

VistaKey

Application Sheet

VistaKey controls and manages employee or customer access to designated or restricted area(s) in any business. A business owner can now:

- Restrict access to certain areas
- Be able to tell which employees went into what area(s) at what time
- Control access during certain times (after hours, holidays, etc.)
- Easily manage time and attendance of employees
- Receive notification if a door is left open
- Control HVAC, security and other devices by preset event/actions
- Limit access to unauthorized use of equipment or machinery in industrial applications
- Incorporate elevator access control
- Incorporate parking and driveway access control and driver tracking

Simply placing an access card near the reader will quickly and easily give access only to those specified. This card can also be used to disarm or arm the security system. There is no need to fumble with clumsy locks and keys or have employees remember multiple security codes. If a card is lost or stolen, it can be removed from the system without having to redistribute keys or change locks.

Manager Office	Nearly every business has an office where a manager keeps cash, important information, records and receipts. Due to the sensitivity of this information and the liability associated, this area should be restricted from employees and customers.
Employee/Delivery Door	To minimize the disruption of daily business, the back entrance of a business is typically used as an entrance for employees and deliveries. However, due to its concealed location, this area is at risk to entrance by unauthorized person(s).
Office Building	Items such as computers, digital projectors, monitors, video equipment, etc. are at high risk for theft or accidental damage. VistaKey can help protect the rooms where these items are stored.
Pharmacy	Pharmacies carry controlled substances which must be kept locked up and only those with proper credentials may have access to them.
Liquor Store	Many liquor stores carry vintage wines, expensive champagne and valuable aged cognacs. While an owner may want to have these items on display (glass case, separate room), they may not want to have them accessible to all customers and employees.
Medical Office	Medical offices contain expensive and potentially dangerous equipment and supplies, and sensitive personal information about patients. Keeping these items in a secure location reduces the risk of mishandling or theft.
Restaurant	Due to multiple deliveries and high turnover, food and wine storage in restaurants areas are especially vulnerable to theft and shrinkage. In addition, a cold storage area or freezer accidentally left open can ruin inventory and result in thousands of dollars in spoilage.
Convenience Store	Enhance nighttime worker safety by adding a remote door release switch for the public entry door. Control access to public restrooms. Simplify access to manager offices, liquor cabinets. Automate access to products that are regulated for sale during designated times.
Clothing Store	Limit access to cash counting rooms. Automate door locking for public entries. Limit access to employee areas. Log entry into human resources and other sensitive areas.
Manufacturing Facility	Restrict access to research and development offices, tool rooms, supply warehouses and human resources offices. Provide active certification for starting hazardous equipment.
Government Offices	Log entry into record rooms, cash counters and public lobbies.
Public Utility Storage and Staging Sites	Manage and log access to distant, unmanned storage sites.
