

The Solution

ADI Cloud Storage powered by Wasabi enables businesses of every size to leverage the benefits of both legacy-deployed IP surveillance systems and cloud storage.

ADI Cloud Storage powered by Wasabi offers multiple solutions to easily extend the capacity of your customer's existing storage based on the Video Management System.

For Video Management Systems with existing cloud connectivity, simply add a cloud storage bucket as an additional archival target within the management console.

For legacy video management systems without cloud connectivity, ADI offers a Windows-based software that automates the ability to offload video to the cloud based on user-defined policies.

- ✔ Simplified purchasing
- ✔ Zero VMS downtime to add a cloud storage target
- ✔ Ability to continue using the VMS/GUI your customers already know
- ✔ Stored in native format

Cloud Storage for Video Surveillance

Easily extend video storage and protect valuable surveillance data with ADI Cloud Storage powered by Wasabi

Benefits Summary

Simplify data management using an existing video management system (VMS)

Use cloud storage for all video data or only specific files/events

Use cloud storage to meet extended retention policies without an additional hardware investment

Lower total cost of ownership (TCO) when cloud storage is included

Experience easy purchasing with the ADI Cloud Storage powered by Wasabi solution

On-premises to cloud simplified

Challenge Summary

The demand for video storage is growing due to increasing camera counts, high-resolution video and prolonged retention policies. These dynamic variables can overload your customer's on-premises storage capacity, accelerate system maintenance and consistently require the purchase of additional storage appliances.

ADI Cloud Storage powered by Wasabi provides an easy-to-deploy and scalable solution, addressing the ever-increasing demand for video storage.

This solution supports industry-leading video management systems in seamlessly replicating video data from on-premises to the cloud. ADI Cloud Storage Powered by Wasabi provides an easy way to purchase and implement a solution without pausing current system operations, simplifying video data management from installation to execution.

ADI Cloud Storage Powered by Wasabi allows you and your customers to gradually migrate to cloud storage while simultaneously leveraging legacy hardware without ripping and replacing or installing proprietary devices.

Incorporating cloud storage into video surveillance systems results in a reliable backup and disaster recovery solution, enabling continuous access to video footage and minimizing downtime. By storing data both locally and in the cloud, your customers can safeguard against hardware failures, on-site damage and cyber threats, supporting uninterrupted system performance and fast recovery when needed.
