Duct Smoke Delivery System + Duct Smoke Delivery Port

The DSDS and DSDP are Duct Detector accessories that facilitate a clever method for testing duct smoke detectors from an accessible location per NFPA requirements which calls for test smoke to be properly introduced into the duct's airstream. DSDS and DSDP are intended for indoor use only and use with return-side or supply-side (up to 95' and 4' respectively per UL) duct smoke detectors.

MADE IN USA SINCE 1963

UL LISTED

Features

- Ground-level test port
- Ductwork fixed port
- 1" *Carlon* Plenum-Gard rated tubing sold separately at most general supply stores

Code Reference

NFPA 72 2022—14.4.3.2(e):
In addition to the testing required in Table 14.4.3.2(17)(7)(a) and Table 14.4.3.2(17)(8), test duct smoke detectors that use sampling tubes to ensure that they will properly sample the airstream in the duct using a method acceptable to the manufacturer or in accordance with their published instructions.

With the Duct Smoke Delivery System (DSDS) you will be able to route a 1" *Carlon Plenum-Gard* or equivalent tubing (Tube sold separately at supply houses in required lengths) to a convenient location for uninhibitied access to test a duct smoke detector.

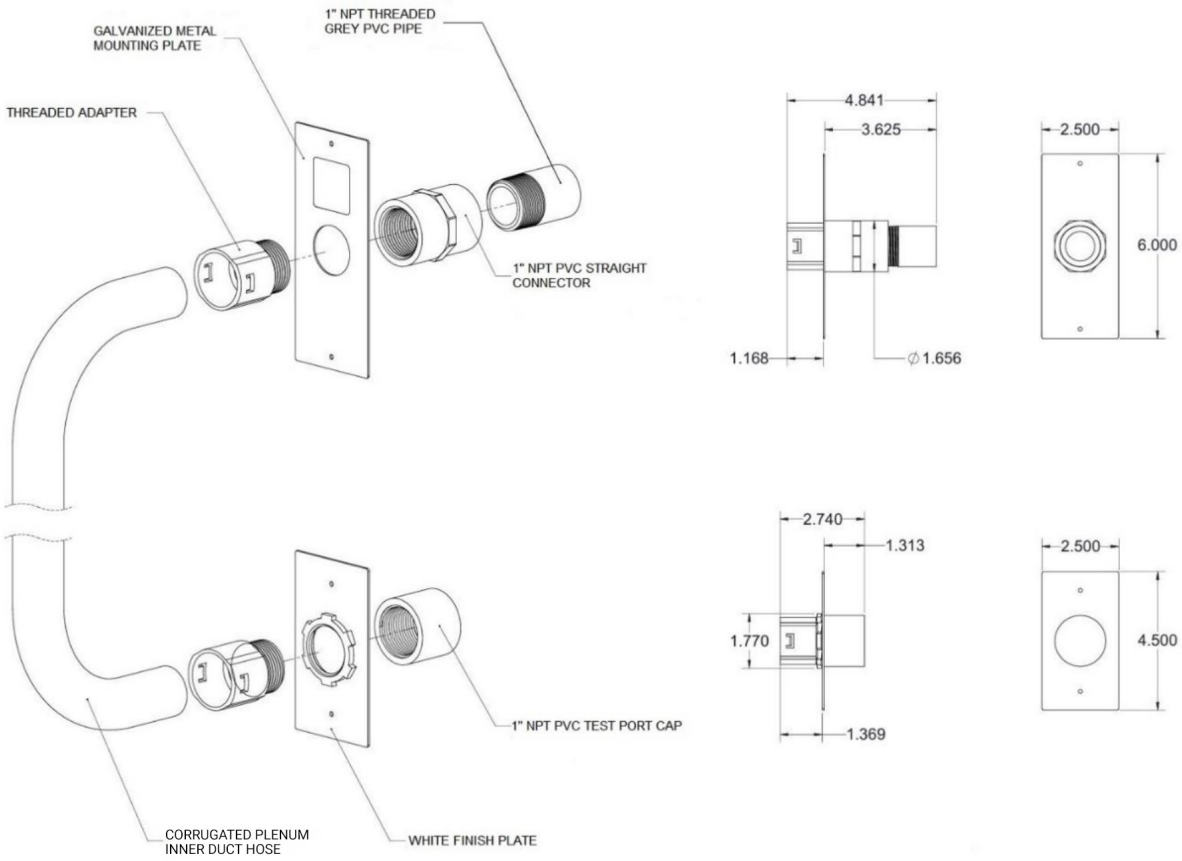

With the Duct Smoke Delivery Port (DSDP) you will be able to have fast and repeatable access to introduce test smoke directly into air duct upwind of sampling tubes without needing to cut and patch the ducting for each test.

Applications include easier, more timely testing of hard to access duct detection devices within hospitals, schools, warehouses, commercial kitchen spaces, and even other devices such as fire smoke dampers.
