RACK ASSEMBLY

- 1) Align the (4) pre-installed mounting studs on each rackrail with mounting holes in top and bottom frames. (FIGURE A)
- 2) Loosely secure each rackrail to top and bottom frame using (2) 5/16" flange nuts per frame. (FIGURE A)

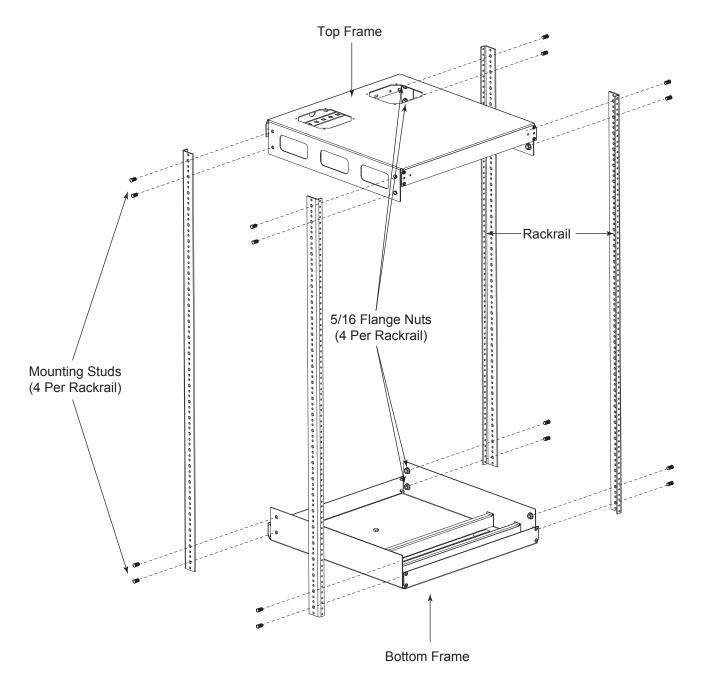

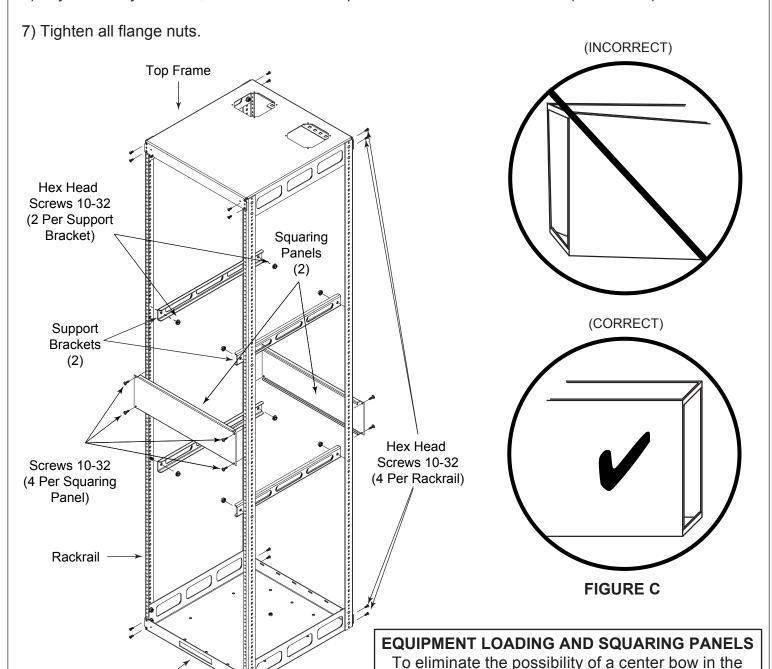

FIGURE A

RACK ASSEMBLY (Continued)

Bottom Frame

FIGURE B

- 3) Install (4) 10-32 Hex Head screws through top and bottom frames into each rackrail. (FIGURE B)
- 4) Install (2) squaring panels on front and rear of assembly using (4) 10-32 x 1/4" screws. Locate squaring panels at the mid-point of rackrail assembly. (FIGURE B)
- 5) If supplied, install (2) support brackets on pre-installed rackrail mounting studs using (2) 10-32 hex head screws per bracket. (FIGURE B)
- 6) Lay assembly on a flat, level surface and square frame on all four corners. (FIGURE C)

frame, Middle Atlantic Products suggests that the

squaring panels be left in place until some of your components have been mounted.

RACK ASSEMBLY (Continued)

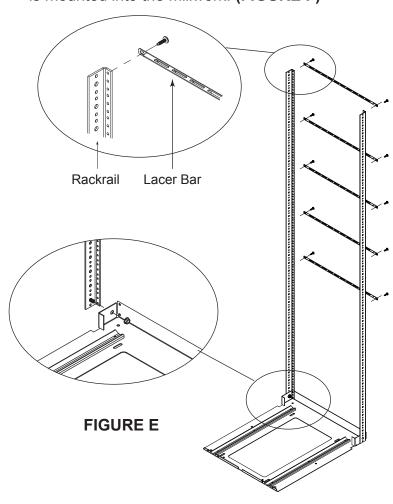

8) Install top trim panel using (2) 10-32 x 1/4" screws. (FIGURE D)

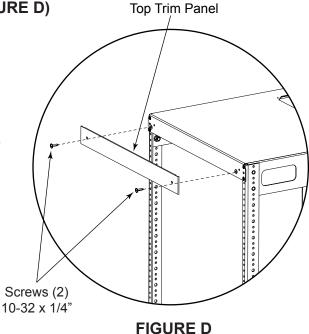

NOTE: Top trim panel contains only two screw holes.

