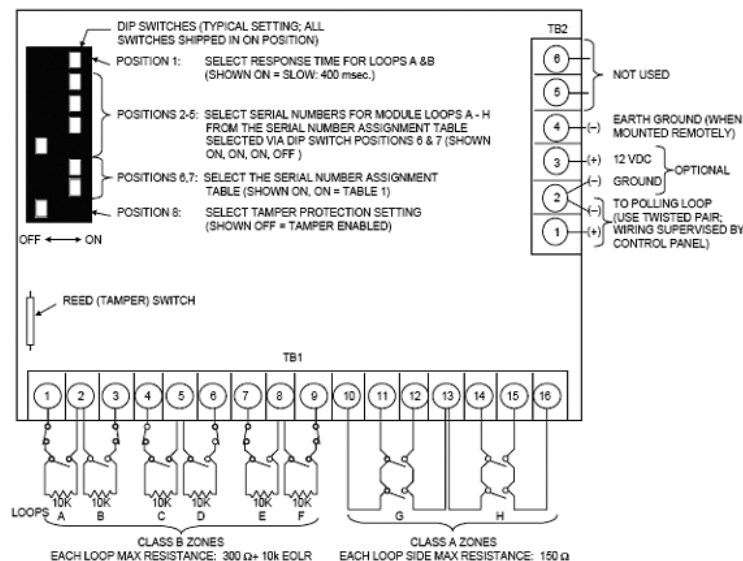

5-95% relative, non-condensing

Included items:

Six 10K end-of-line resistors

Listings:

- UL/cUL/ULC Listed to UL1610, UL1635, UL636, UL464, UL609, UL365, UL1076, UL1641, UL864, UL985, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-C1023, CAN/ULC-S545
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645:131

4209U

Description:

- Addressable Four-Zone Expander for Honeywell V-Plex addressable systems, DIP switch or addressed: Four zones Class B, powered loops for up to 16 two-wire smoke detectors
- Module concentrates zone requirements by providing from two to four system addresses for status indications to the system

Product advantages:

- Can be located anywhere along the two-wire addressable V-Plex bus
- Provides up to four zones, each supporting up to 16 compatible two-wire smoke detectors
- Converts any conventional detection device to an addressable device. Conventional detector must provide dry-contact output.
- System automatically learns device serial number
- Enclosure splice box included for easy mounting and tamper protection
- Adds up to four Class B zone inputs to a V-Plex addressable system, each with 2K end-of-line resistors
- Class B Loops provide a broad, 100 ohm tolerance
- Supervised for open, shorted or normal circuit conditions
- UL Listed for commercial burglary and fire alarm applications

Recommended use:

- Use for commercial addressable systems when deploying conventional detectors in a V-Plex addressable system when using a centralized connection approach
- Ideal for fire alarm systems using compatible two-wire smoke detectors

Mounting recommendations:

- On a flat surface, centrally located to collect up to four zones from nearby detectors
- Locate anywhere on the addressable V-Plex bus

Compatibility:

- All VISTA control panels that are compatible with V-Plex addressable technology such as VISTA-32FB, VISTA-128BP, VISTA-128FBP, VISTA-250BP and VISTA-250FBP
- Not compatible with VISTA-20P control panels

Product dimensions:

6.438" W x 4.25" H x 1.25" D

Power:

External power supply switched:
110mA at 12VDC (maximum)

Temperature:

32° F to 122° F (0° C to 50° C)

Humidity:

5-95% relative, non-condensing

Included items:

Four 2K end-of-line resistors

Listings:

- UL/cUL/ULC Listed to UL985, CAN/ULC-S545
- ETL Listed to UL864
- CSFM Certificate Number: 7300-1645:130

Fire and Life Safety Sensors

Fire Sensors

Honeywell offers wireless smoke and heat detectors with built-in transmitters. We also offer detectors that connect to the system using our addressable V-Plex technology, wireless detectors and conventional detectors with dry-contact outputs. You can use one or more of these connection methods on the same system at the same time. Here are some of our fire alarm and life safety initiating devices.

Other Sensors

Additionally, the fire alarm system can connect and monitor many other detection devices and systems such as suppression system alarm outputs like stove hood fire and water flow suppression systems. For a wide variety of other fire alarm and life safety system initiating devices and notification appliances, see System Sensor at www.systemsensor.com.

