

MAGNETIC DOOR HOLDER EXTENSION BARS 3" & 7" INSTALLATION INSTRUCTIONS

THIS PACKAGE INCLUDES

- 1 - Parts Kit
- 1 - User Manual
- 1 - Extension Bar (3" or 7")

Special Locking Arrangement Component
Electric Locking Mechanism
Access Control Accessory

DESCRIPTION

The ADI PRO Magnetic Door Holder comes with a 1" bar which, combined with the separately sold 3" and 7" extension bars, caters to a wide variety of door designs and wall distances. The extension bars can be easily affixed to the armature of the magnetic holder to increase the size of the armature, thereby bridging the gap between the armature plate and the door holder. This makes it possible to create a secure and effective magnetic alignment regardless of the distance between the armature plate and the door holder.

INSTALLATION

- 1. Check Existing Bar:** Verify that the existing 1" bar is firmly attached to the armature plate.
- 2. Identify Extension Bar**
Requirements: Measure the gap between the armature plate and the door holder. If the gap is larger than the 1" bar can accommodate, select the appropriate extension bar size (3" or 7") for your installation.
- 3. Remove Existing Bar:** If an extension bar is needed, remove the existing 1" bar from the armature plate using a hex key.
- 4. Align Extension Bar:** Position your chosen extension bar on the armature

plate so that the holes on the bar align with the mounting holes of the armature plate. Tighten the screw and hex nut to attach the extension bar to the armature plate.

- 5. Realign Armature and Holder:** Align the armature plate with the door holder, taking into account the added length of the extension bar.
- 6. Secure Connection:** Double-check all connections and mountings to confirm the extension bar is securely installed and the armature plate aligns well with the door holder.