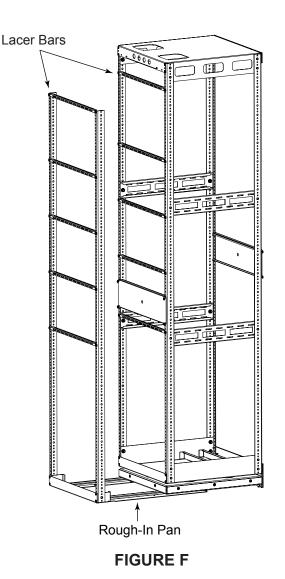

9) If equipped, align the edge of the lacer bars with the outside edge of the rackrail and ensure that the flat side of the lacer bar is on top. Install the lacer bars as shown using 10-32 Phillips head screws. (FIGURE E)

NOTE: The lacer bars should not be placed in the bottom 8 rackspaces. The lacer bars on the rack should be 2 rackspace above or below the corresponding lacer bars on the rough-in pan.

TIP: When installing the lacer bars on the rough-in pan, place the rack with the roller base on the rough-in pan and mount the equipment in the rack and position the lacer bars as needed. This will simplify cable management once the rough-in pan is mounted into the millwork. (FIGURE F)

SERVICE STAND / SERVICE TRACK ASSEMBLY

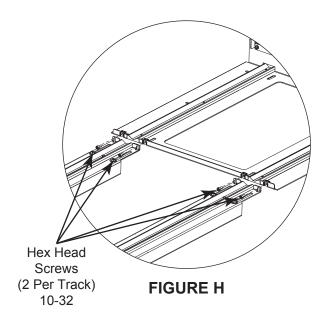

- 1) Assemble service stand as per instructions included with unit.
- 2) Adjust stand to approximate height of rough-in pan. (FIGURE G)

3) Position notched end of each service track on service stand saddles. (**FIGURE G**)

CAUTION! Be sure notched ends are fully seated in service stand saddles to prevent tracks from falling out.

- 4) Position opposite end of each service track on millwork. (FIGURE G)
- 5) Secure each service track to rough-in pan using (2) 10-32 hex head screws (included in service track hardware kit). (FIGURE H)

- 6) Fine adjust the service stand with the aid of the level installed in the service tracks.
- Extend slide supports on each service track to meet millwork using slide support screws (2 per service track). (FIGURE I)

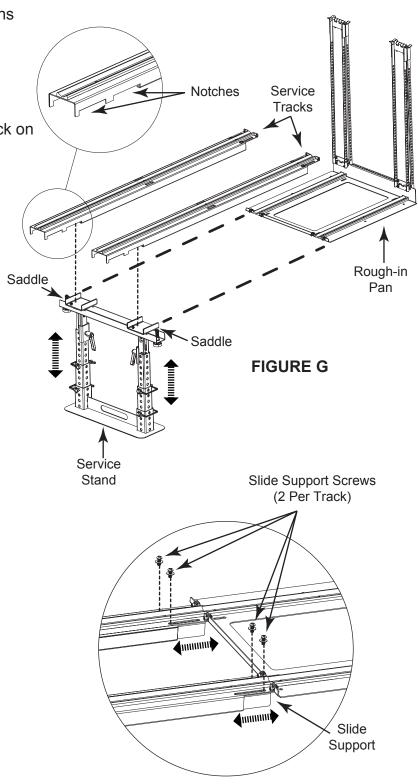

FIGURE I

NOTE: This adjustment strengthens track when extending heavy equipment for servicing.

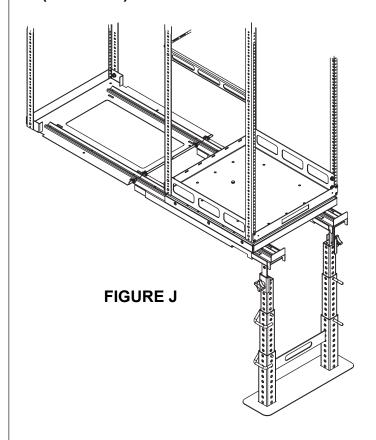

RACK INSTALLATION / CABLE MANAGEMENT

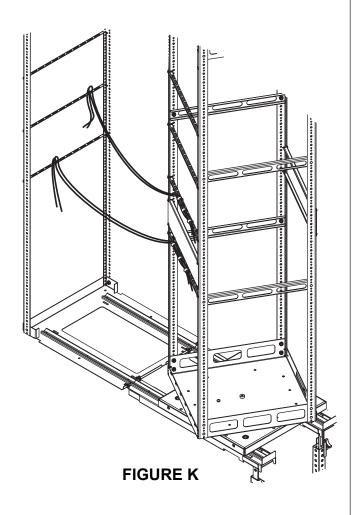

1) Place rack on service track assembly (observe proper front/rear orientation). (FIGURE J)

CAUTION! Do not allow the frame to roll off end of tracks.

NOTE: Determine which direction the rack will rotate before beginning cable management.

2) Select one side of the rack for signal cables, and the opposite side for power cables. Extend the rack and rotate 60° as shown. Lace the cables as shown, ensuring that the cables are taut. This ensures that the service loop will be the correct length and not be pinched when closing the rack. (FIGURE K)

SECURING RACK ASSEMBLY IN MILLWORK

- 1) Roll loaded rack into millwork.
- 2) Install bottom trim panel using (4) 10-32 Phillips head screws (included in hardware kit). (FIGURE L)

A

WARNING! The trim panel is integral to the safe operation of this product and is required to prevent the rack from sliding out. Failure to install trim panel can result in serious damage to equipment and/or risk of injury.

3) Remove tracks and service stand.
