

SMARTER Video Surveillance

EXPERIENCE

Smarter Video Surveillance

Whether you need to cover a single warehouse or a national chain of storefronts, our commercial video surveillance offerings have you covered. Our intuitive app and flexible storage options let you access live or recorded video anywhere, anytime. Advanced features like 24/7 Video Health Monitoring ensure your cameras are always up and running, while intelligent analytics give valuable insight into what's going on at your business.

One Dashboard, Infinite Possibilities

For businesses with multiple locations, streamline your video surveillance with one intuitive Enterprise Dashboard. Organize multiple locations into a top-down hierarchy of groups, share footage quickly and access video anywhere, at any time, from your phone. Always know what's going on, even when you're on the go.

Video that Works Smarter

With Alarm.com for Business video solutions, you can enjoy better security with fewer false alarms.

Transform the way you protect your business with **Business Activity Analytics**. This powerful feature uses your business cameras to monitor traffic and the movement of people through your business to help you make informed decisions. Monitor multiple locations, create customizable no-go zones, and receive real-time alerts if trespassers enter prohibited areas after hours with fewer false alarms. Save time and money with video surveillance that works smarter.

No Job Too Big

Our commercial cameras get the job done in most situations; however, for larger projects that require 40+ cameras, we recommend using OpenEye.

Keep the Cameras Rolling

24/7 Video Health Monitoring ensures your cameras are always online. Automated video health reports confirm your camera views are unobstructed and keep tabs on the number of clips you're recording and storing.

Better Together

All of Alarm.com for Business's security offerings are robust on their own. Combine video with access control and intrusion detection for a security system that's more than the sum of its parts.

Recording Options

The Pro Series CSV combines the convenience of 24/7 local recording with cloud-connected accessibility, allowing you to review and export footage from anywhere. Record 4MP footage to ensure your business is covered with high-quality video that is readily available in the event of any incident.

Stop Intruders In Their Tracks

Perimeter Guard™ proactive defense uses advanced Video Analytics to sound an alert and flash camera LEDs when unwanted visitors are detected near your operation.
