P&S Screwless Wall Plates bring **wall-to-wall style.**

P&S Screwless Wall Plates add a distinctive accent to any decor. Not only do they offer a wide variety of finishes; they hide the fasteners that attach them to the wall for a stylishly seamless look.

For Decorator, toggle, and duplex openings you have all the rich, handsome standard colors to choose from. And for Decorator opening plates you also have a full choice of decorative finishes like stainless steel to match appliances in the kitchen, rich woods like walnut and maple to go with furniture, floors, and cabinets. They're all here in three beautifully designed lines, all up to a four-gang. Installation is seamless, too. Simply loosen the mounting screws and click the subplate into place. This provides a tight, snug fit against the wall with no edge or channel to collect dust and dirt.

For a solution that fits perfectly with today's trends in home decorating, P&S Screwless Wall Plates are the answer.

Unbreakable, flexible polycarbonate construction — conforms to uneven drywall.

SWP26NI

clean = styling

A full range of sleek, smooth looks that hide the screws and highlight the style.

Two-piece, non-conductive polycarbonate subplate speeds installation.

Automatic alignment pins ensure wall plates fit perfectly.

Smooth perimeter eliminates channel that can catch dirt.

Premium metallic and wood finishes available in Decorator style in One- to Four-Gang Openings.

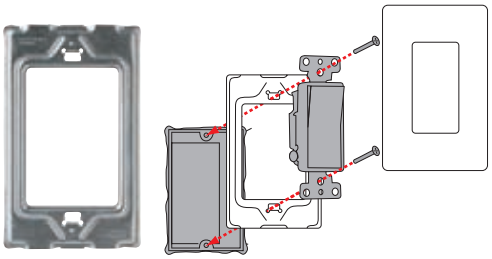

The P&S Decorator opening offers a metal subplate for commercial applications (SW26 series).

Three lines fit multiple openings
and up to four-gang configurations.

Standard Colors

White	Black	Light Almond
Ivory	Gray	Brown

P&S Screwless Wall Plate installation is this simple!

Because the subplate secures with the wiring device mounting screws, no additional fasteners are necessary — and there's no need to remove devices. Simply loosen the device mounting screws and snap the two-piece sub-base in place behind the device straps. Then retighten the screws.

The wall plate simply snaps in place over the subplate, and automatically conforms to the surface of the wall. The plate can be easily released from the subplate with a screwdriver.
