

## Wireway Solutions for Indoor Applications

Easy to install, easy to modify, easy to access, and cost effective, SpecMate Type 1 Wireway Systems are ideal for all industrial, warehouse, and utility wire and cable distribution applications where dust, dirt, oil or water are not serious problems.

Installations benefit from completely open lay-in of wires and cables without pull through hassles. Future adds and changes are fast and simple. Available in a broad range of sizes, SpecMate Wireway Systems are also available in all industry standard sizes.

Separate runs of 4" x 4" [102mm x 102mm] wireway distribute communication and emergency power wiring.

### FEATURES & BENEFITS

- **Broad range of wireway sizes.** Depths from 2" to 12" [51mm to 305mm] and widths from 2" to 24" [51mm to 610mm] accommodate increased capacity requirements. Nine standard sizes are also offered.
- **Hinged covers.** Hinged covers facilitate installation in overhead applications.
- **Available with or without dividers and KOs.** Specify spacing of dividers. Standard KO spacing is 24" [610mm] on center. Dividers allow power and communication to be installed in the same wireway.
- **Reduced installation time/cost.** All UL listed and CSA certified sizes may be supported on a maximum of 5' centers. The standard 2 1/2", 4" and 6" [64mm x 64mm, 102mm x 102mm and 152mm x 152mm] sizes are UL Listed on 10 ft. [3 meter] centers.
- **Flexible system.** Custom lengths, widths, and heights easily accommodated for virtually any installation.
- **Fully accessible systems.** Simplifies installation and reduces installation time. Simply lay in the power, phone and data services and close the cover. Absolutely no pull-through necessary.
- **Available in gray baked enamel finish.** Custom colors available upon request.
- **UL Listed (File No. E137690 Guide ZOYX) and CSA Certified (File LL59760).** Ensures safety and reliability in your applications.

## SpecMate Type Wireway Systems Capacity Charts

The following charts show the wireway size and number of conductors allowed. To apply these numbers correctly to your application, observe the rules outlined below, which are taken from the applicable Electrical Code or UL/CSA standard.

### National Electrical Code (NEC):

Article 362-5 of the NEC (1999) states that "The sum of cross-sectional areas of all contained conductors at any cross section of the wireway shall not exceed 20 percent of the interior cross-sectional area of the wireway" and that "Wireways shall not contain more than thirty current carrying conductors at any cross section." An important exception to this is that "where the derating factors specified in Article 310 – 15(b)(2)(a), are applied, the number of current-carrying conductors shall not be limited, but the sum of the cross-sectional areas of all contained conductors at any cross section of the wireway shall not exceed 20 percent of the interior cross-sectional area of the wireway."

Where the conductors enter the wireway through the bottom or the sides, the maximum conductor size is limited due to the need to control the bend radius of the conductor. See the chart entitled "Conductor Size Based on Bending Space," for the maximum conductor size applicable for this situation.

Please see Article 362 of the NEC for more details if required.

### Canadian Electrical Code (CEC):

The rules in CEC 12-2104 regarding conductors in wireways are as follows:

- (1) Conductors used in wireways shall be the insulated types indicated in Table 19 (CEC) as being suitable for use in raceways.
- (2) Except as permitted in Subrule (4) wireways shall contain not more than 200 conductors and the aggregate cross-sectional area of the conductors and their insulation shall not exceed 20% of the interior cross-sectional area of the wireway.
- (3) No conductor larger than 500 kcmil (MCM) copper or 750 kcmil (MCM) aluminum shall be installed in any wireway.
- (4) Wireways containing only signal and control conductors may contain any number of conductors but the aggregate cross-sectional area of the conductors and their insulation shall not exceed 40% of the interior cross-sectional area of the wireway.
- (5) The cross-sectional area for conductors in Subrules (2) and (4) shall be determined in accordance with Rule 12-1014(4).

Please see Section 12-2100 of the CEC for more details if required.

NOTE: Letters "A", "B", "C", and "D" refer to conductor insulation types specified on page 7.

NOTE: Wireway Size and Maximum Number of Conductors Allowed. (Areas shown are 20% of the wireway's full interior cross sectional area.)

These data is valid where conductors enter the wireway only at the end of the run; when this is not the case, use the "Conductor Size Based on Bending Space" chart.
