Conventional Pull Stations

PS-SA and PS-DA

The PS-DA and PS-SA Pull Stations are manual pull stations which provide a Fire Alarm Control Panel (FACP) with a single alarm initiating input signal. The PS-DA is a dual-action model. The PS-SA is a single-action model. Both the PS-DA and the PS-SA are equipped with key lock / reset. Both are designed to meet multiple applications with the installer and end-user in mind. Its innovative design, durable construction, and multiple mounting options make the PS-DA and PS-SA simple to install, maintain, and operate.

The single-action pull-station is activated by a single pull-down of the alarm handle. The dual-action versions require pushing in the handle, then pulling the handle down for activation. The PS-DA and PS-SA manual pull stations are UL listed and meet the ADA requirement of a 5-lbs. maximum pull force to activate. Operating instructions are molded into the handle along with Braille text. Molded terminal numbers can be found adjacent to the wiring terminals.

Models:

PS-SA– Single action with 'pigtail' connections and a key lock reset. Pigtail wires are provided for connection to the Fire Alarm Control Panel's (FACP) initiation circuit.

PS-DA – Dual action model with screw terminal connections and a key lock reset.

PS-DAH - Same as PS-DA except with **hex lock** reset.

PS-DALOB- Same as PS-DA except with "outdoor use" listing. Includes SB-I/O backbox with sealing gasket.

PS-DASP – Same as PS-DA except with both English and Spanish operating instructions.

Features:

• UL Listed
• CSFM Listed
• Meets ADA requirements
• Operating instructions are molded into the handle along with Braille text.
• Made of durable Lexan
• Available in Spanish
• Key resettable
• Easy to Install, maintain and operate
• Single or dual action
• Surface mount box available
