Versatile Cable for High-Resolution Streaming

Our high-bandwidth Binary™ B6 Series 4K Ultra HD HDMI® Cables support Ultra HD 4K @ 60Hz 4:4:4 and transmit 18Gbps of bandwidth for advanced video format needs. They're ready out of the box for High Dynamic Range (HDR), wide color gamut, Dolby® ATMOS, and more. Intense testing ensures swift bandwidth delivery for the most recent HDMI specification (HDMI 2.0B) and allows for streaming of high-resolution video, audio, data, and more to any type of system.

Premium HDMI Certified

HDMI's Premium Certification promises lifetime signal and quality performance. Authorized HDMI testing centers perform rigorous quality and compliance testing on EMI levels and bandwidth capability to minimize interference with wireless signals from connected devices.

Our GripTek™ Guarantee

Your cables stay in place thanks to GripTek™, Binary's exclusive gripping HDMI connector. Small bumps on the connector create a strong hold and require up to 8lbs. of pulling force to remove – that's 40% more force than a traditional HDMI connector.

Fits Into Tight Spaces

All Binary HDMI cables feature an ultra-pliable jacket for ultimate flexibility. Plus, a tight bend radius and sleek, low-profile connector helps this cable fit into the tightest of spaces.