5193SD/5193SDT

Description:

- Smoke detector for VISTA V-Plex with photoelectric technology
- Optional built-in heat detector version available (5193SDT)

Product advantages:

- Low profile design
- Automatic maintenance reporting
- Simple two-wire installation
- Automatic drift compensation
- Equipped with dual LED (green and red) status indicators
- Conveniently wires to mounting base
- No special tools required for disassembly to perform required maintenance/cleaning
- Available with integral heat sensor (5193SDT)

Recommended use:

- Essential in rooms with fireplaces, gas stoves, water heaters
- Locate about 10 feet away from gas-powered appliances

Mounting recommendations:

- Space as directed by NFPA or other governing agency
- **On ceilings:** Away from air ducts, at least one foot away from the wall
- **On walls:** Away from doors and windows anywhere at the height of flight switch to six inches below the ceiling

Compatibility:

All VISTA control panels equipped with serial V-Plex addressable technology: VISTA-32FB, VISTA-128FBP, VISTA-250FBP, FA1600C, FA1660C, FA1700C

Product dimensions:

- 5.3" diameter (including base)
- 2.0" height (including base)

Power:

- 7-14VDC
- Idle:1.2mA
- Alarm LED ON: 2.8mA

Temperature:

32° F to 100° F (0° C to 37.8° C)

Humidity:

0-95% relative, non-condensing

Included items:

Universal mounting bracket

Options available:

5193SD: Smoke detector
5193SDT: Smoke with integrated heat detector

5193SD Listings:

5808W3

Description:

- Wireless photoelectric smoke/heat detector for 5800 Series Wireless systems
- Listed for commercial fire alarm applications

Product advantages:

- Capable of sensing a pre-freeze condition if temperature drops below 41° F (5° C)
- On-board Piezo sounder 85 dB at 10 feet
- Smart Check drift compensation and status
- On-board 135° F fixed spot fire detector
- UL Listed for wireless commercial fire alarm applications
- Can be located up to 200 feet from receivers and transceivers
- Tampered for removal from base
- Continual battery and tamper supervision
- Up to seven-year battery life
- Regular supervision check-in signals
- Seven-day low battery advanced warning before failure
- Repetitive alarm transmission
- Field cleanable
- Temporal sounder

Recommended use:

Use for commercial locations employing 5800 Series Wireless receivers and transceivers

Mounting recommendations:

- On walls: Locate high on wall away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of receivers and transceivers

Compatibility:

All VISTA control panels that are compatible with 5800 Series Wireless devices

Product dimensions:

2.3" H x 5.3" diameter

Range:

- Semi-enclosed buildings: 200 feet average
- Open warehouses: much greater than 200 feet

Power:

- 3V CR123A lithium batteries (included)
- Replace with Duracell DL123A, Sanyo CR123A, Panasonic CR123A or Honeywell model 466
- 2.5-3.6VDC 8.5uA Standby, 35mA Alarm

Temperature:

32° F to 100° F (0° C to 37.8° C)

Humidity:

0-95% relative, non-condensing

Included items:

3V CR123A lithium batteries

Listings:

- UL Listed to UL268
- FCC
- IC

5806W3

Description:

- Wireless photoelectric smoke detector for 5800 Series Wireless systems
- Listed for commercial fire alarm applications

Product advantages:

- Facilitates fire verification for false alarm reduction required by ANSI/SIA CP-01 standards
- On-board Piezo sounder 85 dB at 10 feet
- Smart Check drift compensation and status
- UL listed for wireless commercial fire alarm applications
- Can be located up to 200 feet from receivers and transceivers
- Tampered for removal from base
- Continual battery and tamper supervision
- Up to seven-year battery life
- Regular supervision check-in signals
- Seven-day low battery advanced warning before failure
- Repetitive alarm transmission
- Field cleanable

Recommended use:

Use for commercial locations employing 5800 Series Wireless receivers and transceivers

Mounting recommendations:

- On walls: Locate high on wall away from metallic objects and duct work
- Operates best if you can mount high so that it is in the line of sight of receivers and transceivers

5809

Description:

- Wireless rate-of-rise and 135° F fixed spot heat detector for 5800 Series Wireless systems
- Listed for commercial fire alarm applications

Product advantages:

