

# Find the right tools for the job.

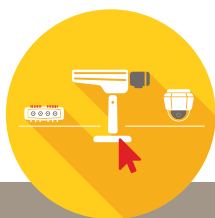

Having the right tools on hand can make a big difference to the time spent on surveillance jobs. That's why we've brought 10 Axis tools and features together in one place to help you and your customers in the design, installation, configuration and maintenance of your projects.

The Axis tool portal hosts everything you'll need to make projects run as smoothly as possible. For now, take a look below for some of Axis' most popular tools to help your customers make the most of their time on a surveillance installation.

## AXIS Site Designer

With AXIS Site Designer, you and your customers are able to pick the right cameras for any surveillance scenario. Adding accessories and picking a recording solution is quick and easy. When done designing the project, AXIS Site Designer prints a comprehensive bill of materials that includes everything your customers need to complete the installation.

## Product Selector

When designing a new system, the Axis Product Selector is a great place to start. It lets you select cameras, video encoders, and other devices from our entire portfolio and compare them at a glance. The tool is quick and easy to use.

## Accessory Selector

Brackets, housings and power supplies are important parts of any surveillance system. The Axis Accessories Selector leads you step by step through the process of selecting the right accessories for your surveillance devices and the location of their installation.

## Did you know?

Many of these tools are available and optimized for mobile use. Check them out on the go today!
