- Receives audio pages
- Up to 10 schedules and 100 events can be defined (VIP-893S)
- Simple configuration via web browser interface
- Adjustable display tilt

Send live or pre-recorded audio and text with the push of a button.

Description:

Valcom's VIP-893 Interactive Console is a touchscreen device designed to broadcast daily communications within a small to mid-size organization. The versatility of the Interactive Console makes daily announcements less taxing and more efficient for individuals who relay the information your organization needs. With one touch of a button announcements from pre-loaded audio and text files are sent to multiple endpoints including speakers, horns, desktop alerts and LED signs throughout your organization. The Interactive console doesn't take away the ability to send live voice announcements as you still have the capability to do messages on the fly as needed. One the most important aspect of the Interactive Console is how quickly you can initiate emergency alerts and relay important information to multiple departments across your organization. One push of a button sends multiple messages to multiple locations.

Technical Specifications

SPECIFICATIONS

NOMINAL POWER REQUIREMENTS
Power over Ethernet Plus (PoE+): IEEE 802.3af compliant switch or injector