- On-board 135° F fixed temperature spot-fire detector
- On-board rate-of-rise heat detector
- UL listed for wireless commercial fire alarm applications
- Can be located up to 200 feet from receivers and transceivers
- Continual battery and tamper supervision
- Up to five-year battery life
- Regular supervision check-in signals
- Seven-day low battery advanced warning before failure
- Tamper report if removed from base
- Repetitive alarm transmission

Recommended use:

Use for commercial locations employing 5800 Series Wireless receivers and transceivers

Mounting recommendations:

- **On walls:** Locate high on wall away from metallic objects and duct work
- Operates best if you can mount high so to be in the line of sight of receivers and transceivers

Compatibility:

All VISTA control panels that are compatible with 5800 Series Wireless devices

Product dimensions:

2.2" H x 4.4" diameter

Range:

- **Semi-enclosed buildings:** 200 feet average
- **Open warehouses:** much greater than 200 feet

Power:

- One 3V lithium battery
- Duracell DL123A, Panasonic CR123A, Sanyo CR123A, Varta CR123A
- 2.5-3.6VDC 8.5uA Standby, 35mA Alarm

Temperature:

40° F to 140° F (4.4° C to 60° C)

Humidity:

0-95% relative, non-condensing

Included items:

3V CR123A lithium batteries

Listings:

- UL/ULC Listed to UL521, CAN/ULC-S530

5800CO

Description:

Carbon Monoxide Detector for Honeywell 5800 Series Wireless systems

Product advantages:

- Get instant notification when carbon monoxide reaches unsafe levels
- Easy to install and maintain – no cables to route
- Immediate compatibility with all current Honeywell VISTA wireless systems
- Intelligently monitors levels of carbon monoxide over time and senses immediate changes in levels
- On-board sounder ANSI S3.41 temporal 4, 85 dB at 10 feet
- End-of-life timer
- Up to six-year battery life
- Test-Hush button
- Tamper protection
- Full supervision

Recommended use:

- Essential in rooms with fireplaces, gas stoves, water heaters
- Locate about 10 feet away from gas-powered appliances

Mounting recommendations:

- **On ceilings:** Away from air ducts, at least one foot away from the wall
- **On walls:** Away from doors and windows anywhere at the height of light switch to six inches below the ceiling

Compatibility:

All VISTA control panels equipped with 5800 Series Wireless receivers

Product dimensions:

2.3" H x 5.3" diameter

Power:

3V CR123A lithium battery (included)

Temperature:

32° F to 100° F (0° C to 37.8° C)

Humidity:

15-95% relative, non-condensing

5140MPS-1

Description:

- Manual Fire Alarm Box
- Single-action

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Key reset
- Glass rod included
- Surface or flush-mount to maximize installation flexibility
- Simple, two-wire installation – minimizes installation cost and complexity
- Terminal connections
- Compatible with all fire alarm control panels

Recommended use:

A perfect fit for school classrooms, administration offices, retail areas, public libraries, payment centers and other locations where the general public is invited

Mounting recommendations:

- **Semi-flush mount:** Mount on single-gang electrical box
- **Surface mount:** Use 5140-BB Back Box

Compatibility:

Status output: Dry contact – all controls and zone input modules providing compatibility with dry contact output activation upon status change

Product dimensions:

4.74" H x 3.12" W x 2.0" D

Relay contact:

1A at 125VAC, 1A at 30VDC

Included items:

Two glass rods

Option available:

- 5140MPS-BB: Back Box
- SG-GR: Package of 10 extra Glass Rods

Listings:

- MEA
- CSFM Certificate Number: 7150-1645:118
- ADA Compliant

5140MPS-2

Description:

- Manual Fire Alarm Box
- Single-action

Product advantages:

- Discrete, low profile – not a distraction from style and architecture
- Allen wrench reset
- Glass rod included
- Surface or flush-mount to maximize installation flexibility
- Simple, two-wire installation – minimizes installation cost and complexity
- Wire lead connections
- Compatible with all fire alarm control panels

Recommended use:

A perfect fit for school classrooms, administration offices, retail areas, public libraries, payment centers and other locations where the general public is invited

Mounting recommendations:

- **Semi-flush mount:** Mount on dual-gang electrical box
- **Surface mount:** Use 5140-BB Back Box

Compatibility:

Status output: Dry contact – all controls and zone input modules providing compatibility with dry contact output activation upon status change

Product dimensions:

Communications Equipment

When seconds count, our fire alarm communication products provide fast, reliable communication that is fully supervised around the clock. Honeywell offers a number of communication methods, including dialup, Internet, Enterprise Network, GSM and combined Internet and GSM products. As communication methods evolve, users need access to many connection strategies. Honeywell offers the following methods for fire alarm systems.

