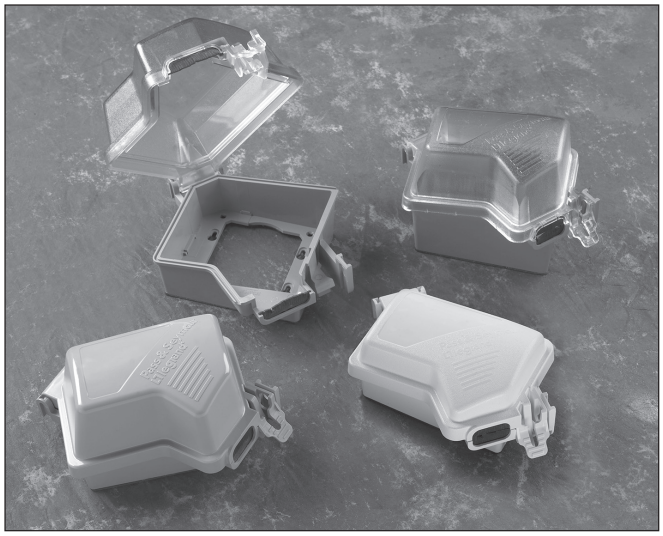
PASS & SEYMOUR®
Extra Duty While-In-Use Covers
Single, Shallow, Deep & Two Gang

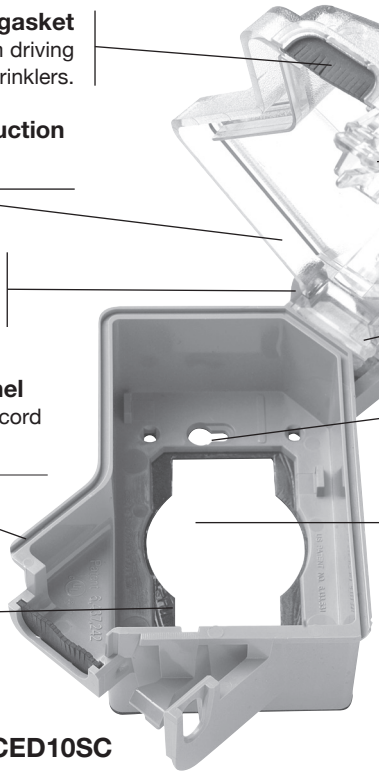
WIUCED10L, WIUCED10S, WIUCED10DL, WIUCED20L



Innovative design in addition to the latest NEC® requirements provides weather protection while-in-use.

Corner hinges allow versatile polycarbonate covers to be installed either vertically or horizontally. They provide generous interior room to accommodate bends in even the heaviest cords. They are lockable to prevent tampering, and deliver excellent weather resistance thanks to neoprene-blend gasketing, a cord flap seal and our exclusive WaterShed™ channel.

FEATURES & BENEFITS



Exclusive cord flap gasket inhibits water splash from driving rain or sprinklers.

Sturdy polycarbonate construction resists impacts and harsh weather.

Patented corner hinge and cord opening allow vertical or horizontal installation.

Exclusive WaterShed™ Channel keeps water moving outside while cord flap keeps the inside dry.

Preapplied gasket easier to install, saves time, won't get lost or damaged.

Paintable, textured finish hides scratches.

Patented trigger latch opens easily with one finger, yet is lockable to prevent tampering.

Sturdy, molded-in hinge withstands hard use.

Installs without removing electrical device, thanks to patented, **keyed mounting holes.**

Roomy interior provides space for plugs and cord bends.

Shallow profile models have 1" shorter top lid than prior models.

WIUCED10SC

The 2014 NEC® Section 406.9(B)(1) requires that an outlet box load installed for this purpose shall be listed and shall be identified as "extra duty."
