

Paxton Net2 Training

We offer practical hands-on training for our Net2 access control system. The training sessions are designed to provide the knowledge needed to install Paxton Access Net2 products and get the most from the system. This will ensure installation is always correct, reducing time taken to fix errors on site and improve your profits.

Our method of short lectures followed by practical hands-on sections allow installers as much time as required to use the products within the classroom. Training includes installation techniques and fault finding as well as useful information regarding the administration and use of the systems.

Hands-on training

The sessions are designed to provide installers with the materials to become familiar with the systems in a practical way. During the session each team will set up a multiple door system and program via laptops; all equipment is provided for use on the day.

During the training the following equipment will be provided for use in the session:

Net2 Training

The session is crucial for anyone installing Net2, whether you are a new installer of Net2, or you are a regular installer looking at keeping up with the latest developments. Net2 is our networked access control system. It can be administered using one or more PCs and can be monitored and managed from a central location. It is a complete access control solution that encompasses wireless and door entry with a range of available system integrations.

Net2 plus – networked access control

- Net2 hardware and wiring
- System design
- Power options
- Contactless access control and Long range readers
- I/O Boards

Net2 Software

- Software installation
- Practical system configuration and best practices
- Users, permissions and monitoring the system
- Reports and Operators

PaxLock and PaxLock Pro – wireless access control

- Designing and installing a wireless access control system
- Net2air bridge installation and configuration
- Net2 PaxLock Pro and US PaxLock installation and setup

Entry - IP based video door entry

- Entry system design and practical component installation
- Using Entry Configuration Utility

Net2 Pro Features

- Fire alarm integration and roll call & muster reporting
- Intruder alarm integration to prevent false alarms
- Configuring advanced features on the Net2 Pro software, including lockdown and Anti-passback
- CCTV integration
- Remotely accessing the system with Net2online

Network Guidelines

- Database management and system security guidelines
- Security settings
- Installing remote sites
