Cablofil® Wire Mesh Cable Tray Products with
High-Resistance Finish

#LegrandImprovingLives

HIGH-PERFORMANCE FINISHES FOR OUTDOOR INSTALLATIONS

Tough outdoor applications require products with a higher level of corrosion protection. Corrosion reduces the service life of metal cable trays, especially when they are installed in environments where exposure to saline or sulfur is common. For outdoor, industrial and solar applications, you need a high-performing finish that can withstand harsh elements for 10, 20 – even 30 years or more.

Cablofil® Wire Mesh Tray is available in industry-leading, high-performance finishes that withstand the pressure of your heaviest applications without sacrificing any benefits of an open system. When you need tough cable management, our line of tested outdoor finishes stands up to the harshest weather elements.

A LEGACY OF SUCCESS: INTRODUCING THE HIGH-RESISTANCE FINISH

For over 10 years, we have provided high-performing alternative finishes to the traditional Hot Dipped Galvanized (GC) finish, including our Geomet (DC) finish used for our Cablofil® fasteners, attachments and accessories that are often installed with traditional GC finish products. The DC finish has demonstrated an excellent performance and has proven to be an ideal alternative to GC.

Expanding on our legacy of success and as part of our final phase of transitioning away from the GC finish, we are introducing another high-performance coating to our line: the High-Resistance (HR) finish.

Like the DC finish, the HR finish also boasts a superior performance and is an excellent electrically conductive, self-lubricated and chrome-free alternative to GC. With a metallic silver appearance, the HR finish utilizes either a substrate zinc aluminum coating over the steel or a zinc substrate with an additional topcoat of outdoor-rated powder coating for extra durability.

The HR finish also features excellent wire mesh assembly and multi-tightening behavior. Performance is maintained even at elevated temperatures (up to 300°F). Salt spray resistance exceeds the performance of mechanical and many other types of galvanizing, including demonstrating a high performance for over 500 testing hours. HR finish also meets either the ASTM A1072 or ASTM D3451 standard.

Moving forward, both the HR and DC finishes will be used in conjunction. We will continue using the DC finish on hardware parts that will be used with the new HR finish applied on the cable tray. Together, they will provide years of long-lasting, dependable service for electrical equipment in tough outdoor environments.

To find Legrand products with a high-performing, corrosion-resistant finish, look for the HR & DC symbols.

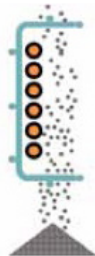

OUTDOOR-READY

LEGRAND'S HIGH-RESISTANCE FINISH IS SUPERIOR TO THE LESS SUSTAINABLE GC IN MANY WAYS:

- Eco-friendly with an environmental impact approximately four times less than Hot Dipped Galvanizing after fabrication process
- Performs better in salt spray tests
- Specified in the toughest environments (offshore wind turbines)
- Over 15 years of real-world service to back up performance claims
- Readily available with short lead times

The open structure of wire mesh cable tray is designed to resist dirt and debris, making it ideal for outdoor environments.
