HOW DO CELL SIGNAL BOOSTERS WORK?

- 01 Outside antenna receives cell signal from the tower.
- 02 Booster strengthens that signal.
- 03 Inside antenna broadcasts the boosted signal for your use.

WHY YOU NEED A CELL SIGNAL BOOSTER.

Distance from towers, natural landscape, or building materials can keep strong cell signal from reaching into your home, vehicle, or business. This causes:

- Dead zones & dropped calls
- Unreliable messaging
- Slow data & buffering

Fortunately, weBoost cell signal boosters bring weak outdoor signal inside and amplify it, so everything works better. Now everyone can talk, stream, text, and browse without interruption.
