

# ADI PRO Cable Express Box Technology

## Simple Technology

Wire is wound in a figure-eight configuration, then led through the payout tube.

## Excellent Results

### Tangle Free

Each layer of wire crosses over the other, so that layers are separated. This prevents tangles from forming.

### Twist Free

Wire is half-twisted in one direction, then the other, equalizing to prevent twist on payout.

### Overrun Free

Express coils do not rotate during payout, minimizing tension and inertia. Wire flows easily and payout stops when you stop pulling.

## No Tangles. No Mess. No Problem.