5140DLM

The 5140DLM is a dual phone line module that allows the system to use a second telephone line to provide status of a primary phone line. The module regularly checks the phone line for voltage and current levels, verifying a good connection to the telephone system.

Compatibility:

VISTA-32FB, VISTA-128FBP and VISTA-250FBP Fire Alarm Control Panels

Listings:

UL/ULC Listed to UL365, UL464, UL609, UL864, UL1610, UL1635, CAN/ULC-S303, CAN/ULC-S304, CAN/ULC-S525, CAN/ULC-S527

GSMCF

Description:

GSM Fire Alarm communicator, GPRS primary, SMS secondary

Product advantages:

- Flexible mounting locations allow the unit to be located for the best signal strength or for the network connection
- Can be located anywhere along the four-wire addressable ECP bus
- Dual protocol GSM uses two protocols: GPRS primary and SMS secondary
- Allows your system to connect to the monitoring station with GSM technology (GPRS and SMS) as backup communication
- Simple online addressing and configuring
- Enclosure splice box included for easy mounting and tamper protection
- Supervised for proper antenna connection and signal strength

Recommended use:

Use for all commercial fire alarm systems where high telephone line costs for dual lines are an issue, or where phone service is not available

Mounting recommendations:

On a wall next to the control panel or anywhere on the addressable ECP bus for the best signal strength

Compatibility:

- Compatible with VISTA using ECP
- Universal panel compatibility using zone mode

Product dimensions:

8.4" W x 8" H x 1.5" D

Power input:

Supplied by the control panel's four-wire ECP bus: 35mA Standby, 500mA Peak at 12VDC

Temperature:

-31° F to 158° F (-35° C to 70° C)

Humidity:

0-95% relative, non-condensing

AlarmNet product:

A service subscription is required

iGSMCF

Description:

Dual Fire Alarm communicator, Internet primary, GSM secondary

Product advantages:

- Flexible mounting locations allow the unit to be located for the best signal strength or for the network connection
- Can be located anywhere along the four-wire addressable ECP bus
- Internet and GSM communication pathways provide unsurpassed message delivery quality
- Secondary GSM uses two protocols: GPRS primary and SMS secondary
- Allows your system to connect to the monitoring station with Internet or GSM (GPRS and SMS) as multi-technology communication
- Simple online addressing and configuring
- Enclosure splice box included for easy mounting and tamper protection
- Supervised for proper antenna connection and signal strength

Recommended use:

Use for all commercial fire alarm systems where high telephone line costs for dual lines are an issue, or where phone service is not available

Mounting recommendations:

On a wall next to the control panel or anywhere on the addressable ECP bus for the best signal strength

Compatibility:

- Compatible with VISTA using ECP

Honeywell's STAR (Specification Tools and Resources)

With STAR, you're just a click away from everything you need to work on a variety of integrated projects! The quick and easy tool has been designed to save you time and make it easy to design more systems, letting you be more innovative in your approach.

Honeywell, the leader in electronic sensing, control and reporting systems, offers a number of applications for any type of facility. STAR can help any system designer create a benefit-rich, integrated system that allows facility owners to monitor alert and alarm devices locally or remotely. Users can automate building functions – providing them with additional security, more convenience and maximum cost-savings for building occupants.

WHAT WE INCLUDED

This set of design tools focuses on information that will help you to be even more successful at integrated system design. See links at the top of the page for more information.

- **System Overview:** Links to an interactive system illustration that narrates system components and links to more information about the building blocks of a system
- **Vertical Solutions:** Links you to a list of facilities that you might be designing and suggests creative applications that best fit the selected facility
- **See Applications:** Links you to a list of major applications that you can include in any facility
- **System Components:** Allows you to create your own applications and suggests applications where the element might be used
- **System Documentation:** Provides quick links to the latest versions of online documentation that you can use for submitting, including data sheets, compliance listings and specification documents
- **Battery Calculator:** Leads to an online document that determines the standby time and battery requirements that meet UL requirements for intrusion and fire alarm systems
- **CAD Drawings:** Leads to online drawings of equipment used for system design
- **System Wizard:** Installs a tool allowing you to instantly create system parts lists and custom specifications
