

How to Install:

Installing Capture Direct to Cloud is simple. You need two things: a Capture Advance camera and a Capture Cloud VMS account.

To create a Capture Cloud VMS account, submit the following to ADI Services - ADIservices@adiglobal.com or call 631-692-1586:

- ADI Account Number (that will receive billing for monthly cloud subscriptions)
- First and Last Name
- Email Address
- Phone Number

Once you have an account, follow the steps below:

1. Connect a Capture Advance camera to a network with internet access (leave the camera at default - no need to login or do anything to prepare the camera)
2. Login to your Capture Cloud VMS account
3. Click the three dots in the upper right corner of the Dashboard
4. Select "Add Camera Direct"
5. Enter the Camera Name and MAC Address
6. Click the green "Add Camera" button

A screenshot of a modal window titled 'Add Camera Direct'. The window has a close button (X) in the top right corner. It contains two text input fields: 'Camera Name' and 'MAC Address'. Below the input fields are two buttons: 'Cancel' (orange) and 'Add Camera' (green).

A camera is either added to a bridge/cmvr or as "Camera Direct" to the cloud.
