

NOW AVAILABLE

Scylla AI now available through Exacq

AI-powered object and behavior detection with Scylla AI

Scylla AI is now available through **Exacq**, giving security professionals a new way to offer proactive threat identification and notification through AI-powered object and behavior detection. Available in the Exacq price book, this integration helps customers move from passive video recording to more proactive awareness and faster visibility into potential threats and incidents.

How it works:

Exacq processes video stream content to develop meaningful insights about the activity and objects.

Suspicious content is verified in real-time through the Smart Decision-Making algorithm. Information on the object, activity or identity is retrieved and forwarded to the alerting protocols in exacqVision.

Alerts are distributed in real-time to security response units through web and mobile channels with a relevant screenshot and complete information about the location and time of the incident.

Available AI licenses

Threat detection

- Gun detection
- Knife detection
- Perimeter intrusion detection
- Fight detection
- Vandalism detection
- Robbery and mask detection

Safety & incident awareness

- Smoke and fire detection
- Slip and fall detection
- Abandoned object detection

Identity & investigative intelligence

- Facial recognition
- Vehicle identification & tracking
- Suspicious shopper behavior

Best-fit environments

- Retail
- Education
- Healthcare
- Commercial buildings
- Corporate campuses
- Industrial/manufacturing
- Critical infrastructure
- Transportation/public facilities

Scylla AI now available through Exacq— what this integration offers customers

Customer challenges / How it helps

Proactive threat identification and response with AI-powered video insight.

Threat detection:

- Gun detection
- Knife detecton
- Perimeter intrusion detection
- Fight detection
- Vandalism detection
- Robbery and mask detection

Safety & incident awareness

- Smoke and fire detection
- Slip and fall detection
- Abandoned object detection

Identity & investigative intelligence:

- Facial recognition
- Vehicle identification & tracking
- Suspicious shopper behavior

Customer challenge	How Exacq + Scylla AI Can Help
Customer wants to add analytics to an existing exacqVision deployment	Run AI-powered analytics on any H.264/H.265 IP camera stream – regardless of the camera manufacturer.
Need to monitor and detect threats across a facility	Scylla offers over 15 analytics – from facial recognition and weapon detection to suspicious shopping behavior and LPR - to proactively alert staff when critical events are detected.
Multi-site threat management / high false alarm rates	Scylla supports camera streams from multiple exacqVision servers for seamless multi-site threat management and response.
Customer wants to maximize ROI for existing camera infrastructure	Add Scylla analytics to existing cameras to enable AI-powered insight, faster response times, and reduced operator fatigue.

Vertical quick view

Vertical	Relevant Capabilities
Retail	Gun detection, intrusion detection, person search, behavioral analytics
K-12 & Universities	Gun detection, intrusion detection, person search, aggression/fight detection
Healthcare	Gun detection, intrusion detection, fire/smoke detection, slip & fall detection
Industrial / critical infrastructure	Smoke & fire detection, abandoned object alerting, vehicle ID & tracking, traffic flow & heatmapping
